STANDARD LEAD SIZES: #24 AWG TCW: up to and including .203" Dia.
#22 AWG TCW: from .204" thru .312" Dia.
#20 AWG TCW: .313" Dia.and over

CAPACITY TOLERANCE: STANDARD . . . ±10% / OTHER . . . from 20% to ±1%
Other values as well as voltage ratings are available upon request.

FEATURES

32P
- Wrap and fill construction
- Excellent long-term stability
- Superior "Q" for tuned circuits
- High insulation resistance
- Linear temperature coefficient
- Quality control procedures per Mil-Q-9858
- Extended foil design

32MPC
- Wrap and fill construction
- Micro-miniature — lightweight
- Low dissipation factor
- Zero TC ±50 ppm/°C from +25°C to +55°C
- Extended foil design
- Excellent stability
- Quality control procedures per Mil-Q-9858

32PL
- Wrap and fill construction
- Excellent long-term stability
- Superior "Q" for tuned circuits
- High insulation resistance
- Linear temperature coefficient (−55°C to +85°C)
- Quality control procedures per Mil-Q-9858
- Extended foil design

APPLICATIONS

32P & 32PL
- Computers
- Data Processing Equipment
- Aircraft and Missile Systems
- Industrial Instrumentation
- Navigation and Distance Measuring Equipment
- Communications Equipment
- Timing and Retrace Circuits
- Integrating Networks
- High "Q" Low Loss Filters
- Peripheral Equipment

32MPC
- Data Processing Equipment
- Aircraft and Missile Systems
- Industrial Instrumentation
- Navigation and Distance Measuring Equipment
- Communications Equipment
- Tachometers
- Filters
- Peripheral Equipment

EXPLANATION OF CATALOG NUMBER

32 M 1002 K-1

32 — Round, Wrap and Fill, with epoxy seals.

M — Mylar-Foil, Axial Leads*

1002 — In Picofarads — first three digits are significant. Last digit specifies number of zeros, i.e., 1002 = 10,000 pfd. or 0.01 mfd.

K — Capacity Tolerance:
K = ±10% H = ±3% F = ±1%
M = ±20% J = ±5% G = ±2%

1 — DC Voltage Rating:
05 = 50 VDC 2 = 200 VDC 6 = 600 VDC
1 = 100 VDC 4 = 400 VDC etc.

***** — For Radial Leads, add letter "R" at end of part number.

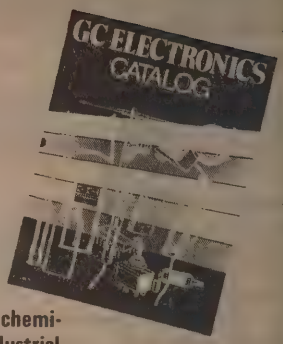
WESCO®

SPECIFY GC ELECTRONICS

For all your Chemical, Tool & Hardware Needs!



GC offers the most complete line of chemicals, tools, hardware and wire available. GC chemicals are being converted to contain no fluorocarbons.

Write for complete GC products catalog, chemical handbook or wire catalog and industrial prices, or call OEM sales 815/968-9661.

DRY KLEEN
Clean contacts, relays and other electronic devices. Leaves absolutely no deposits. Excellent degreaser for inks and gummy deposits on all electrical or mechanical apparatus. Non-flammable.
8669 16 oz. aerosol

RELAY KLEEN
Cleans relays, contacts and other electronic devices where no oily, residual deposits are desired. Excellent degreaser and general solvent for gummy deposits on all electrical or mechanical equipment. Non-flammable; contains no carbon terachloride.
8682 6 oz. aerosol
8682-16 16 oz. aerosol

SPRA KLEEN
Eliminates noise due to dust, dirt and corrosion on electrical contacts. Cleans and lubricates contacts, controls, relays, switches and other sliding contact devices in one fast operation.
8666 6 oz. aerosol
8666-16 16 oz. aerosol

NO–OX
Electronic contact cleaner dissolves corrosion quickly without harsh solvents. Lubricants and protects slide contacts long after application. Recommended for maintenance of volume and tone controls, attenuators, relay contacts, patchboard jacks and similar equipment.
100-02 2 oz. bottle
100-06 6 oz. aerosol

BIG BATH
Cleans and degreases tuners like no other product can. Lossens and blasts away all dust, grime and foreign matter. Safe for plastics and will not detune. Economical 24 oz. aerosol can.
10-903 24 oz. aerosol

JIF
Siliconized contact-control cleaner that cleans and lubricates, plus provides contacts and controls with the longest protection possible. Contains no solvents to harm plastics. Quick - easy to use. Non-flammable.
8670-3 3 oz. aerosol
8670-6 6 oz. aerosol

SILI-SPRA
High quality silicone lubricant! Handy aerosol features exclusive 3-way valve that applies a light lubricating film that lasts and won't leave a residue build-up. Ideal for home, office or workshop.
10-600 6 oz. aerosol

STRIP-X
Enamel stripping compound for the removal of enamel, Formar, Formex, and similar wire insulation coatings. Ideal for thin or stranded wires and wires that cannot be scraped or burned without damage to copper strands.
26-2 2 oz. bottle
26-16 16 oz. bottle

SOLDER FLUX REMOVER
Fast flux removal in a convenient aerosol spray. Excellent for spot flux removal or for removing all types of organic flux. Ideal for prototype work or for on the job use--limits down time. Avoids recontamination of bath method. Safe for use on most circuitry materials. Non-flammable. Low toxicity level.
22-270 16 oz. aerosol

CONDUCTIVE PAINT
Silver-nickel allow conductive paint in acrylic lacquer base. Provides an economical way to draw or repair printed circuits. Possesses good metallic lustre, high conductive and excellent stability in corrsive environments. Also adheres well to glass. Air dries to a hard film. Brush applicator cap.
22-241 ⅛ oz. bottle
22-242 ½ oz. bottle

EXTRA DRY SUPER FREEZE MIST
Cools circuits 3 times faster! Locates bad capacitors, transistors and oxidized joints by instantly cooling components. Non-toxic, odor free, leaves no liquid residue on parts.
10-702 15 oz. aerosol

ZERO MIST CIRCUIT COOLER
Locates "intermittence" in electronic equipment caused by overheating of components. Cools components instantly pinpointing faulty capacitors, transsistors, oxidized junctions.
8667 16 oz. aerosol

	DESCRIPTION	Gauge	Stranding	Insulation Thickness	Nom. O.D.	Wt. lbs/gr per M ft
	SPT-1 Power Cord UL listed. Thermoplastic parallel - jacketed, 2 conductor, light duty cord. PVC insulated. One side ribbed for polarity identification. 300 V AC suggested working voltage. Temperature range - 55°C to 105°C. Brown & ivory	18	41/34	.030"	.110 x .210"	16 lbs/726.4 gr
	Speaker Wire Two conductor transmission cord for loudspeaker connection and other low voltage applications. Temperature range: -20°C to +60°C. 250 V AC suggested working voltage. Tinned one side for polarity identification. PVC insulation. Also available in 16 and 22 gauge. Clear, brown & silver.	24 20 18	7/32 10/30 16/30	.014" .020" .022"	.055 x .116" .078 x .162" .095 x .196"	5.8 lbs/2630 gr 12.3 lbs/5590 gr 15.53 lbs/7050 gr
	**Twin Lead Cable** Two conductor transmission line cable for 300 ohm antenna systems. Designed for use with color or black and white TV, and FM multiplex. Polyethelene insulation -60°C to +80°C. Stranded bare copper cond. material. 80% nom. velocity propagation. 4.4 nom. capacitance (pf/Ft). Nom. Epoxies

- Electrical/Electronic compounds
- High strength structural adhesives
- Double-Bubble® job-size packaged epoxy

Elastomers

- EPOLAST® Elastomer and epoxy technology combined for thermal and physical shock resistance in electrical/electronic and adhesive applications.
- DPR® Liquid natural rubber
- ISOLENE® Liquid synthetic rubber
- KALENE® Liquid butyl rubber
- Flexible mold compounds (RTV)
- Wire and cable sealants

Triplematic® Automatic Dispensing Equipment

- Continuous pour machines
- Shot machines
- Portable mixing heads
- Motionless mixers
- Dynamic mixers
- Automatic and hand portable extruders

Packaging

- Job size, 2-part Double-Bubble® packaging for epoxies, acrylics, urethanes, silicones, etc.

Complete data available on these and other compounds

HumiSeal Coatings

GENERAL CHART

Listed in this General Chart of Properties are ten of the most frequently used HumiSeal Protective Coatings and their principal properties. These have been tabulated in order to facilitate comparison of their characteristics and selection of the most suitable type for a specific application. In addition to these HumiSeal types we manufacture a variety of coatings for special purposes, including high temperature applications. Should none of the coatings listed in this chart fulfill your requirements, we suggest that you contact us for recommendations.

	PROPERTIES OF LIQUID HumiSeal											THERMAL PROPERTIES		
HumiSeal Type[1]	Specific Weight (lbs. per gallon)[2]	Solids Content (% by weight)[3]	Viscosity, with catalyst when applicable (centipoises)[4]	Flash Point (°F)[5]	Drying Time for Handling[6]	Recommended Curing Conditions	Time Required to Reach Optimum Properties	Pot Life, at Room Temperature	Shelf Life, at Room Temperature	Coverage per gallon (in sq. ft.) After One Dip	Mixing Ratio Part A to Part B (By Weight)	Continuous Use Temperature Range (°F)	Thermal Shock Test[7]	Solderability[8]
1B12	7.3	20	30	40	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	550	one component	—75°F to +280°F	Passes	Good
1B15	7.6	35	470	30	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	450	one component	—75°F to +270°F	Passes	Good
1B31	7.6	35	180	30	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	6 mos.	6 mos.	450	one component	—75°F to +270°F	Passes	Good
1A20	8.5	50	120	80	60 min.	24 hrs. at room temp.	1 week	6 mos.	6 mos.	375	one component	—70°F to +250°F	Passes	Excellent
1A27	8.0	50	5000	80	15 min.	24 hrs. at room temp. or 4 hrs. at 170°F	1 week	1 year	1 year	450	one component	—90°F to +250°F	Passes	Excellent
1A33	7.7	44	180	30	15 min.	24 hrs. at room temp. or 4 hrs. at 170°F	1 week	6 mos.	6 mos.	300	one component	—90°F to +250°F	Passes	Excellent
2A64	8.9	55	80	85	4-5 hrs.	3 hrs. at 170°F	1 week	6 hrs.	6 mos.	470	1:1	—70°F to +270°F	Passes	Excellent
2B13	7.5	42	50	40	30 min.	90 min. at 200°F	1 week	24 hrs.	1 year	480	100:2	—70°F to +270°F	Passes	Poor
2A51	9.2	100	6000	non flammable	2 hrs.	24 hrs. at room temp. or 2 hrs. at 200°F	1 week	6 hrs.	6 mos.	200	1:1	—70°F to +250°F	Passes	Poor
2A53	7.8	54	300	70	30 min.	2 hrs. at 200°F	1 week	24 hrs.	6 mos.	400	1:1	—70°F to +250°F	Passes	Poor

HumiSeal TYPES LISTED IN BOLD PRINT COMPLY WITH THE REQUIREMENTS OF MIL-I-46058C

All technical data in this bulletin are based on test results using the stated standards and are believed to be correct. However, since the end use of HumiSeal materials (and the manner of storing and handling them) is beyond our control, we make no warranty — expressed or implied — as to the fitness of use, results to be obtained from or effects of use with respect to these materials. Their use shall be solely by the judgment of and at the risk of the end-user notwithstanding any statement contained in this bulletin.

1. The first digit in the type number specifies whether the product is a one- or a two-component system.
2. Fed-Std 141a, Method 4184.
3. Fed-Std 141a, Method 4044.
4. Fed-Std 141a, Method 4287.
5. Fed-Std 141a, Method 4291.
6. Fed-Std 141a, Method 4061.
7. Mil-I-46058C.
8. Visual evaluation for ease of soldering with an 85 watt iron through a 2 mil film.
9. Fluorescent dye may be added if required.
10. Fed-Std 141a, Method 2121.
11. Fed-Std 406, Method 7031, Procedure A.
12. Fed-Std 141a, Method 6303.
13. ASTM-D150-65T, at 1 MHz and 25°C.
14. Mil-I-46058C Insulation resistance during 10th cycle, at 65°C and 98% RH.

FOR ELECTRONICS

OF PROPERTIES

HumiSeal Protective Coatings are available in one-quart or one-gallon cans, five-gallon pails, or fifty-five gallon drums. HumiSeal types 1B15 and 1A27 are also available in 16-ounce aerosol containers. All HumiSeal types listed in this chart may be applied by dip, brush or spray. Literature on recommended techniques for the proper application of coatings and the preparation of the subtrates is available upon request.

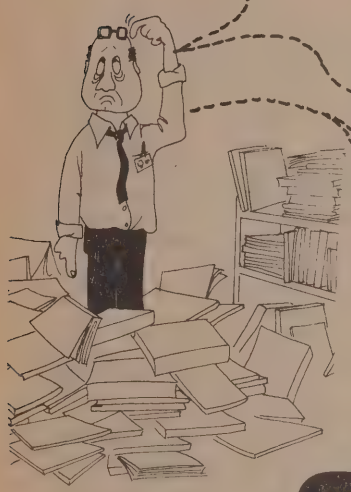
COPYRIGHT

What can I use to keep all the manufacturers' product data I receive in order?

What system makes filing or retrieving manufacturers' catalogs fast and easy?



Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

UNITED TECHNICAL PUBLICATIONS, INC., DIV. OF COX BROADCASTING CORP., 645 STEWART AVE., GARDEN CITY, N.Y. 11530 (516) 222-2500

P.C. BOARDS

We are manufacturers of quality printed circuit boards with many years of experience, and our service has satisfied numerous customers from Coast to Coast.

We are specializers in many diverse industries; such as Medical Electronics, Electronic Security, Instrumentation, Navigational, Aviation, Emergency Lighting, Computers, as well as many others.

With extensive experience, know-how, and modern facilities backing our organization, we are confident that we can supply and fulfill your requirements.

Some of our more general capabilities include:

Single Sided
Double Sided
Plated Thru
Tape Drilling
Pierce & Blanking

Gold Plating
Nickel Plating
Tin Plating
Lead-Tin Plating
Reflow Solder

Whether you have a requirement for prototypes or production quantities, or wish further information, call or write. We are willing and able to serve you.

EVERY PROJECT IS ANOTHER REASON

Design and test circuits as fast as you can think—with CSC Proto-Board® Solderless Breadboards.

As quick as pushing in or pulling out components, you can design, test, and modify all kinds of circuits, with CSC Proto-Boards. Sockets are *already mounted*, on sturdy metal ground/baseplates with non-marring feet. They're great for a wide variety of audio and digital projects, and you save money by using components over and over again.

PB-101—940 solderless tie points: ten 14-pin DIP capacity. 140 five-point terminals plus 8 bus lines of 30 tie-points each. 4.5"W x 5.8"L x 1.4"H (114 x 147 x 35mm); 9 oz. (.26 Kg). Price: $29.95

PB-102—1240 solderless tie points: twelve 14-pin DIP capacity. 188 five-point terminals plus 6 bus lines of 40 tie-points each and 2 bus lines of 30 points. 4.5"W x 7"L x 1.4"H (114 x 178 x 35mm); 10 oz. (.31 Kg). Price: $39.95

PB-6 Kit—630 solderless tie points: six 14-pin DIP capacity. Economical way to get Proto-Board speed and convenience. 94 five-point terminals plus 4 bus lines of 40 tie-points. Comes with pre-assembled sockets, four 5-way binding posts, base-plate, all hardware. 10 minute assembly with pliers and screwdriver. 6"L x 4"W x 1.4"H (152 x 102 x 34mm); 7 oz. (.20 Kg). Price: $15.95

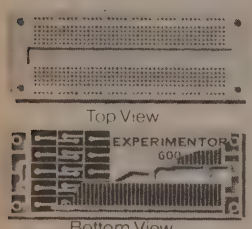
PB-100 Kit—760 solderless tie points: ten 14-pin DIP capacity. 140 five-point terminals plus 2 bus lines of 30 tie-points each. Comes with pre-assembled sockets, two 5-way binding posts, base-plate, all hardware. 4.5"W x 6"L x 1.4"H (114 x 152 x 35mm); 7.5 oz. (.21 Kg). Price: $19.95

EXTRA LARGE CAPACITY FOR MORE COMPLEX CIRCUITS!

PB-103—2250 solderless tie points: twenty-four 14-pin DIP capacity. 354 five-point terminals plus 14 bus lines of 50 tie-points each, plus 2 bus lines of 40 points. 6"W x 9"L x 1.4"H (152 x 229 x 35mm); 1.25 lb. (.57 Kg). Price: $59.95.

PB-104—3060 solderless tie points: thirty-two 14-pin DIP capacity. 472 five-point terminals plus 14 bus lines of 50 tie-points. 8"W x 9.8"L x 1.4"H (203 x 248 x 35mm); 1.75 lb. (.79 Kg). Price: $79.95.

Now, breadboard in any direction! With EXPERIMENTOR™ sockets, the breadboarding system that gives you more flexibility for less dollars!



Sockets lock together, snap apart, to handle any circuit

Arrange EXPERIMENTOR sockets to suit your circuit instead of rearranging your circuit to fit the breadboard.

Discover the ease and convenience of solderless breadboarding. CSC EXPERIMENTOR* sockets let you design, assemble and modify circuits as fast as you can push in or pull out components.

- **Large Capacity**—Large sockets have 550 solderless tie points (94 five-point terminals) plus two 40-point bus strips.
- **Full Fan-Out**—A CSC exclusive. The only solderless breadboard sockets with full fan-out capabilities for microprocessors and other larger (0.6") DIP's.
- **Snap-together in a domino pattern**—Arrange EXPERIMENTOR sockets to suit your circuit. Expand or contract at will.
- **Simple Mounting**—Vinyl insulated backing lets you mount EXPERIMENTOR sockets anywhere without shorting. Mount to any flat surface with 4-40 flat head screws or 6-32F self-tapping screws for behind-the-panel mounting.
- **Accepts All Standard Components**—Sockets conform to 0.1" grid and are DIP compatible. Accepts IC's, diodes, resistors, capacitors, transistors, etc.

Use #22-30 solid AWG wire interconnections.

Proto-Boards with Built-In Regulated Power Supplies!

For extra convenience and breadboarding speed!

PB-203—Same capacity and layout as PB-103, *plus* short-proof, fused 5VDC, 1A regulated power supply. Ripple and noise are a low 10mV at 0.5A. Has on-off toggle switch and pilot light plus four 5-way binding posts (2 for power). 9.75"L x 6.6"W x 3.25"H (248 x 168 x 83mm); weighs 5 lb. (2.27 Kg). For 117VAC, 50/60Hz (220VAC available at slightly higher cost). Price $80.00

PB-203A—All PB-203 features plus separate regulated +15VDC and −15VDC, 0.5A supplies, with internally and independently adjustable output voltage. Same size as PB-203; 5.5 lb. (2.5 Kg). For 117 VAC, 50/60 Hz (220 VAC, 50/60 Hz at slightly higher cost). Price: $129.95

All Prices Shown are Manufacturer's Recommended List.

LOGIC PROBE LP-2

A breakthrough! Fast, safe and accurate digital testing that's very inexpensive.

LP-2 combines the functions of a pulse detector, pulse stretcher and level detector for circuit-powered testing of TTL, DTL, HTL and CMOS. Just set the logic switch to the proper family, connect the power lead clips to the test circuit and touch the probe to the node you want to test . . . for an instant picture of circuit conditions. Pulse LED indicates positive and negative pulse and level transitions, and stretches pulses as narrow as 300 nsec to a full 1/10th sec. HI/LO LEDs display logic "1" and logic "0." A 300K-plus input impedance insures minimum circuit loading. Interchangeable ground leads and probe tips provide ample flexibility to meet any application. LP-2 is the easiest and least expensive way to test, debug and service all types of digital circuits. Price: $24.95.

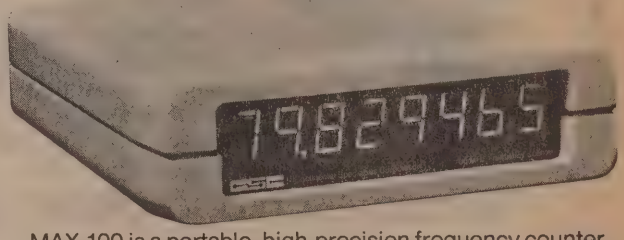
And don't forget our LP-1 and LP-3, for memory and high-speed circuit applications.

LP-1 does everything that LP-2 does, with the addition of MEMORY to store single-shot and low-rep-rate events, plus the ability to stretch pulses as narrow as 50 nsec. Price: $44.95. *LP-3* gives you the features of LP-1 and -2 plus super-speed capability to handle pulses as fast as 10 nsec. Price: $69.95.

MEET MAX-100

CSC's 100 MHz 8-digit Audio/CB/RF/Digital counter. At $134.95, nothing else does so much for so little.

- **MAXimum frequency range—20Hz-100MHz**
- **MAXimum CB performance—ideal for CB applications**
- **MAXimum visibility—big, bright, 0.6" 8-digit LED display**
- **MAXimum accuracy—crystal-controlled timebase**
- **MAXimum operating ease—automatic, no controls to set**
- **MAXimum range of applications—use for audio through ultrasonic through RF: AM, FM and digital**
- **MAXimum portability—completely self-contained**
- **MAXimum flexibility—choice of four power sources**
- **MAXimum versatility—use with clip-lead cable, in-line tap, mini-whip antenna, etc.**



MAX-100 is a portable, high-precision frequency counter that sets new standards in performance and value. In a compact, portable case, it gives you *continuous readings* from 20Hz to a *guaranteed 100MHz*, with 8-digit accuracy. Fast readings with 1/6-sec. update and 1-sec. sampling rate. Precise readings, derived from a crystal-controlled time base with 3ppm accuracy. High-sensitivity readings from signals as low as 30 mV, with diode overload protection up to 200V peaks.

Input signals over 100MHz automatically flash the most significant digit. And to indicate low-battery condition and extend remaining battery life, the *entire* display flashes at 1 Hz. Price: $134.95

SPECIFICATIONS

Range: 20 Hz to 100 MHz, guaranteed. **Gatetime:** 1 sec. **Resolution:** 1 Hz. **Accuracy:** ± 1 count + time base error. **Input Impedance:** 1 MΩ/56pF. **Coupling:** AC. **Sine Wave Sensitivity:** 30 mVRMS @ 50 MHz. **Internal Time Base Frequency:** 3.579545 MHz x tal osc. **Setability:** ± 3 ppm @ 25°C. **Temp-Stability:** Better than 0.2 ppm/°C, 0-50°C. **Max. Aging:** 10 ppm/year. **Display:** Eight .6" LED digits. **Lead-zero blanking:** decimal point appears between 6th and 7th digit when input exceeds 1 MHz. **Overflow:** with signals over 99,999,999 Hz, most significant (left hand) digit flashes, allowing readings in excess of 100 MHz. **Display update:** 1/6-second plus 1 sec. gate time. **Low Battery Indicator:** When power supply falls below 6.6 VDC, all digits flash @ 1 Hz. **Power:** 6 AA cells (internal); **External:** 110 or 220 VAC Eliminator/charger; Auto cigarette lighter adapter; 7.2-10VDC ext. supply; **Bat. Charging:** 12-14hr. **Size (HWD):** 1.75" x 5.63" x 7.75" (4.45 x 14.30 x 19.69cm.) **Weight:** Less than 1.5 lb. (0.68 Kg) w/batteries.

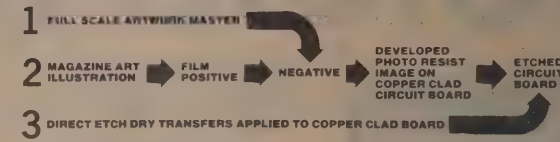
printed circuit kits••• DATAK

new photo etch kit ..... *Makes printed circuits THREE WAYS*

Duplicate industrial techniques to make one or hundreds of identical printed circuits. Remarkable **POS-NEG**™ (pat. pend.) system will photocopy 1:1 art directly from a magazine page. Make 1:1 artwork masters, negatives, positives. Sensitize ordinary copper clad circuit boards: use your negative to expose; then develop and etch the final circuit. **No camera. No darkroom.** No tracing, pasting or film cutting. All materials supplied except photoflood bulb available at any camera store.



1 FULL SCALE ARTWORK MASTER
2 MAGAZINE ART ILLUSTRATION
FILM POSITIVE
NEGATIVE
DEVELOPED PHOTO RESIST IMAGE ON COPPER CLAD CIRCUIT BOARD
ETCHED CIRCUIT BOARD
3 DIRECT ETCH DRY TRANSFERS APPLIED TO COPPER CLAD BOARD

ER-4 COMPLETE PHOTO ETCH KIT **$27.95**

direct etch printed circuit kit

This one step kit uses a unique dry transfer resist that etches razor-sharp patterns. Lay out circuits directly on the copper board by rubbing down dry transfer patterns and lines. Connect with resist tape or leave unconnected for breadboards. Blow-up illustration shows 2 oz. copper circuit board **made only with materials in kit.** Black dry transfer resist is partly removed to show etched copper. Pattern is .015" squeeze-through wire transferred between 2 DIP pads. Pad edges are spaced .030" apart.

KIT CONTAINS: two 3"x4½" and two 2¼"x3" copper clad boards, 8 sheets direct etch PC patterns, 2 rolls PC resist tape (see ER-2 for description of patterns and tape), ¼ lb. anhydrous ferric chloride (makes 1 pint), combination storage box and etch tray, instructions.

ER-1 COMPLETE DIRECT ETCH KIT **$6.95**

photo etch and direct etch printed circuit refill kits

DRY TRANSFER ETCH RESIST SETS

8 sheets 3"x5" 1:1 patterns include lines, circles, jogs, squeeze-throughs, TO-3 & TO-18 transistors, TO-99, TO-100, DIP & flatpack ICs, donut pads, roll of 1/16" and 1/32" resist tape. Withstands ferric chloride, ammonium persulfate, peroxide and other etch systems.

ER-2 DRY TRANSFER ETCH RESIST ASST. **$3.95**

4 sheets assorted resist donuts 1/16" through 1/4" dia. All have .025" diameter center hole.

ER-13 RESIST DONUT PADS **$2.29**

4 sheets DIP and flatpack patterns. Continuous strips let you transfer 8, 14, 16 or any number of perfect pad patterns.

ER-14 RESIST DIP PATTERNS **$2.29**

24 sheets continuous DIP patterns with through traces. Use with or without traces for etch resist or 1:1 master art.

JD-174 RESIST DIP PATTERNS WITH TRACES **$7.49**

24 sheets continuous edge card connector patterns.

JD-122R 24 strips each of .156" & .125" FINGERS . **$7.49**
JD-168 24 strips of .100" SPACED FINGERS. **7.49**

ETCH RESIST PEN

"Write" your circuit down on copper. This felt pen has ink that is impervious to aqueous PC etch solutions.

ER-15 ETCH RESIST PEN **$1.49**

DRY CONCENTRATED ETCHANT

¼ lb. anhydrous ferric chloride in vapor tight package makes 1 pint etchant, enough for 200 sq. in. of copper board. Costs less than liquid etch solutions.

ER-3 DRY CONCENTRATED ETCHANT **$1.69**

POS-NEG™ PHOTOCOPY FILM

Polyester base film makes negatives or positives directly from opaque or translucent art in one step. Handle in subdued light. Expose with #2 photoflood.

ER-5 SIX SHEETS 5"x6" POS-NEG FILM **$4.29**
ER-9 TWO SHEETS 8"x11" POS-NEG FILM **4.29**

FILM PROCESS CHEMICALS

3 chemical packets make 1 pint litho film developer and 1 pint acid fixer. Handles 15 sheets copy film.

ER-6 FILM PROCESS CHEMICALS **$1.95**

PHOTO RESIST SPRAY

Photosensitive PC board coating. Unexposed coat is dissolved by resist developer. Exposed areas remain to act as an etch resist. Coats up to 400 sq. in.

ER-7 PHOTO RESIST SPRAY (2.5 oz. net wt.) **$2.95**

PHOTO RESIST DEVELOPER

Solvent blend develops exposed photoresist. Use with ER-7 spray resist.

ER-8 RESIST DEVELOPER (16 fl. oz.) **$2.95**

9"x12" CONTACT PRINT FRAME

Make negatives or film positives with patented Pos-Neg system. Steel frame assembly, yellow filter, instructions.

ER-10 PRINTING FRAME **$9.95**

POWER ETCH PUMP

Circulates etchant to speed etch rate. Contains air pump, coupling hose, perforated distributor tube, instructions.

ER-12 POWER ETCH PUMP **$6.95**

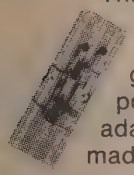
Solder is for sissies.

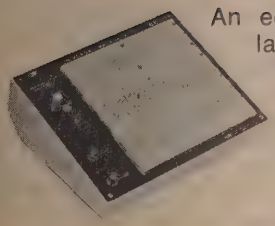
Are you still designing circuits the old fashioned way? Soldering and unsoldering? Burning up valuable IC's? If so, it's time you made a switch to solderless breadboarding. E&L Instruments offers a complete line of breadboarding products from sockets to the most complete systems for professional use. Here are five ways you can go solderless . . .

SK-10 Socket



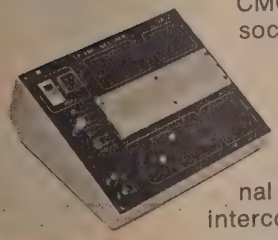
This precision solderless breadboarding socket will pay for itself in one afternoon. Integrated circuits and discrete components insert directly, without adapters. All interconnections are made with 20 to 26 gage solid conductor wire. $17.75.

Breadbox III



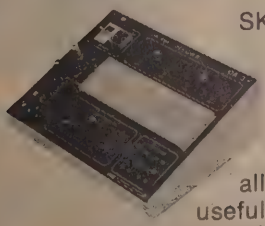
An economical approach to a large breadboarding area. Three SK-10 sockets, four 5-way binding posts, two BNC connectors, six BP-22 solderless breadboarding pins. $72.25

Op-Amp Designer #OA-2K



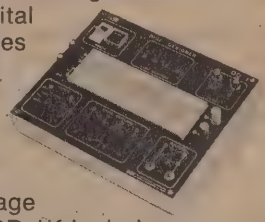
Powerful design tool for linear work and CMOS digital circuitry. SK-10 socket. Heavy current capacities on all three power supplies [+/– 15V & +5V DC]. Sensitive null detector and a full function generator with external frequency adjustment. All interconnections are solderless. $120.00 in kit form.

Op-Amp Designer #OA-3K



SK-10 socket. Plus and minus variable supplies (1 to 15V). This adjustable feature makes the unit exceptionally flexible, allowing it to be more useful for odd voltage requirements. The fixed 5 volt supply allows interfacing with TTL circuitry. $102.50 in kit form.

Digi-Designer #DD-1K



A must for every student, engineer or technician doing digital circuit design. Handles both IC and discrete components without soldering. Connections to the SK-10 socket are made using any solid 22 gage insulated wire. The DD-1K includes a clock, power supply, logic lights, pulsers, logic level switches and much more. All circuitry is now in one circuit board. $77.75 in kit form.

OEM and educational discounts available. All prices shown are suggested resale U.S.A.

UNITED

SOLDER-WRAP® Packaging Technology

SOLDER-WRAP® is a high density interconnect system offering low front end cost, no artwork generation, fast engineering turn around, field changeability, and realistic production cost. With SOLDER-WRAP®, interconnect costs have been brought back in line with semiconductor costs. This unique electronics system forms interconnects at speeds two to three times faster than conventional wiring methods. Routing speed including soldering time, range from 350 to 1200 W.P.H. on the automatic equipment.

The SOLDER-WRAP® process consists of routing a fine insulated wire to the various protruding pins of components previously inserted into a specially patterned PC board. The individual wires and components leads are then soldered to the PC pads by a soldering probe, which simultaneously thermal strips away the wire insulation at the soldering area.

UNITED WIRING & MANUFACTURING CO. SOLDER-WRAP® INTERCONNECT PROCESS COMPARISON CHART

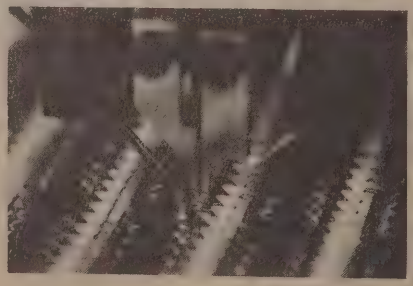
Process	Requires Artwork	Engineer Design	Engineer Changes	Density	Production Cost	Field Changeable	Prototype Process	Schottky Logic	ECL Logic
Two Sided Boards	Yes	6-10 Wks. Long	Artwork Changes	Low	Low	Poor	Very Poor	Poor	Poor
Multi-Layer Boards	Yes	10-12 Wks. Long	Artwork Changes	High	High	Very Poor	Very Poor	Good	Very Good
Wire-Wrap	No	2-4 Wks. Short	No Artwork	High	High	Good	Good	Fair	Fair
Stitch Weld	No	2-4 Wks. Short	No Artwork	High	Medium to High	Fair	Good	Fair	Fair
Two Sided SOLDER-WRAP®	No	2-4 Wks. Short	No Artwork	High	Low to Medium	Good	Very Good	Good	Fair
Multi-Layer SOLDER-WRAP®	No	2-4 Wks. Short	No Artwork	High	Medium	Good	Very Good	Very Good	Very Good

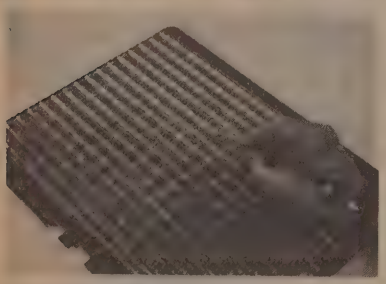
WHEN SHOULD SOLDER-WRAP® BE CONSIDERED FOR YOUR PACKAGING NEEDS?

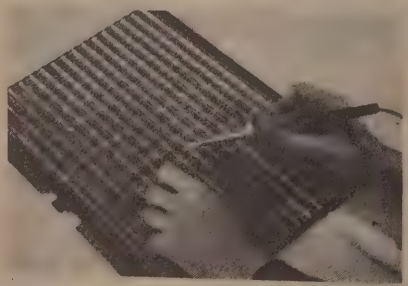
- **Front End Design (New Products)**
- **Replacement Wire-Wrap Boards**
- **Replacement Stitch-Weld Boards**
- **Replacement Multilayer Boards**
- **ECL Logic & TTL Schottky**
- **High Density Packaging Fan-Fold**

Advantages for SOLDER-WRAP® users include high surface and cubic density, fast engineering turn around, low front end tooling and testing costs and ease in changeability. As an example, the front end cost for a 40 position SOLDER-WRAP® board would run $308 including coding, keypunching and computer runs. Compare SOLDER-WRAP® with other processes in the chart in figure 1. SOLDER-WRAP® advantages can mean substantial savings for your operation in both time and money.

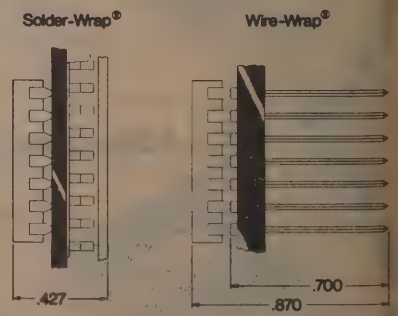
Some of the companies now using SOLDER-WRAP® are Texas Instruments, McDonnel Douglas, Collins Radio, Bell Labs, Westinghouse, L.T.V. Systems, E-Systems, Control Data, Univac, I.B.M., Bendix, Motorola, Cubic Western Data, Data West Corp., Jet Propulsion Laboratory, E.G.&G., Integrated Data Systems, Western Geophysical Div. Litton Resources, Teledyne Systems, Diebold, Schlumberger, Bell Helicopter, and Norand.







Manual or automatic — SOLDER-WRAP® offers fast, low cost, highly reliable interconnections and quick, easy changeability. Whether for prototyping or high volume production, SOLDER-WRAP® fills your high density interconnect needs.



SOLDER-WRAP®'s low profile increases cubic component densities — lowers packaging costs. Compare with Wire-Wrap profile.

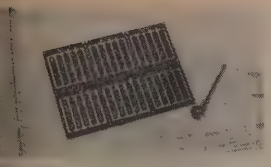
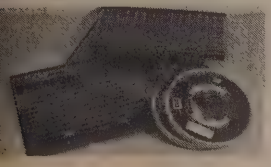
SOLDER-WRAP® Applications and Services

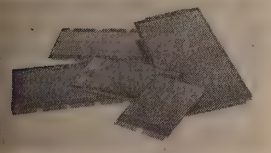
UNITED



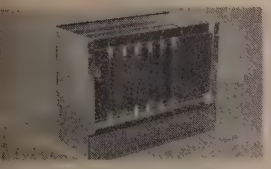
SOLDER-WRAP® Prototyping Kits and Tools — Extensive array of SOLDER-WRAP® boards and tools for breadboarding, building engineering prototypes, or making repairs to production SOLDER-WRAP® modules. See **eem** pages 1302 and 1303.



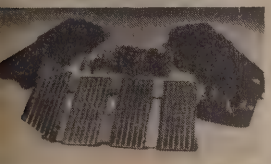
High Density Dual In-Line Packaging for T²L Logic using United's existing SOLDER-WRAP® circuit cards. Nearly any combination of IC capability, I/O configuration, and board size possible without front end artwork time delays. See **eem** page 1304.



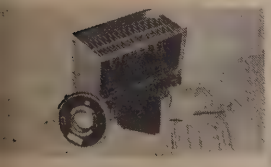
Mini and Microcomputer Interfacing through SOLDER-WRAP® I/O cards designed for accurate mechanical and electrical compatibility with most major systems. Implement your logic thru SOLDER-WRAP®. See **eem** page 1305.



SOLDER-WRAP® Backplane and Card Cage Systems, a new product line for 1978, offers high density packaging along with the high reliability and low connection costs of SOLDER-WRAP®. See **eem** page 1306.



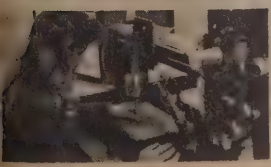
High Reliability in High Density Fan-Fold Packaging. Package up to 450 ICs with no connector interfacing. Integral power supply and forced air cooling make Fan-Fold the industry's newest packaging concept. See **eem** page 1307.



Total System Configuration with SOLDER-WRAP® Technology. Let United implement your logic design thru SOLDER-WRAP®. Given your specifications United's professional staff provides total system design from populating ICs on boards all the way to final testing of a completed functioning SOLDER-WRAP® system. See **eem** page 1308.

Production SOLDER-WRAP® wiring service for four boards or four thousand. United offers quick turn around, short front end design times and low connection costs. Artwork and software pricing in this section also. See **eem** page 1309.

Automatic SOLDER-WRAP® machinery will equip your facility for in-house SOLDER-WRAP® wiring. Reliable equipment, engineered and manufactured for precise positioning and low maintenance. Optional functions available also. See **eem** page 1310.



SOLDER-WRAP® Twisted Pair Wiring for ECL Circuitry. United now offers complete ECL capability with semi-automatic or manual twisted pair stringing, 3 layer boards with imbedded ground planes and twisted wire kits for prototyping. See **eem** page 1311.

UNITED WIRING & MFG. CO.

UNITED

SOLDER-WRAP® Prototyping Kits & Tools

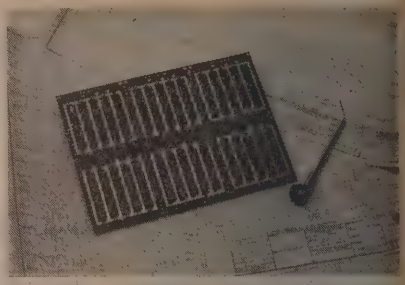
Prototype kits offered by United Wiring & Manufacturing Company are offered in a complete progression of sizes and are designed for use with all SOLDER-WRAP® boards as well as other manufacturers breadboards.

Each kit is designed around United's patented manual wire stringing tool which enables up to 300 connections to be made per hour, including soldering time. SOLDER-WRAP® prototype kits serve a triple purpose:

- **Breadboarding in your lab**
- **Making repairs in the field**
- **Complete functioning engineering prototypes**

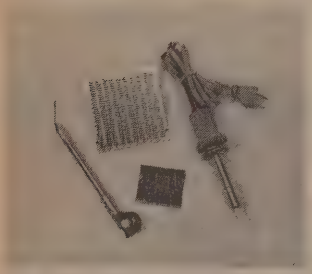
Using SOLDER-WRAP®, connections are made by stringing a continuous, unbroken wire from the beginning of a net to the end, connecting each common point along the way. With only one wire at each soldered connection, initial breadboarding, as well as subsequent changes, is effected quickly, neatly, and accurately. Using SOLDER-WRAP®, even breadboarding directly from logic diagrams becomes faster and greatly reduces wiring errors.

Whether used as introduction to the SOLDER-WRAP® method of interconnection or as a continuing design tool for your engineers and technicians, SOLDER-WRAP® prototyping capability can cut breadboarding time by 50% over



wire-wrapping and up to 75% over hard wire/soldering.

All kits and tools shown here are stocked for immediate delivery. Also refer to the following pages for United's wide assortment of off the shelf SOLDER-WRAP® boards.



SOLDER-WRAP® Starter Kit — Designed for initial experimentation with the SOLDER-WRAP® process.
Part Number 150-0100-001

SOLDER-WRAP® E.C.O. Kit — For making engineering changes on 2-sided boards and wiring on Vector and Vero breadboards.
Part Number 150-0105-001

SOLDER-WRAP® Special Tool Kit — Kit contains all special tools required for SOLDER-WRAP® prototyping.
Part Number 150-0110-001

Industrial SOLDER-WRAP® Prototype Kit — Our most complete prototype kit. The handsome attache case provides portability and contains an abundant supply of wire cartridges and other equipment for industrial applications.
Part Number 150-0115-001

Manual Stringer — Stainless steel, well balanced with adjustable wire tension.
Part Number 150-0120-001

Polyurethane/copper wire for stringer.
30 ga. P/N 150-0120-002 R(G)
34 ga. P/N 150-0120-003 R(G)
36 ga. P/N 150-0120-004 R(G)
38 ga. P/N 150-0120-005 R(G)
Specify red or green.

Soldering Unit — 42 Watt, 120 VAC 750°F.
P/N 150-0120-006 (2 wire)
P/N 150-0120-007 (3 wire)

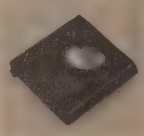
Solder Tips — Special shape allows ease of soldering.
P/N 150-0120-008

IC Insertion Tool — Guides and inserts IC's without damaging leads.
P/N 150-0120-009

IC Lead Bender — Properly bends IC leads for SOLDER-WRAP® wiring.
P/N 150-0120-010

Wire Cutter — For isolating networks on SOLDER-WRAP® boards.
P/N 150-0120-011

Continuity Tester — Audible signal — battery included.
P/N 150-0120-012



5X Magnifier — Lighted — excellent for inspection of connections.
P/N 150-0120-013

Twisted Pair Wire — For ECL and all high speed wiring using twisted pairs (red twisted with green).
P/N 150-0120-014 34 ga.
P/N 150-0120-015 36 ga.
P/N 150-0120-016 38 ga.

ORDERING INFORMATION SOLDER-WRAP® BOARDS

Part Number Construction Is As Follows

XX — XXXX — XX

A B C

A. First two digits define type of board
   LP = Low Profile Dip Socket commercial and Mil grade
   NS = SOLDER-WRAP® board without sockets
B. These four digits define basic board number
C. These two digits define SOLDER-WRAP® back covers
   -00 = No SOLDER-WRAP® back cover
   -01 = SOLDER-WRAP® back cover, styrene material
   -02 = SOLDER-WRAP® back cover, FR4 material

NOTES

1. Dimensions for 0258 board are for 1 section only (4 x 5 sections shown). Indicate number of patterns W by number of patterns H when ordering, max. = 5 wide (W) by 4 high (H).
2. All boards contain UWM wiring channels, installed.
3. Minimum board to board spacing for backplane insertion:
   NS .500 in C-C
   LP .600 in C-C
4. Mating card cage available.
5. All SOLDER-WRAP® boards meet the following specifications:

Laminate	MIL-P-13949
Plating	QQ-S-571, MIL-G-45204, QQ-N-290
Fabrication	Mil-Std-275 (MIL-P-55110 on request)
Artwork/Design	Mil-Std-100, MIL-D-1000

6. Complete price list available upon request.

UNITED WIRING & MFG. CO.

UNITED

High Density IC Packaging For TTL Logic

Commit your proven circuitry to production quickly by using one of United's high density SOLDER-WRAP® board designs. Save artwork generation lead time, costs and design errors. Existing designs offer packaging capacities from 25 to 225 16 pin ICs. Many variations in I/O configuration to interface with your existing system. Also, complete mating SOLDER-WRAP® backplane card cages for a wide range of plug-in boards.

Table below shows specs on but a few of United's nearly 100 board designs available for your immediate SOLDER-WRAP® application.

Contact United Wiring & Mfg. Co. for additional specifications and complete pricing information.

UNITED WIRING & MFG. CO.

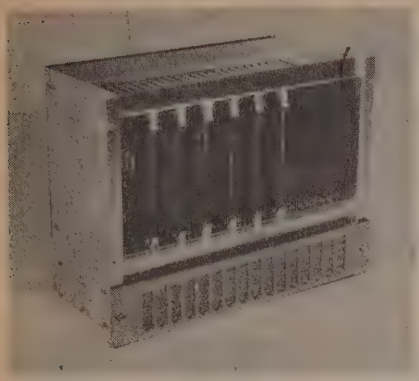
UNITED — SOLDER-WRAP® Backplane & Card Cage Systems

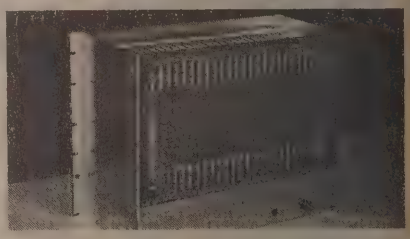


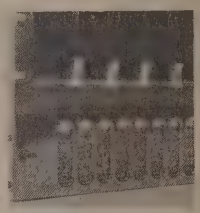
Total SOLDER-WRAP® system capability is now available by designing around United Wiring & Mfg. Co.'s new line of card cage and backplane systems. Offered in three basic sizes, with total chip capacities ranging from 1700 to 5800 chips, United's card cages accept 26 plug-in boards, each board having total IC capacity of from 66 Model (510-0105) to 225 (Model 510-0115) ICs per board.

Card cages are designed to fit standard 19" panel openings and are rigidly constructed for maintaining proper card positioning and connection integrity.

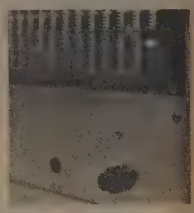
Each basic series comes optionally with a forced air cooling package pulling 180 cfm through a permanent washable filter.

SOLDER-WRAP® backplanes and plug-in boards may be wired automatically or manually and systems may be ordered with any available number of plug-in cards and external I/O connectors.

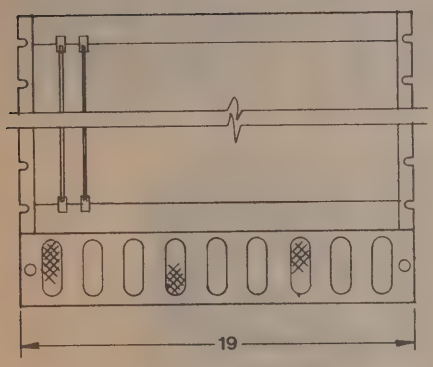


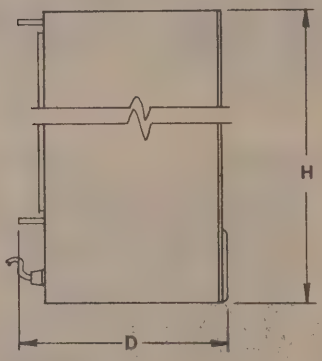


Removable Permanent Air Filter



Fused 110 VAC





ORDERING INFORMATION

XXX — XXXX — XXX — X

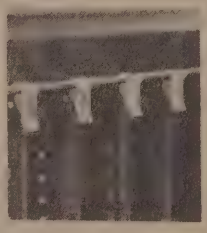
510-0136	26	5850	21.0	13.5	Yes	700-0150-100

NOTES

1. Backpanel boards are .125 thick, Plug-in boards are .062 thick. See prototype section for specs on all SOLDER-WRAP® boards.
2. Edge connectors — glass filled Diallyl Phthalate with Phosphor bronze contacts, nickel-gold plated. Contacts rated 5 ADC @ 25°C, 500 VDC Insertion force — less than 5 oz. (142 gm)
3. External I/O thru 50 pin flat ribbon header (maximum 8 per card cage)
4. Card cage material — steel and aluminum, anodized and bright cadmium plated for protection.
5. Center to center board spacing .600 in.



Custom position symbolization available on request.

Extractors provide easy, safe insertion and extraction of cards.

Reliable ribbon able I/O for cage to cage interconnection.

High Reliability DIP Packaging With SOLDER-WRAP® Fan-Fold

UNITED

SOLDER-WRAP® Fan-Fold — A New Interconnect Process Designed To Eliminate Backpanels And Cut Production Costs.

Fan-Fold offers several advantages over conventional backpanel and card cage systems. The main highlights of Fan-Fold packaging are **high density, improved reliability, reduced production cost, and no limitation of in and out connections** from board to board. Automatic SOLDER-WRAP® machinery handles up to five 4.5″x16″ Fan-Fold boards. The machine treats the five boards as one large board, 22.5″x16″.

Flexible copper clad mylar is used to connect all the Fan-Fold boards into one continuous foldable assembly. This same copper clad mylar carries the ground plane from board to board.

The machine connects directly from one IC lead on one board to any other IC lead on any of the five boards. Once the SOLDER-WRAP® process has wired and soldered all five boards, a special 3M® tape is applied on wires crossing from board to board. This will adhere the wires to the copper clad mylar over the ground plane.

The design effort to package circuits on the Fan-Fold process is greatly reduced due to the elimination of partitioning of logic. **There is no limitation on the number of in and out signals from board to board.**

The production cost can be as much as 20% less than a conventional two sided printed circuit board system.

Fan-Fold also adapts well to TTL Schottky and ECL logic applications using SOLDER-WRAP® twisted pair wire. Interruptions of signal transmission due to card edge connectors can now be a problem of the past.

	Ordering Information

UNITED WIRING & MFG. CO.

UNITED — Total System Configuration With SOLDER-WRAP® Technology

United Wiring and Manufacturing Co. offers a complete system design and fabrication service using our broad line of SOLDER-WRAP® packaging schemes and products.

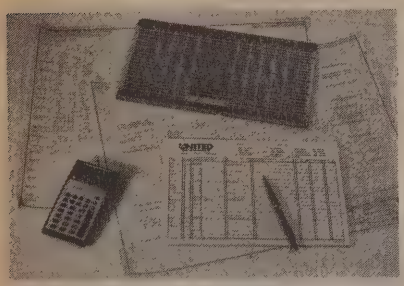
Professional experience, a well equipped facility and a thorough approach to engineering and production combine to provide your firm with the reliable product and turn around times required.

Whether using standard existing SOLDER-WRAP® cards, designing custom cards to your specs, building around a SOLDER-WRAP® solution to your design problem.

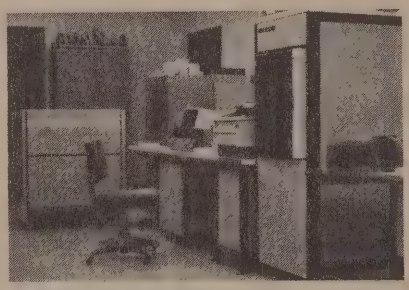
United's sophisticated software package analyzes your logic input, optimizes wire routing and points out design errors and conflicts in a thorough documentation package.

Necessary artwork to create special SOLDER-WRAP® boards can be created quickly and accurately using computer aided design techniques. Special power and ground layers, non-standard components, and custom board I/O are adapted where needed. And of course, low cost, highly reliable, self-testing, high speed SOLDER-WRAP® wiring keeps costs down and production up.

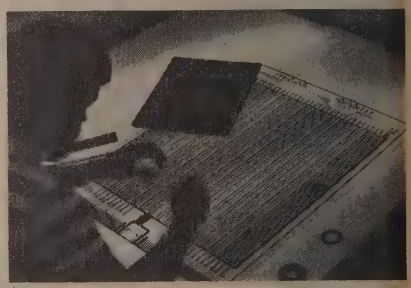
Whether it be an engineering prototype, low volume production, contract wiring services, or total systems delivery, put United Wiring and Mfg. Co. and SOLDER-WRAP® on your production team.



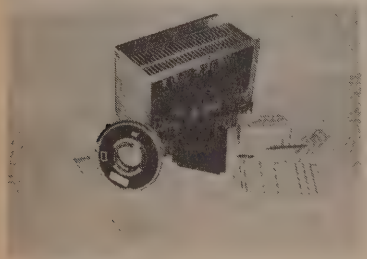
Logic is partitioned, pins assigned and signal data converted into input form for software operation.



In-house EDP capability provides documentation package and command data for automatic SOLDER-WRAP® machines.



Existing boards or custom SOLDER-WRAP® artwork — accurate, professional design.



SOLDER-WRAP® Total System Application.

SOLDER-WRAP® ARTWORK DESIGN & BOARD TOOLING

	1-50 ICs	51-100 ICs	101-300 ICs
Artwork Generation	$500.00	$770.00	$890.00
P.C. Tooling	270.00	395.00	495.00
Total	$770.00	$1095.00	$1385.00

*2 side A/W for TTL circuitry. A/W for Schottky or ECL applications quoted on request.

SOLDER-WRAP® SOFTWARE COSTS

1. Populating ICs for Board Layout incl. 2, 3, 4 below ..... $12.00 per IC
2. Coding Schematic, Keypunch, Computer Run, and Documentation Package* ..... $7.70 per IC
3. Keypunch, Computer Run, and Documentation Package ..... $4.50 per IC
4. Computer Run and Documentation Package .... $3.22 per IC
5. Conversion of existing SOLDER-WRAP* assembly to 2 sided or multilayer artwork ..... Prices on Request

*SOLDER-WRAP® documentation package includes listing of signal data by device pin and signal name. Also parts list and device location list.

SOLDER-WRAP® Wiring Services

Low Volume Wiring

One SOLDER-WRAP® Board	15 Cents per Wire
Two SOLDER-WRAP® Boards	14 Cents per Wire
Three SOLDER-WRAP® Boards	13 Cents per Wire
Four SOLDER-WRAP® Boards	12 Cents per Wire

SOLDER-WRAP® Contract Wiring Service — 12 Month Usage

100K to 200K Wires	10 Cents per Wire
200K to 300K Wires	9 Cents per Wire
300K to 500K Wires	8 Cents per Wire
500K to 1MM Wires	7 Cents per Wire
1MM to 2MM Wires	6 Cents per Wire
2MM to 5 MM Wires	5 Cents per Wire
5MM to 10MM Wires	4.5 Cents per Wire

Miscellaneous Components and Services

1. Burndy dual In-Line, low profile sockets available in 8, 14, 16, 18, 20, 22, 24, 28, and 40 pin configurations, either commercial or Mil grade.
2. Ceramic disc capacitors for decoupling; .01 MFD and 0.1 MDF. Order by description.
3. Insertion of components.
4. Snap-on protective covers for any SOLDER-WRAP® board.

Prices available on request.

United Wiring & Mfg. Co. Wire Wrap Prototyping Kit

Pre-stripped 30 AWG Kynar or MIL-ENE wire-wrap wire packaged in 9 different lengths. Available in 10 different insulation colors as shown and kits are stocked for immediate delivery. Lengths shown are insulation lengths; for total length of each wire add 2.0".

Wire Lengths and Quantities

Length	No. in Kit
1 in. (25.4 mm)	3000
2 in. (50.8 mm)	2000
3 in. (76.2 mm)	1000
4 in. (101.6 mm)	1000
5 in. (127.0 mm)	500
6 in. (152.4 mm)	350
7 in. (177.8 mm)	350
8 in. (203.2 mm)	350
9 in. (228.6 mm)	350

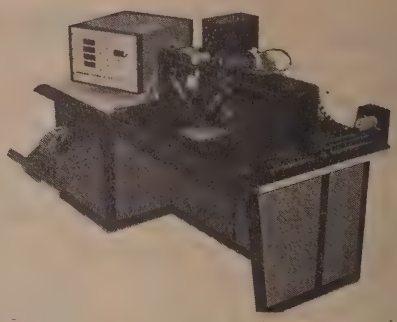
UNITED WIRING & MFG. CO.

UNITED

Automatic SOLDER-WRAP® Machinery



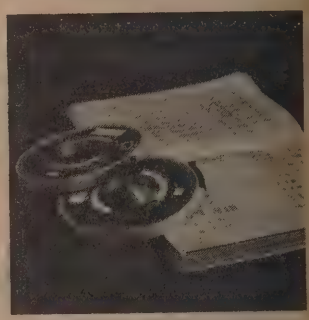
Automatic SOLDER-WRAP® interconnect equipment may be leased or purchased from United Wiring and Manufacturing Company, Inc. This equipment performs all wire routing, cutting and soldering functions and checks for errors.

The decision to lease, purchase or use United's in-house wiring capabilities should be based on your needs. If your volume is small, United can perform your wiring services for you at a savings of 20% to 30%. If your shop deals in medium to large volume, a 50% savings can be effected with leased or purchased equipment. For example, equipment wiring costs in a single shift operation would be approximately 3 cents per wire.

A computer system generates the engineering documentation package and a disc or paper tape to drive the automatic SOLDER-WRAP® equipment. An operator with two to three weeks training can effectively man the SOLDER-WRAP® equipment. Additional training is required to operate the engineering documentation package for the software system.

Either way, United's in-house service, or using SOLDER-WRAP® equipment in your own plant, means total reliability plus a 30% to 50% cost savings for you.

Equipment	Stringing — Conn. Per Hour	Soldering/Cutting — Conn. Per Hour	Avg. Wires — Per Hour	Cost Per Wire — One Shift
Model 100	1100	1000	350 W.P.H.	.03 Cents
Model 400	4200	4000	1000 W.P.H.	.025 Cents



Stringing, soldering, and cutting operations, performed automatically and accurately on SOLDER-WRAP® machinery.

SOLDER-WRAP® documentation package — special software available for most EDP systems.

Optional Functions Available

Optional functions are now available for the Model 100 SOLDER-WRAP® machine, making it a completely versatile production tool.

Wire-Wrap Option — 300 wires per hour and up can be wrapped using the 100 as a semi-automatic wire-wrap system. Digital displays indicate wire numbers and lengths, while the positioning mechanism guides the operator to the points to be wired.

SOLDER-WRAP® Twisted Pair Option — Equipped with the SOLDER-WRAP® twisted pair tool, the Model 100 can effect up to 200 twisted pair connections per hour. These transmission lines of 50-55 ohms impedance facilitate ECL circuitry without complex multi-layer circuit boards.

Component Insertion Option—A ten minute changeover from SOLDER-WRAP® to a light pointing mechanism and the Model 100 becomes an efficient component insertion tool. Component numbers or part bins are indicated on the displays providing quick component selection.

SOLDER-WRAP® Twisted Pair Wiring For ECL Circuitry

UNITED

SOLDER-WRAP® TWISTED PAIR

Twisted pair SOLDER-WRAP® will enable engineers to use ECL 10K/100K logic without laying out 8 to 10 layer PC boards for generation of transmission lines. The SOLDER-WRAP® twisted pair process utilizes a four-layer SOLDER-WRAP® board which will have imbedded power and ground planes in the two inner layers and the component and wiring surfaces on the outside layers. **The SOLDER-WRAP® twisted pair** will exhibit a 1.5 nano second propagational delay per foot of twisted pair wire. This holds true for 34, 36, and 38 gauge wire.

The characteristic impedance exhibited by 34, 36, and 38 gauge wire is 50, 53, and 56 ohms respectively. (Refer to TDR sampler readouts below). The SOLDER-WRAP® twisted pair tool is controlled by the Model 100 SOLDER-WRAP® machine and twists 8 to 10 turns per inch.

The light pointer on the Model 100 will indicate wire routing and also indicate whether a signal or ground wire should be connected to the IC patterns on the SOLDER-WRAP® ECL board. **The Model 100 machine** will automatically solder and cut the wires at an over all rate of approximately 200 wires per hour. The twisting operation on the twisted pair tool is controlled by a stepping motor which is in synchronization with the travel speed of the light pointing system.

SOLDER-WRAP® Twisted Pair Tool for manual operation. Speed control adapter comes with tool.

UNITED WIRING & MFG. CO.

VECTORBORD®, MICROVECTORBORD®

Vectorbord® and **Micro-Vectorbord®** prepunched terminal boards are time, work and money saving materials used throughout the electronic industry. Fire retardant material is precision punched in a wide variety of sizes, hole patterns, and thicknesses for later installation of terminals and components. Vector terminals in solder and wrapped wire models are available to fit all hole sizes. Pattern "A" or "AA" is good for experimental or other work where space is not critical. Pattern "B" is useful for work with small components such as resistors and capacitors. Pattern "G" is particularly useful for transistor usage. Pattern "H" and "P" are specially designed for use with integrated circuits and devices packaged with leads on 0.1 inch multiples.

Phenolic—MIL Spec PBE-P per MIL-P-3115 NEMA grade FR2. Copperclad phenolic meets NEMA FR2 and is one ounce.

Paper Epoxy—MIL Spec P-22324 type PEE NEMA grade FR3. Copperclad FL-PX per MIL-P-13949 NEMA grade FR3.

Epoxy Glass—For 'P' pattern boards with 'WE' in suffix-Unclad: MIL Spec MIL-P18177 type GEE NEMA FR4 and G-10. Copperclad: MIL Spec 13949 type FL-GF NEMA grade FR4 and G10. Color: Green. Best mechanical characteristics. **For all other glass epoxy boards** - FR-4 type, max. temp. 130°C (266°F); color, blue; best hole quality in epoxy glass; can plate through holes in clad material. Special sizes and hole layouts can be made to order, if one of the standard catalog items does not meet requirements. When ordering special size boards, the following MAXIMUM BOARD WIDTHS apply:

Pattern "A" in phenolic and epoxy paper or glass laminates; 20"
Pattern "B" all materials; 6"
Pattern "G" in phenolic and epoxy paper; 20". In epoxy glass; 16".
Pattern "H" in epoxy glass; 8.51". Pattern "P"; 10.00".

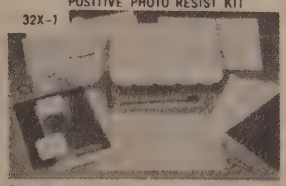
PHOTO SENSITIZED BOARD

+ POSITIVE ACTING PHOTO SENSITIZED COPPER CLAD BOARD FOR FASTER, EASIER ETCHED CIRCUITS



Vector positive acting coated photosensitized board speeds etched circuit manufacture because boards are coated with positive acting resist. Postive artwork is used for the circuit master pattern making use of readily available positive drafting aids. No reversing step required. A finished etched circuit can be made in less than an hour and boards etch in any common etchant. Vector positive acting developer must be used after exposure of the boards under U.V. light source such as a photo flood lamp or sunlight.

Kits 32X-1, 32XA-1 are recommended for trial evaluations of the system; later, purchase only boards and developer.

In the interest of improved design and performance, Vector reserves the right to make changes in its specifications without prior notice.

ORDERING INFORMATION

32X-1 Kit contains 1 bare and 1 sensitized 4½" x 6½" 1 ounce copperclad one side, 1/16 inch thick phenolic board, etching tray, ferric chloride etchant, developer, glass exposure plate, mask cutting film, tape, brush, razor knife, set of 4 sheets rub/transfer art work, layout paper, instruction sheets.

32XA-1 Kit has total of seven 1 ounce copperclad phenolic boards: 3 boards sensitized one side:1-4½" x 6½", 1-8.0" x 5.1", 1-4.5" x 2.73"; 2 boards sensitized 2 sides: 1-4½" x 6½", 1-4.5" x 2.73"; two bare boards: 1-4½" x 6½", 1-4.5" x 2.7" plus larger assortment of rub/transfer art work, etching chemical, developer, and other materials described in 32X-1 kit above.

1/16" THICK POSITIVE ACTING PHOTOSENSITIZED BOARDS

Vector WIRE WRAPPING TOOLS, TERMINALS, ACCESSORIES

WIRE WRAPPABLE TERMINALS & PINS — Vector "wrap-post" terminals are stamped from high grade copper alloy and have sharp corners (maximum radius .003") for gas-tight connections when properly wrapped with Vector or other wrapping equipment. Like many other Vector terminals, wrap-post terminals may be installed in Vectorbord® with inexpensive hand tools. New gang insertion tools permit installing some models at rates up to 1200 per hour — write factory. **As a result of their unique board holding design, when properly installed, terminals hold tightly to meet all production requirements.** Wrap-post terminals may be installed wherever required without high cost machines. They are ideal for building sub-assembly production boards for later incorporation in larger assemblies. Those with "stepped" shank designs may be used in plated-through holes.

T49 TRIFURCATED KLIP-WRAP Unique three-fingered clip on upper end makes this a time-saving terminal for production or experimental uses. The spring clip holds leads from 0.018" to 0.025", 0.032" or 0.040" until soldered. **Hand insertion tool P156** is adequate for installing a few at a time, but **spring impact tool P158 and D-8 die point** are recommended for larger quantity installation due to the speed and ease of use.

T49

T46 MINI-WRAP 0.028 inches square Sturdy double ended terminal fits .042" diameter holes. Has flanged mid-section.

T46

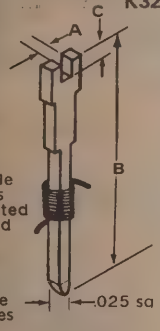
T44/T68 MINI-WRAP for 0.042" HOLES Low profile wire wrappable terminals have slotted upper end for soldered wires. Ideal for miniature assemblies



K32 "J" PIN for 0.042" HOLES Lowest cost wrappable terminal. May be used alone in circuit boards hole by inserting into two adjacent 0.028" to 0.042" diameter holes and bending shorter leg over for retention. Hooked end can also be embedded in encapsulated assemblies and wraps made on protruding tail. Illustration also shows terminal being used to provide wire wrappable extension tail to T42-1, a solderable Micro-Klip terminal.

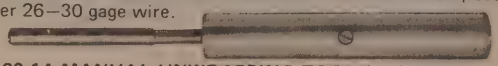
Hand insertion tool for above terminals is P133B or P205. P205 tool provides clearance (.020) between board and terminal cross bar. P133B tool inserts terminal cross bar flush with board.

ALIGNMENT BLOCKS — Drilled 0.62 inch thick blocks have holes on 0.1 inch centers to keep 0.025 inch square terminal tails straight during installation. **MB45-20** is two inches wide by four and one half inches long; **MB44-65** is four and one half inches wide by six and one half inches long.

VECTOR WIRE WRAPPING TOOLS produce high quality wrapped connections which meet or exceed the requirements of MIL Spec 1130. Designed for laboratory and light production requirements, the tools are low priced but give excellent results. Vector's exclusive design on the P160-2A series eliminates the need for separate bits and shells for different wire sizes.

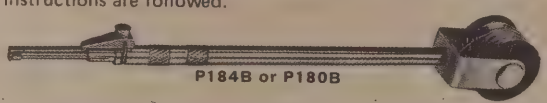
P160-2A MANUAL WRAPPING TOOL for 0.025 inch posts, number 26—30 gage wire.



P160-1A MANUAL UNWRAPPING TOOL for 0.025 inch square posts, number 26—30 gage wire.

P184B SERIES FOR 28 GAGE TEFZEL INSULATED WIRE

SLIT-N-WRAP™ WIRING TOOLS — Wire for 0.025" square posts. Revolutionary Slit-N-Wrap wiring is up to four times faster because wire-measuring, cutting and stripping are largely eliminated. The patented tool has a specially designed tip which slits the wire insulation just before it is wrapped on a post. Wire feeds from a spool on the tool making "daisy-chain" connections with single level wraps. Insulation is slit only during wrapping when instructions are followed.



P184B or P180B

P184B MANUAL SLIT-N-WRAP TOOL wraps heavy insulated (.005 inch thick) wire as tool is rotated by hand. Tool is shipped with two 50 foot spools of different colored Tefzel wire, instructions.

P160-4R3 driver unit for all Vector manual wire-wrapping tools. Portable field unit powered by self-contained rechargeable ni-cad batteries. High impact plastic housing, hand-fitting pistol grip design. Includes recharger.

P184-4T3B model is the same as P160-4R3 described above, but includes P184B tool installed, and accessories.

TEFZEL replacement wire for P184B tool. Available in 50 foot spools, two per package: red, W28-6B; green, W28-6A; white, W28-6E; yellow, W28-6F.

REPLACEMENT BIT for P184B series tools, or to convert P180 series tools to wrap Tefzel wire—P184-1B.

P180B SERIES TOOLS for 28 gage polyurethane nylon insulated wire — Smaller diameter polyurethane nylon insulated wire requires less room than other 28 gage insulated wire, resulting in more potential wraps per post and less crowded wire runs. If desired, polyurethane insulated wire may be soldered thru for making connections to round terminals, component leads, etc.

P180B MANUAL SLIT-N-WRAP TOOL wraps polyurethane nylon insulated wire as tool is rotated by hand. Tool is shipped with two 100 foot spools of different colored wire, instructions.

P160-4T2B DC model is same as P160-4R3 described above, but includes P180B tool installed and accessories.

P180-1B replacement bit for P180B series tools.

Polyurethane nylon coated replacement wire for P180 series tools. Available in 100 foot spools, three per package. Green; W28-2A; red, W28-2B; blue, W28-2D; clear, W28-2C.

In the interest of improved design and performance, Vector reserves the right to make changes in its specifications without prior notice.

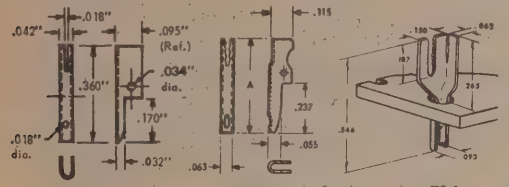
Vector SOLDERABLE & SOLDERLESS TERMINALS – PINS TOOLS FOR IDC CABLE

SOLDERABLE TERMINALS AND PINS

Suitable for PC board production, prototyping, experimenting.



Push-in terminals hold without staking, are inexpensive, faster to install, hold component leads until soldered. Popular hole sizes –0.042", 0.062", 0.093".

T42-1 MINIATURIZED COMPACT PUSH-IN – Fits 0.042" diameter holes such as in "P" pattern Micro-Vectorbord and can be mounted on 0.1 inch centers side-to-side. Tintillate plated. Ideal for IC work because leads can be laid in slots or pass through terminal vertically. By addition of soldered K32 "J" pin series terminal converts to wire wrappable type. Install with hand tool P149A.

T28 SERIES–Compact push-in fits 0.062" diameter holes in printed circuit boards and Vectorbord. Patterns B, F, G and H. Tintillate or silver plated, copper alloy material. Install with hand tool P91A.

T9.4 AND T9.6 SERIES – Push-in type fits 0.093 inch diameter holes in printed circuit boards or Vectorbord "A" and "AA" patterns. Serrated teeth (on all except T9.4A type) hold leads 0.032" to 0.040" in slots until soldered. Supplied with tintillate plating for easy soldering. T9.6 type has more "spring" action in slots and shank.

INBORD PINS –

Phosphor bronze, tin or gold plated pins push into .042" or .025" diameter holes and hold without staking. Ideal for test points, compact wiring terminals. Supplied in packages of 50 or 1000. Order foam backup part number MP100-50 for installing terminals. Hand tool P133A will push in .040 dia. pins; P134A is for .025" diameter pins. Spring loaded and gang insertion tools available – write factory.

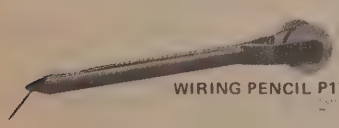
*Use in G-10 epoxy glass board only.



WIRING PENCIL P178-1

Pencil wiring tools & kit. Pencil wiring tool routes and guides spool fed 36 gage tinned, insulated wire around component or IC leads and terminals prior to soldering the joints with a 750°F (398°C) iron. Insulation "melts" when solder on iron is applied to joint. Fast and easy to use.

P178-1 wiring pencil is supplied with 400' spool 36 gage wire, complete instructions.

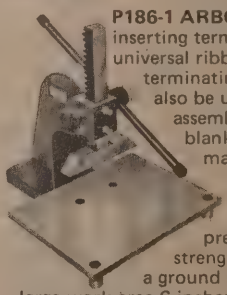
55X kit includes wiring pencil and wire plus 120' spool of bare tinned 30 gage wire, Vectorbord with tenth-inch spaced holes, wire spacers, 100 solder terminals and insertion tool, foam support block, chisel knife forming tool.

36 gage replacement wire is supplied in packages of two 400' spools: green, W36-4A; red, W36-4B; 32 gage wire in packages of two 200' spools: red, W32-4B.

P187 UNIVERSAL RIBBON CABLE IDC

(Insulation Displacement Connector terminating device)

This low-cost fixture terminates female IDC plugs made by Vector, Alpha, AMP, Ainsley, Berg, CW, JAE, 3M, SAE in seconds. (Excluding Alpha and CW strain relief cover type plugs); Berg "Female Quickie Connector" Type 65484 with strain relief requires P187-1 pressure bar which must be ordered separately. For best results, use in listed P186-1 press. Alternately, may be used with ordinary arbor press, vise, or "C" clamp.



P186-1 ARBOR PRESS for gang inserting terminals. Use with P187 universal ribbon cable plug terminating fixture. Can also be used generally for assembling, bending, blanking, forming, marking, piercing, punching, riveting and trimming. The press is die cast, high strength Zamak zinc with a ground steel mechanism. A large work area 6 inches by 8-3/8 inches (152.4 mm x 212.7 mm) and a 12 inch (304.8 mm) lever arm coupled with a 2.3 inch (58.4 mm) and 3.6 inch (91.4 mm) vertical capacity make this an ideal addition to any laboratory. Press includes removable pressure bar 4.4 inches by .75 inch (111.76 mm x 19.05 mm) installed on ram for use with terminal installation tools and ribbon cable terminating fixture.

In the interest of improved design and performance, Vector reserves the right to make changes in its specifications without prior notice.

VECTOR ELECTRONIC COMPANY, Inc., 12460 Gladstone Avenue, Sylmar, CA 91342; phone (213) 365-9661, twx (910) 496-1539

VECTOR DIP SOCKETS, SOCKET PINS & RECEPTACLES

SOCKETS FOR DUAL-IN-LINE DEVICES

DIP sockets available from Vector, accommodate most of the currently used DIP I.C. packages. Two key features are incorporated into these sockets:

- Tapered entry helps guide DIP leads into the socket receptacles.
- Gold inlay contact springs firmly hold the DIP leads and accommodate inconsistent DIP leads 0.010 inch (0.254 mm) x 0.020 inch (5.08 mm), and up to 0.024 inch (0.609 mm) diameter round pins.
- Individual contacts are accurately spaced 0.1 inch (2.54 mm) apart to ride for insertion into perforated circuit boards such as Vector "P" pattern.
- Polarizing notch or chamfer on body.

#157-1 DIP INSERTION TOOL

This is a "must" if one wishes to avoid lead loss in the insertion process, since it holds and aligns DIP leads for faster and more accurate assembly into sockets. #157-1 accommodates 14- and 16-pin DIPs.

P150 DIP EXTRACTION TOOL

Removal tool for DIPs assures easy removal of DIPs without damage. P150 extracts 8-, 14-, 16-, and 24-lead DIPs.

DUAL IN-LINE SOCKETS FOR ICS — ORDERING INFORMATION

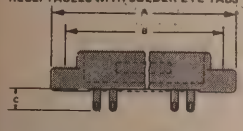
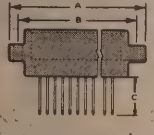
VECTOR RECEPTACLES FOR 0.062 THICK CIRCUIT CARDS

RECEPTACLES WITH SOLDER EYE TABS



RECEPTACLES WITH 0.025 SQ. WRAP POST TAILS



Vector receptacles are designed to accept printed circuit cards made by Vector or other manufacturers. Quality material and construction are used throughout to insure reliable performance. All wire wrappable contact tails (wrap post type) are 0.025 inch (0.64 mm) square.

PLUGBORDS FOR GENERAL USE WITH CONTACTS — But Without Matrix or Circuit Patterns

Use for building prototype, test and short run plug-in circuits because almost any component from DIPs to large resistors can be mounted anywhere on the boards. Boards have an overall grid of prepunched holes: 0.042 inch diameter on 0.1 inch centers (pattern "P"); 0.062 inch diameter on alternate 0.1 inch centers (pattern "G"). Boards are available with varied connector arrangements and mating connectors are listed. Back-to-back contacts on each etched side terminate in independent hole pads. Most boards have holes for attaching card ejectors.

ETCHED CONTACT SPECIFICATIONS — Epoxy glass Plugbords — 2 ounce copper .00005" nickel plate, gold flash. Quality flame-retardant 1/16" thick board materials are the same as those used for Vectorbord® and Micro-Vectorbord,® see preceding page. Terminals to fit.

RECOMMENDED CARD CAGES — For above Plugbords: 4.5" x 6.5" CCK-13 or CCK-13P; 4.5" x 4.5" CCK13A or CCK13AP: 7.98" x 9.6" CCK17 or CCK17P; 4.5" x 9.6" CCK4, CCK14 or CCK14P.

*Has 2 ounce tinned copper ground plane on back side with etched clearance holes. ElcoVar = Elco Varicon NPGF=nickel plated gold flashed
†Boards keyed with .1 offset on plug-in portion.

RECEPTACLE MOUNTED CARD GUIDES — The BR27 series card guides provide rugged support for 1/16 inch freestanding circuit boards and sure guidance while engaging board and receptacle. This arrangement is commonly found on motherboards and in units where space is at a premium. Package quantity all catalog numbers: 2 guides; 2 screws — 4/40 pan head, ¾ inch long; 2 flat washers; 2 lock washers; 2 hex nuts, 4/40. In bulk quantities (more than 50 prs.) fasteners packaged separately from guides. Material is aluminum alloy, clear anodized except BR27D is die cast zinc.

PLUGBORDS WITH ETCHED TINNED PADS AND BUSES

Use for prototype, test, and short run plug-in circuits. All boards ve an overall hole grid of 0.042 inch holes on 0.1 inch centers attern "P"). All etched circuitry above contact area is tinned for sy soldering. Boards are available with varied contact arrangements d mating connectors are listed. Back-to-back contacts on etched le terminate in independent hole pads. Terminals to fit.

3677 SERIES — These Plugbords have etched tinned buses, terleaved between pad areas. All models have tinned 3-hole pad oups for easy component mounting and interconnection. DIPs or mponents may be soldered directly to pads, or terminals installed pads. Socket tabs may also be attached to the pads to facilitate aking component changes. The heavy etched and tinned interleaved ound and voltage buses make complicated circuit construction lite easy, while providing great flexibility. The 3677 series has 96 dividual pads for mounting TO-5 and TO-18 transistors or round se integrated circuits.

4112 SERIES — These Plugbords have groups of 3-hole pads, terleaved "zig-zag" voltage bus, plus an overall etched ground ane on opposite side. The "zig-zag" design permits installed ns to connect or bypass the bus as desired. Reduced impedance d noise can be achieved with addition of Vector's double overhead trolley bus. DIPs or components may be soldered directly to pads, or terminals installed in pads. Socket tabs may also be attached to the pads.

8801 — Overall grid of 0.042 inch holes on 0.1 inch grid with single tinned pads on most holes, except top rows.

RECOMMENDED CARD CAGES for above Plugbords: 4.5" x 6.5" CCK-13 or CCK-13P 4.5" x 4.5" — CCK13A or CCK13AP 7.98" x 9.6" — CCK17 or CCK17P 4.5" x 9.6" — CCK4, CCK14 or CCK14P

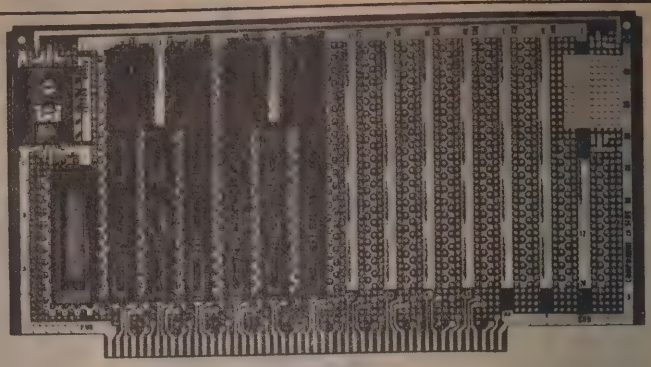
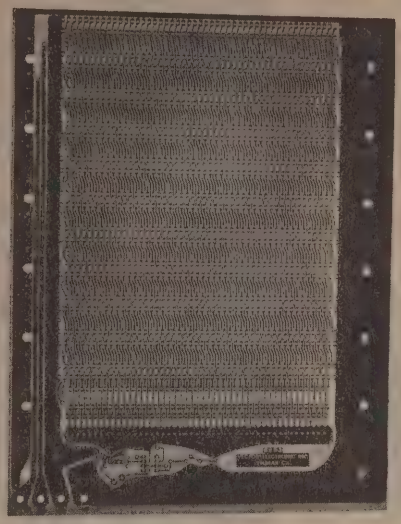
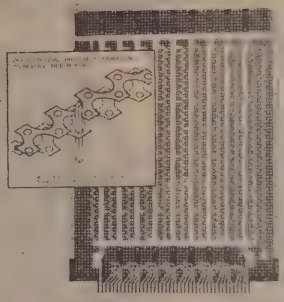
VECTOR MICROPROCESSOR PLUGBORDS



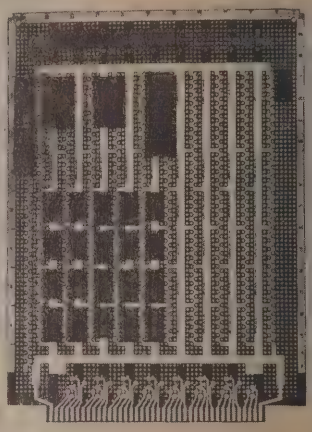
8800V
(Component side with added sockets. Available to order with sockets & terminals installed)



MODEL 8803
Motherboard for S-100 Bus Microcomputers



4350
(Wiring Side w/ Insert Showing Zig-Zag Bus)



4350
(Component Side w/ Added Sockets)

MICROPROCESSOR PLUGBORDS

With Vector Universal Microprocessor Plugbords, users can readily install any DIP device and quickly make the necessary interconnections to build peripheral interface equipment, expand memory capacity, or I.O. circuitry. Above FR-4 epoxy glass composite boards are furnished with an overall grid of 0.042 in. dia. holes on 0.1 in. grid, heavy tinned buses, plus nickel plated gold flashed contacts. Low in cost, the boards are planned for user installation and interconnection of wrap-post sockets wherever required. Copper-free areas are provided for installation of flat cable I.O. connectors or large bodied discrete devices.

8803 MOTHERBOARD FOR 8800V, 8801-1, 8804 AND OTHER S-100 BUS MICROCOMPUTER PLUGBORDS

This board has 11 connector mounting positions and etched tinned bus lines, solder mask, and etched circuitry for active or passive termination. Board measures 8½ in. x 11 in. and is FR-4 grade G-10 glass epoxy material. Twelve decoupling capacitors are furnished and user must supply own termination components and receptacles with tails spaced 0.125 in. by 0.250 in. such as Vector R681-2.

8800V - 10 in. wide by 5.313 in. high, has 100 (50 each side) contacts on 0.125 in. centers. Compatible with Altair 8800 and the IMSAI equivalent, the board can hold two 40-pin DIPs, eight 24-pin DIPs, and thirty-six 14- or 16-pin DIPs. Alternatively, it can hold fifty-two 14- or 16-pin DIPs, or ten 40-pin DIPs and eight 24-pin DIPs, or any combination in-between. Power is distributed to each DIP location by heavy copper tinned power and ground planes on opposite board sides for low impedance. Has two heat sink provisions, and one heat sink supplied with each board. For wiring ease, boards are identified by DIP zones as well as column and row hole designations.

Mating Connectors For 8800V

R681 — 50/100 contacts on 0.125 in. centers w/soldertails
R681-1 — Same as R681 except w/0.025 in. sq. wrap-post tails
R681-2 — 50/100 contacts on 0.125 in. centers w/0.25 in. long tails in two 0.250" spaced rows for mounting on Vector motherboard 8803

8800VA - 8800V with 98 wrap posts, T46-4-9, installed in contact pads, 3 in regulator pads, and 28 in power and ground planes for DIP wiring.

8800VB - Socketed model of 8800VA has the following complement of 3-level w.w. sockets installed and ready to wire: two 40-pin, eight 24-pin, thirty-six 16-pin.

4350 - 7 in. wide by 9.6 in. long, has 80 (40 each side) contacts on 0.125 in. centers. Compatible with TI 980 series computer, the board will hold sixty-three 14- or 16-pin DIPs over the power and ground buses, or six 24-pin DIPs plus forty-five 14- or 16-pin DIPs, or 40-pin microprocessor DIPs anywhere by cutting one etched jumper lead per location. Heavy, back-to-back tinned copper buses provide distributed decoupling capacitance. For user convenience, an extra plus or minus voltage zig-zag power bus is supplied on each side of the board.

Mating Connectors for 4350

R680-1 — 40/80 contacts on 0.125 in. centers; 0.025 in. sq. wrap post tails
R680 — Lower priced version of R680-1; numbering does not match 4350

Quality flame-retardant 1/16" thick board materials are the same as those used for Vectorbord® and Micro-Vectorbord.®

In the interest of improved design and performance, Vector reserves the right to make changes in its specifications without prior notice.

WIRE WRAPPABLE PLUGBORDS

Vector wire wrappable Plugbords are furnished with an overall grid of 0.042 in. holes on 0.1 in. centers, tinned interleaved buses, and ground planes on one side of some models. DIP sockets and wire wrappable terminals or socket pins may be installed wherever required and connected however required. "Free" board areas without buses are provided on all models for mounting discretes or other large components. All boards are flame-retardant epoxy glass and furnished with the most popular edge connectors, nickel plated and gold flashed. Ejector holes are provided on all models, and a full line of supporting compatible card and module cages is available from Vector. "Special" features on the 4066 series are:

GROUND PLANES -- A heavy overall 2 oz. tinned copper area on one board side can be used to reduce noise and transients, and to provide low impedance when used with buses on opposite side. A copper-free area surrounds each hole in the ground plane so installed terminals may be connected as required to one, or both, board side(s) as required.

ZIG-ZAG BUSES (on 4066 Series) -- Two uniquely configured independent bus paths accommodate terminal tails for connections as required. Use of high capacitance Vector double overhead trolley bus series with zig-zag bus lowers impedance for high frequency circuits, such as encountered in ECL 10,000 series logic.

CONTACT SPECIFICATIONS. Etched contacts:
-2 oz. copper .00005" nickel plate, gold flash.

Board Size	Part No.	No Cont.	Spacing	No. 14-pin DIPs Accom.	No. Independ. Buses		Mating Connectors

ANY-DIP T.M. PLUGBORDS

These plugbords have an overall pattern of .042 holes and accept all DIP sockets with lead spacings of 0.1 inch by 0.3, 0.4, 0.6 and 0.9, and with up to 64 pins. W.W. sockets and Vector's Slit-N-Wrap tool are ideal for fast hookup. A corner of the DIP area can be used for mounting a low profile heat sink (one heat sink and mounting hardware furnished), or two regulators in TO-220 packages. Leads on one regulator position are prewired to raw power input, ground input and plane, and regulated power plane. The other regulator position is uncommitted. Boards have a full ground plane network on the component side, and a similar but interdigitated power plane network is provided on the other side (for either raw or regulated power). These planes provide low impedance and high distributed capacity for power buses, versatility in DIP positioning, and place power supply sources less than one quarter inch away from any DIP lead. Board material is epoxy glass with 2 oz. tinned copper circuit patterns, and nickel plated gold flashed contacts.

DIP Mounting Capacity:
4½"x6½" models: forty-two 14- or 16-pin, or sixteen 22- or 24-pin, or eight 40-pin, or five 64-pin.
4½"x9.6" models: sixty-three 14- or 16-pin, twenty-four 22- or 24-pin, twelve 40-pin, six 64-pin.
10.0"x5.3" models: seventy 14- or 16-pin, or forty-nine 22-pin, or twenty-four 24-pin, or sixteen or twenty 40-pin, or six 64-pin.

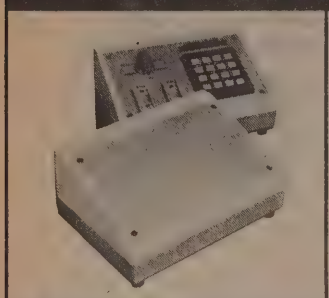
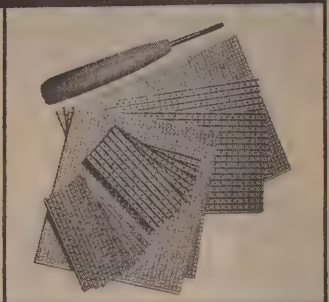
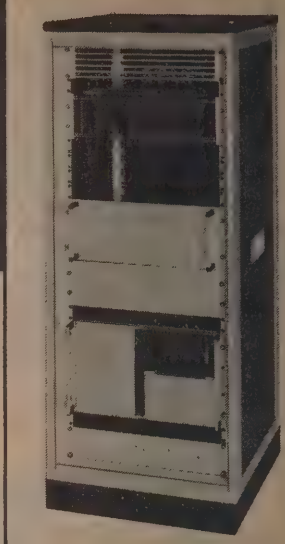
vero vero vero







Verobox®

High quality injection molded and vacuum formed plastic enclosures in a wide variety of sizes and styles. Over 40 variations are available to suit almost any packaging need. Features available on some styles include: integral hinged lids, externally accessible battery compartments, and aluminum panels. A wide variety of colors are available in production quantities.

Vero Card Racks

Five separate 19" racking systems result in over 2500 off-the-shelf combinations. All systems feature adjustable connector mounting and variable card spacing.

System 3A – An adjustable, economical kit for PCB's only. Card heights from 1" to 8" and of any depth up to 8" can be accepted in four standard E.I.A. heights up to 8.75". Optional accessories include hinged front panels.

System 3C – Designed to accept boards that are .75" less than frame height, this system is available in two depths (10" and 13"), and four E.I.A. heights up to 8.75". Optional accessories inlcude drop-in or hinged front panel.

System 3E – A rack system based on .5" spacing for PC boards and/or module units, all secured by a single action push-pull Verolock®. Modules are available in depths of 7.6" and 10.9", and widths of 1" to 8". 3E frames and modules are available in standard E.I.A. heights of 5.25", 7.0", and 8.75".

System KM4 – Designed as a EUROCARD housing to DIN41494, this system accepts both PC boards and modules. Among the board sizes this system will accept are 100 x 160 mm, 223.4 x 160 mm, and 4.5" x 6.5". Board spacing is variable from .4" minimum in increments of .2". Module widths of .6" to 16.8" are available in two depths. Rack heights of 5.25" and 10.5" are available.

System 1A – A heavy duty frame system for mounting a wide variety of modules in widths from 1" to 16". This versatile system offers over 200 off-the-shelf combinations plus thousands of non-standard combinations capable of satisfying most applications. Each module is retained by means of quick release quarter-turn fasteners. Frame heights up to 8.75" are available.

Send for Catalog showing the Complete Vero Line.

P.C. Boards

Several types of boards to suit most applications are available from stock including:

Veroboard® – Prototype PCB's incorporating a series of parallel copper tracks and pre-punched with a matrix of holes of various patterns (including 0.1" x 0.1" for IC's). Circuit assembly is accomplished by soldering components to boards and breaking copper tracks to shunt current as required.

D.I.P. Boards – Primarily designed to mount IC packages, the etched pattern on these boards provides convenient power and ground rails near all components. The universal pattern allows virtually any combination of IC packages to be mounted.

V.I.P.S. Boards – A variety of boards mounted with IC socket pins or IC sockets offering the user extremely high packaging densities.

Connectors

VERO offers a full line of edge connectors plus a wide range of high density, two piece PC board connectors. Contact spacings available include 0.1", 0.125", 0.156", and 0.200". DIP solder, solder eyelet, and solderless wrap terminations are also available. Send for our Connector Catalog.

Enclosures

A wide variety of metal enclosures are available including the following series':

Series 'D' Cases – Slim and attractively styled steel enclosures for mounting 19" equipment. Depths to 10.5".

Series 'A' Cases – Portable enclosures used to house 1A Series module units.

Verorack – Large enclosures for 19" equipment. Available in 47" and 68" heights initially. Features include lift-out side panels, left or right hinging doors, and lightweight aluminum extrusion construction.

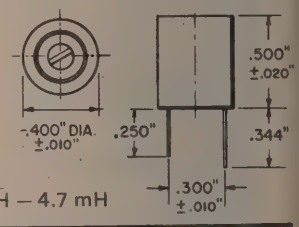
▪ **We will wind and assemble almost any type of R.F. inductor large or small. Just tell us what you need. Your request for quotation will receive prompt attention.**

KEY FOR SAMPLER PAGE

\# : Form with core only is available for this series
items : Number of different coils in the series
Range : Minumum inductance of the lowest value coil thru maximum inductance of the highest value coil
A : Diameter of form
B : Height above chassis when mounted
C : Diameter or spacing at mount

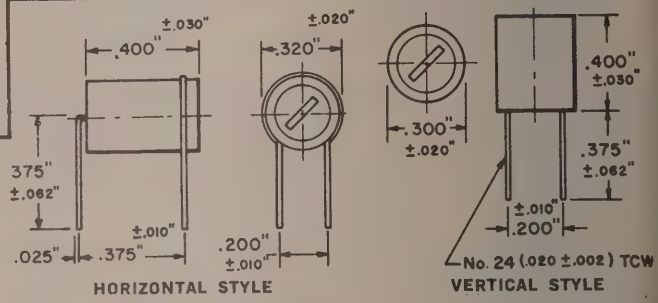
VL SERIES 29 items

Vertical Mount: Printed Circuit — Mil-C-15305
Tunable Range: .10 uH ±10%, .15-.22 uH ±15%, .33-4700 uH ±20%
Operating Temperature: −55°C to +125°C
Leads: No. 22 TCW
Nominal values: .10 uH — 4.7 mH



VLS SERIES (SHIELDED) 73 items

May be mounted either Vertically or Horizontally
Printed Circuit: Mil-C-15305
Tunable Range: .10 uH .12 uH ±5% — All others ±10%
Operating Temperature: −55°C to +125°C
Leads: No. 24 TCW
Nominal values: .10 uH — 100 mH



Nylon
4200 Series * 11 items
Range: .300 uH — 860 uH

Range: 40 uH — 750 mH
A .285 B 2.050 C .312

48A Series 9 items Range: .046 uH — .351 uH

The 48A Series of coils may easily be tapped at ⅛, ¼, ⅜, ⅝, ¾, ⅞ turn if desired.
Frequency Range: 30 MHz to 250 MHz
Wire Size: 20 AWG tinned copper
Form Length: .73 inches
Coil OD: .310 inches
Lead Spacing: .408 inches
Core: 10-32 x ⅜" Carbonyl J

Polypropylene

49A Series 10 items Range: .060 uH — 1.530 uH

Frequency Range: 10 MHz to 250 MHz
Wire Size: 22 AWG single polyurethane coated with tinned leads
Form Length: .87 inches except 49A146MPC
Coil OD: .285 inches
Lead Spacing: .324 inches
Core: 10-32 x ⅜" Carbonyl J

Polypropylene

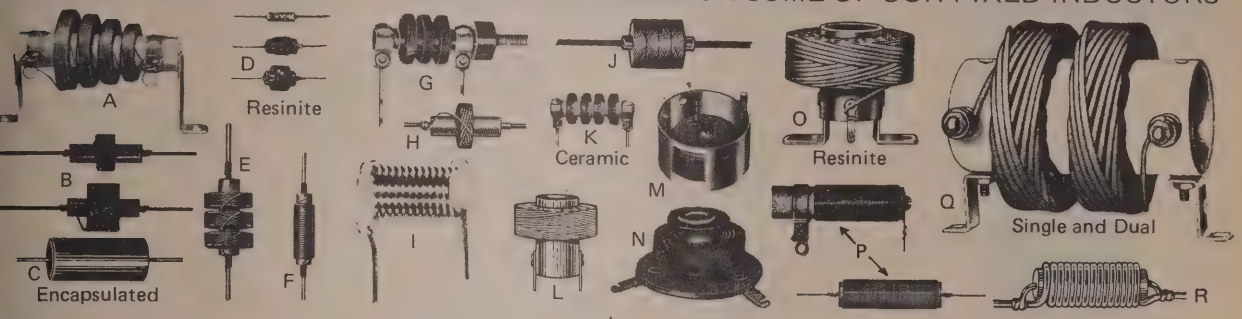
SAMPLER BELOW IS VERY ABBREVIATED SPECS ON SOME OF OUR FIXED INDUCTORS



A) Ceramic form .5x3.5 L= 1, 1.5, 2.5, 4 and 7 mH
A) Ceramic form .5x2.5 2 mH and 4 mH
B) Ferrite core .187x.625 25 items 100 uH — 10 mH
C) Resinite .312x1.000 16 items .10 uH — 10 uH
C) Iron .375x1.125 L= 10, 15, 24, 39, 55, 62, 82 & 100 uH
C) Resinite .500x1.000 L= .10, .15, .24 and .39 mH
C) Resinite .625x1.000 L= .55, .62, .75, and 1.0 mH
C) Iron .625x1.125 L= 1, 1.5, 2.4, 3.9, 5.5, 6.2, 8.2 & 10 mH
C) Ferrite .625x1.125 L= 2.5, 5, 10, and 50 mH
D) Core diameters .219 to .422 25 items 10 uH — 1,000 uH
E) Resi. core .187x.75 L=.10, .15, .24, .39, .55, .62, .75, 1 mH
E) Iron core .219x.875 L=1, 1.5, 2.4, 3.9, 5.5, 6.2, 8.2 & 10 mH
E) Ferrite core .250x.875 L= 2.5, 5, 10, 25 and 50 mH
F) Resinite core .187x.750 16 items .10 uH — 10 uH
F) Iron core .219x.875 L=10, 15, 24, 39, 55, 62, 82 & 100 uH
F) Resinite core .156x.500 16 items 1.0 uH — 18 uH
F) Iron core .156x.5 L=22,27,33,39,47,56,68,82 & 100 uH
G) Resinite form, Low capacity.625 o.d.x 1.25 1 mH & 2.5 mH
H) Resinite core .187x.375 23 items 20 uH — 950 uH
I) Polypropylene form .23x.38 9 items .023 uH — .590 uH

J) Phenolic core .107x.312 8 items .10 uH — .82 uH
J) Iron core .107x.250 53 items 1.0 uH — 2.2 mH
J) Iron core .107x3.75 11 items 2.5 mH — 10 mH
J) Iron core .125x.500 L= 12, 15, 18 and 22 mH
J) Ferrite core .187x.625 12 items 25 mH — 100 mH
K) Core .25x1.5 L= .25, .5, 1, 2.5, 5, 7.5, 10 and 25 mH
L) Resinite core .500x.875 25 items 1 mH — 100 mH
M) Ceramic dowel 1.25x1.125 L= .5, 1, 2.5, 5, 7.5, 10, 25mH
N) Ceramic dowel 1.125x.625 overall, 15 items .25 — 80 mH
N) Pwd. iron 1.125x.625 overall, 11 items .5 mH — 150 mH
O) 1.875x1.750 overall, light duty 50, 100, 250 and 600 uH
P) Frequency selective, for 1.8 MHz to 500 MHz 9 items
Q) Line Ch. 135uH 20A, 200uH 15A, 370uH 10A, 570 uH 5A
R) Powdered iron .531x1.312 3.35 uH 20 A
R) Pwd. iron .5x1.25 L=4.9, 8.8, 125,1000uH @15,10,3.5,1A
R) Powdered iron .312x.906 4 uH 8 A
R) Powdered iron .312x1.25 100 uH 2 A
R) Powdered iron .562x1.25 40 uH 3 A, 500 uH 2 A
R) Powdered iron .531x1.25 68 uH 5 A
R) Powdered iron .437x1.25 250 uH 2.5 A

Series M 37 items 1.00 uH — 1 mH 1/3 watt
Series L 37 items 10 uH — 10 mH 1/2 watt
Operating temp. —55°C to +125°C
Terminal strength meets five pound pull test per MIL-C-15305D.
All series meet requirments of MIL-C-15305D. Grade 1, Class B.

ıcapsulated Subminiature and Miniature Toroidal Inductors

T1, T2, T3, T4 Series

Applications: printed circuits and modules
Environmental: designed to meet MIL-C-15305, Grade 1, Class B (−55°C to +125°C)
Moisture and shock resistant, immersion proof
Powdered iron toroidal core, low external magnetic field
Identification: part number and inductance value printed in contrasting color

Maximum operating temperature: 125°C
Rated temperature rise (at 90°C): 35°C
Dielectric withstanding voltage: 700 v rms
Terminal pull: 5 pounds
Altitude rating: 70,000 feet
Overload current: 1.4 times the rated current

FEATURES

- International standard sizes
- Accurately adjustable inductance
- Printed circuit board mounting
- Predictable temperature coefficient
- High Q

SERIES 3000 FERRITE CORE INDUCTORS/14mm

BMP Part Number		L mH ±6%	Nom. DCR
4292	3103	1.00	0.70
	3203	2.00	1.40
	3503	5.00	3.50
	3104	10.00	7.90
	3204	20.00	14.00
	3504	50.00	35.50
	3105	100.00	81.20
	3205	200.00	140.00
	3305	300.00	216.00

Inductance measured @ 1000Hz NOM.
Units may be terminated on any combination of pins
Frequency Range 1.0-200 KHz
Inductance Range .5 mH to 1000 mH
Litz wire available on special order
$\triangle L = \pm 3\%$ STD Adjustment
$\triangle L = \pm 6\%$ Special

QUALITY COILS SINCE 1946

CADDELL-BURNS

40 East Second Street
Mineola, New York 11501

Area Code 516 746-2310

OVER 32 YEARS OF DEPENDABILITY

In the design and manufacture of coils and transformers for industry and defense. We specialize in the manufacture of coils and assemblies to the most rigid military specifications.

- FERRITE POT-CORE ASSEMBLIES
- I.F. TRANSFORMERS • SATURABLE REACTORS
- EPOXY ENCAPSULATED COIL ASSEMBLIES
- BROADBAND MATCHING TRANSFORMERS
- ANTENNA COILS AND TRANSFORMERS
- OSCILLATOR COILS • BFO TRANSFORMERS
- INVERTER-CONVERTER TRANSFORMERS
- DELAY LINES • PULSE TRANSFORMERS
- DIFFERENTIAL TRANSFORMERS
- FILTERS (HIGH, LOW, BAND-PASS; TRAPS)
- PHOTO-FLASH TRIGGER TRANSFORMERS
- TOROIDAL POWER INDUCTORS
- DC TO DC CONVERTER TRANSFORMERS

PARTS:

COIL FORMS AND BUSHINGS

SHIELD CANS

SPADE BOLTS AND MOUNTING HARDWARE

TUNING CORES

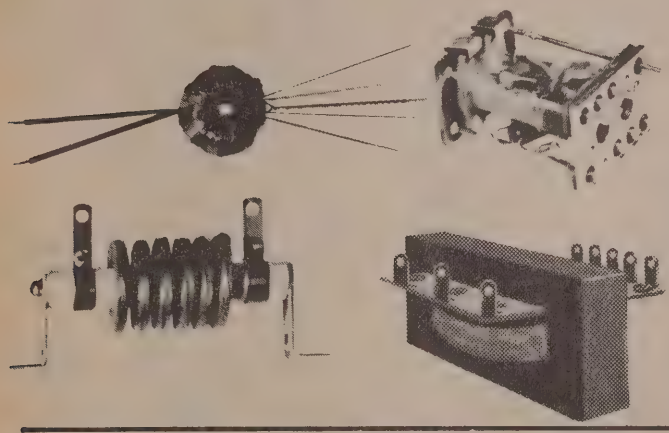
CUP CORES, POT CORES, TOROIDS

TERMINALS AND TERMINAL BOARDS

R.F. VARNISH, AND OTHER PARTS

CUSTOM WINDINGS COMPLETE FACILITIES

for custom winding to your specifications.



FERRITE POT CORE INDUCTORS & TRANSFORMERS

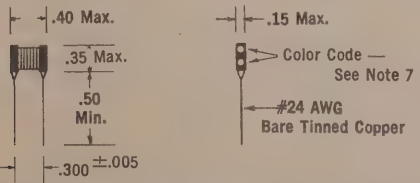
Caddell-Burns has complete facilities for windin and assembling all types of pot core assemblies, bot fixed and variable. Write or phone in your specifica tions.

MODIFIED STOCK COILS

Any of the coils shown on these pages can be woun to intermediate inductance values or modified t meet customer requirements, often at no additiona cost!

PRINTED CIRCUIT CHOKES

TYPE 6550 1.0μH-10mH 10% Tolerance



NOTES:
1. Effective inductance and Q measured on Boonton 260A Q-meter at frequencies specified, in accordance with MIL-C-15305.
2. Current rating (Rated IDC) is based on 0.2 watt power dissipation for approx. 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current.
3. Incremental current (INCR I) is the minimum current at which the inductance will be decreased by 5% from its initial (zero — DC) value.
4. Dielectric Withstanding Voltage — 100 VRMS.
5. Operating Temperature Range — −55°C to +105°C.
6. Materials:
   Coil Form — Ferrite.
   Magnet Wire — Type B per MIL-W-583.
   Coating — Polyurethane per MIL-I-46058.
7. Marking — Color coded per dash number using standard EIA color code.

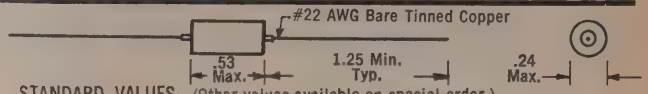
MINIATURE HIGH CURRENT CHOKES

TYPE 6470 4μH-10mH 10% Tolerance
Recommended mounting pitch — 1.00″



NOTES:

1. Effective inductance and Q measured on Boonton 260A Q-meter at frequencies specified in accordance with MIL-C-15305.
2. Current rating (Rated IDC) is based on .25 watt power dissipation for approx. 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current.
3. Incremental current (INCRI I) is the minimum current at which the inductance will be decreased by 5% from its initial (zero — DC) value.
4. Dielectric Withstanding Voltage — 1000 VRMS.
5. Operating Temperature Range — −55°C to +105°C.
6. Materials:
   Coil Form — Ferrite.
   Magnet Wire — Type B per MIL-W-583.
   Cover — Polyester-alpha cellulose.
   Coating — Polyurethane per MIL-I-46058.

HIGH CURRENT CHOKES

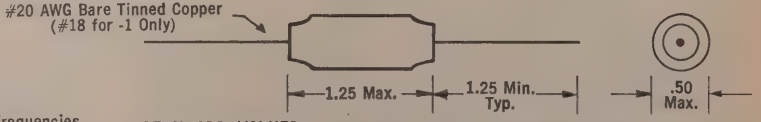
TYPE 6150 10-100μH
Recommended mounting pitch — 1.50″



NOTES:

1. Effective inductance and Q measured on Boonton 260A Q-meter at frequencies specified, in accordance with MIL-C-15305.
2. Current rating (Rated IDC) is based on .75 watt power dissipation for approx. 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current.
3. Incremental current (INCR I) is the minimum current at which the inductance will be decreased by 5% from its initial (zero — DC) value.
4. Dielectric Withstanding Voltage — 1000 VRMS.
5. Operating Temperature Range — −55°C to +85°C.
6. Materials:
   Coil Form — Ferrite.
   Magnet Wire — Type B per MIL-W-583.
   Jacket — PVC shrink tube.

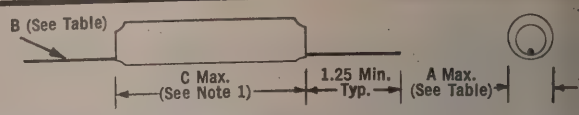
HIGH CURRENT/HIGH VOLTAGE CHOKES

suitable for any high-current application — especially those requiring high-voltage transient suppression.

TYPE 6309 13-410μH 10% Tolerance
20-50KV minimum breakdown voltage



NOTES:
1. Minimum Breakdown Voltage ratings and dimensions are as follows:

	Min. Breakdown	C Max. Length In.	Rec. Mtg. Pitch In.
-1 thru -5	20KV	2.8	3.0
-6 thru -10	35KV	4.2	4.4
-11 thru -15	50KV	5.8	6.0

2. Inductance measured on General Radio 1650 Impedance Bridge at 1 KHz.
3. Current rating (Rated IDC) is based on power dissipation of 1.5 watt for -1 thru -5, 2.5 watt for -6 thru -10, and 3.5 watt for -11 thru -15; for approx. 20°C temperature rise. Depending on application, these units may be operated at up to twice the rated current.
4. Incremental current (INCR I) is the minimum current at which the inductance will be decreased by 5% from its initial (zero — DC) value.
5. Dielectric Withstanding Voltage — 1000 VRMS.
6. Materials:
   Coil Form — Ferrite. Jacket — PVC shrink tube.
   Magnet Wire — Type B per MIL-W-583.
   Lead Wires — Bare tinned copper.

STANDARD VALUES: (Other values available on special order.)

Part No.	Nominal Inductance	Max. DCR Ohms	Min. SRF MHz	Rated I_{DC} Amps	INCR I Amps	A Dia. In.	B Lead Size AWG

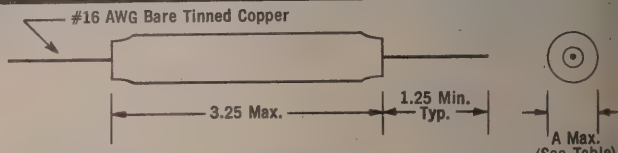
HIGH CURRENT/HIGH VOLTAGE CHOKES

suitable for any high-current application — especially those requiring high-voltage transient suppression.

TYPE 6400 80μH-2.0mH 10% Tolerance
Recommended mounting pitch — 3.50″
25kV minimum breakdown voltage



NOTES:
1. Inductance measured on General Radio 1650B Impedance Bridge at 1 KHz.
2. Current rating (Rated IDC) is based on 2.0 watt power dissipation for approx. 20°C temperature rise. Depending on application, these units may be operated at up to twice the rated current.
3. Incremental current (INCR I) is the minimum current at which the inductance will be decreased by 5% from its initial (zero — DC) value.
4. Dielectric Withstanding Voltage — 1000 VRMS.
5. Operating Temperature Range — −55°C to +85°C.
6. Materials:
   Coil Form — Ferrite.
   Magnet Wire — Type B per MIL-W-583.
   Jacket — PVC shrink tube.

STANDARD VALUES: (Other values available on special order.)

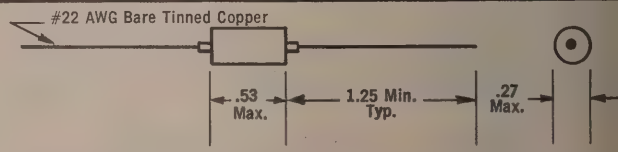
SHIELDED CHOKES

TYPE 1670 250μH-100mH 10% or 25% Tolerance
Recommended mounting pitch — .80″



NOTES:
1. These units are especially suited for filtering applications where small size, low DC resistance and magnetic shielding are required. They are not recommended for applications requiring extremely high stability.
2. Inductance (LP) is measured at 1.0 KHz on a General Radio 1650-B impedance bridge. These units are available in either 10% or 25% inductance tolerance.
3. The test voltage specified in column 3 is the RMS voltage across the test unit during inductance measurement.
4. Current rating (Rated IDC) is based on 0.3 watt power dissipation for approx. 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current.
5. Incremental current (INCR I) is the minimum current at which the inductance will be decreased by 5% from its initial (zero — DC) value.
6. Dielectric Withstanding Voltage — 100 VRMS.
7. Materials:
   Coil Form and Shield — Ferrite.
   Magnet Wire — Type B per MIL-W-583.
   Coating — Polyurethane per MIL-I-46058.

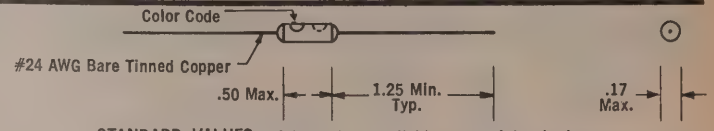
Area Code 516 746-2310

MINIATURE SHIELDED CHOKES

TYPES 6375/6376 1.0μH-5.0mH 10% Tolerance
Recommended mounting pitch — .70″



NOTES:
1. Effective inductance and Q measured on Boonton 260A Q-meter at frequencies specified, in accordance with MIL-C-15305.
2. Current rating (Rated IDC) is based on 0.25 watt power dissipation for approx. 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current.
3. Incremental current (INCR I) is the minimum current at which the inductance will be decreased by 5% from its initial (zero — DC) value.
4. Dielectric Withstanding Voltage — 1000 VRMS.
5. Operating Temperature Range — −55°C to +105°C.
6. Materials:
   Coil Form and Shield — Ferrite.
   Magnet Wire — Type B per MIL-W-583.
   Construction — Epoxy encapsulated.
   Coating — Polyurethane per MIL-I-46058.

Marking — Color coded per dash number using standard EIA color as follows: 6375 — one color dot; 6376 — two color dots. e.g.: 6375-1 — one brown dot; 6376-1 — two brown dots, etc.

STANDARD VALUES: (Other values available on special order.)

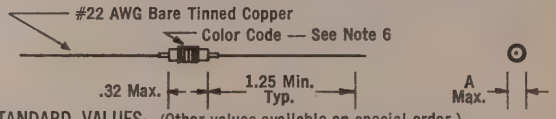
MINIATURE CHOKES

TYPE 660 0.1-2.0μH 10% Tolerance
Recommended mounting pitch — .70″



NOTES:
1. Effective inductance and Q measured on Boonton 260A Q-meter at frequencies specified, in accordance with MIL-C-15305.
2. Current rating (Rated IDC) is based on 0.2 watt power dissipation for approx. 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current.
3. Dielectric Withstanding Voltage — 100 VRMS.
4. Operating Temperature Range — −55°C to +105°C.
5. Materials:
   Coil Form — Mineral filled phenolic.
   Magnet Wire — Type B per MIL-W-583.
   Coating — Polyurethane per MIL-I-46058.
6. Marking — Color coded per dash number using standard EIA color code.

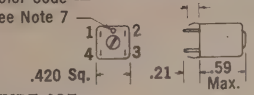
MINIATURE SHIELDED VARIABLE INDUCTORS

TYPES 435/6344 .25-70μH

SCHEMATIC

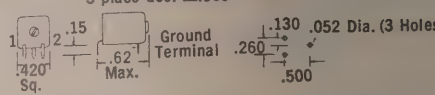
Color Code — See Note 7



TYPE 435
vertical mount

Recommended Mounting Layout

Tolerance 2 place dec. ±.020
3 place dec. ±.005



TYPE 6344
horizontal mount

Recommended Mounting Layo

NOTES:

1. For vertical mount, order as 435-1 . . . etc. For horizontal mount, order as 6344-1 . . . etc.
2. Effective inductance and Q measured on Boonton 260A Q-meter at frequencies specified, in accordance with MIL-C-15305.
3. Self-resonant frequencies are measured at maximum inductance.
4. Unit can be tuned from top or bottom with ⅛" insulated screwdriver (part no. C-B 2102). For type 435 only, provide .156 dia. hole if bottom access to tuning core is desired.
5. Current rating is based on .15 watt power dissipation for approx. 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current.
6. Materials:
   Terminals — Tin-plated brass. Core — Ferrite.
   Coil Form and Base — Molded nylon. Shield Can — Cadmium-plated brass.
7. Marking — Marked with Caddell-Burns Part No. on side of can, and color-coded per dash number on bottom between two active terminals.

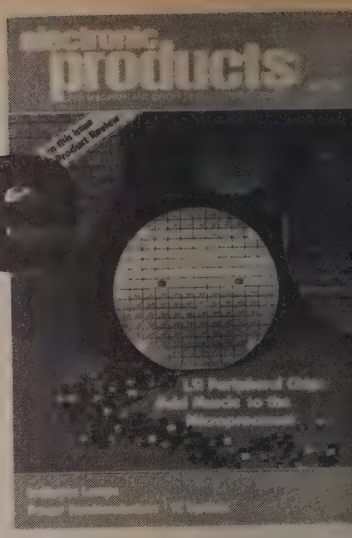
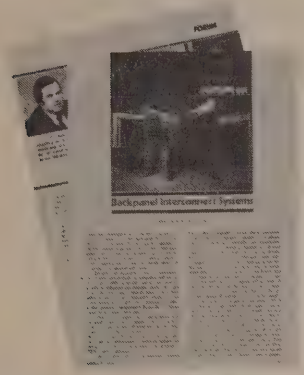
stay up to date



SUBSCRIBE TO ELECTRONIC PRODUCTS MAGAZINE. IT'S YOUR *COMPLETE* GUIDE TO EVERYTHING THAT'S NEW IN THE FAST-CHANGING WORLD OF ELECTRONIC PRODUCTS AND SYSTEMS.

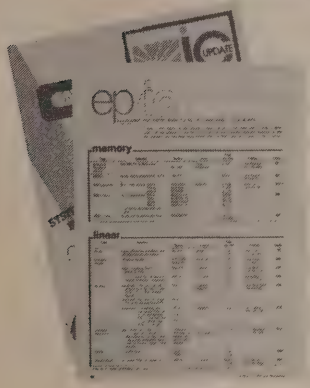
FEATURE STORIES every month on electronic products, applications and availability.



FORUMS—Reports on meetings of manufacturers, users and distributors. Get the very latest news on a wide variety of products.

NEW PRODUCT NEWS—Hundreds of new products are introduced each month. You'll get the facts on not only what the new product is, but also where to get it, basic prices and current delivery.

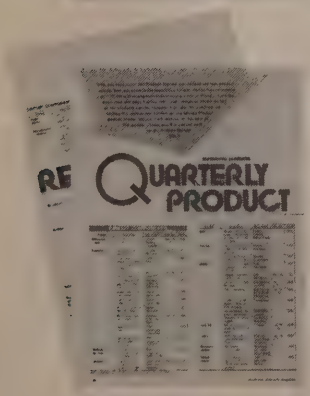
EP/IC UPDATE—Exclusive in ELECTRONIC PRODUCTS. A monthly report on *everything* that's new in the fast-moving world of integrated circuits.



QUARTERLY PRODUCT REVIEW—Another exclusive in ELECTRONIC PRODUCTS. A complete report of *every* new electronic product introduced in the previous quarter. This feature is in the January, April, July and October issues.

QUARTERLY PRODUCT PLANNING DIRECTORY—A compilation of the latest catalogs of a wide variety of electronic products and systems.

OUTLOOK—Important industry news affecting electronic products and systems.



COMPONENT CAPERS—A humorous look at the strange and wonderful world of electronics.

MINI-GLOSSARIES, Quizzes and more—Each and every month for over twenty years the readers of ELECTRONIC PRODUCTS learn something new about the products they work with and specify.

DALE®

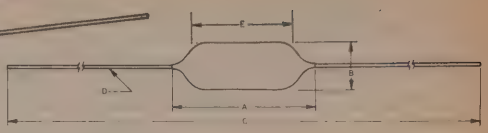
RF CHOKES

Epoxy—Uniform Coated



FEATURES

- Equivalent in quality to molded chokes—at a lower price.
- Excellent for automatic insertion.

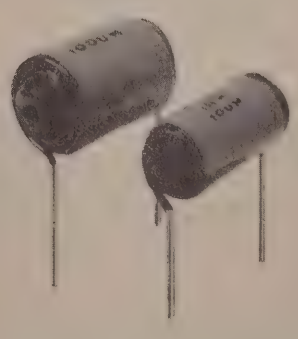
DALE®

TYPE IH SERIES

High Current Filter Chokes

FEATURES

- Flame retardant coating
- Printed circuit mounting
- Pre-tinned leads



Typical Applications
Noise filtering for switching regulators, power amplifiers, power supplies and SCR or Triac control circuits.

ELECTRICAL SPECIFICATIONS

Model	Ind. @ 1 KHz *±10%	Current (Max.)	DC Resistance (Max.)	Self-Resonant Frequency (Min.)

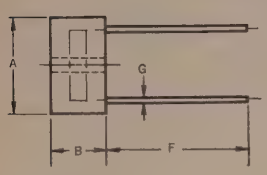
DALE®

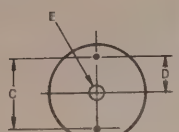
FILTER INDUCTORS, MIL-T-27

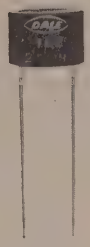
Toroidal, Encapsulated or Dipped

FEATURES

- Choice of encapsulated (TE) or dipped (TD) styles
- TE style designed to meet the requirements of MIL-T-27, Type TF5SX20ZZ. TD style combines low cost with excellent performance in commercial applications.







TE SERIES

Model No.	A Max.	B Max.	C	D	E	F Min.	G	Ind. Range

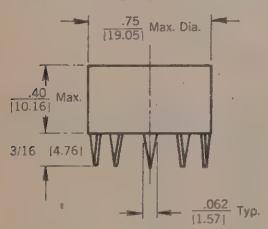
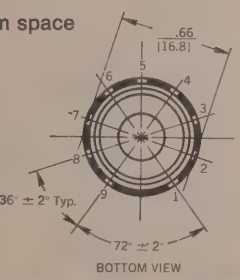
ITC-1052

Converter Transformers

FEATURES

- High conversion efficiency from DC input to filtered DC output
- Designed especially for low-power solid state circuits
- Designed for mounting on printed circuit boards
- Miniature size for minimum space





BOTTOM VIEW

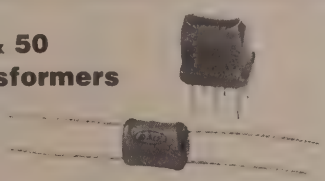
OPERATING CHARACTERISTICS*

Model No.	Input	Output	Frequency ± 20%	Efficiency Min.
1052-0	3.6 VDC	+7.2 ± .2 VDC at 150 mw −7.2 ± .2 VDC at 150 mw	7.5 KHz	50%
1052-6	5 VDC	200 ± 10 VDC at 500 mw	11 KHz	64%
1052-7	5 VDC	200 ± 10 VDC at 250 mw +15 ± .4 VDC at 125 mw −15 ± .4 VDC at 125 mw	11 KHz	60%
1052-9	5 VDC	+15 ± .4 VDC at 500 mw −15 ± .4 VDC at 500 mw	8 KHz	75%
1052-30	12 VDC	15 ± .4 VDC at 1 watt	7.5 KHz	72%

*Characteristics relate to transformer when operated in applicable test circuit and at specified load power.

PT-10, 20 & 50

Pulse Transformers



- TRIGGER TYPE PULSE TRANSFORMERS designed for low-cost trigger source isolation in half and full wave SCR power control circuits. P.C. and bobbin styles.
- PRIMARY INDUCTANCE RANGE: 200 μh to 5,000 μh.

CUSTOM COILS

- Dale offers wide custom capability in toroids, bobbins, RF transformers and inductors, power transformers, and audio transformers.

CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKATALOG FÜR ELEKTRONIKER
ELECTRONIC ENGINEERS CATALOGUE

he 1978 edition is out...and the response is in...
IMMEDIATE AND OVERWHELMING

ACCEPTANCE

The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to—and from—Western Europe.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 product headings & cross-references alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

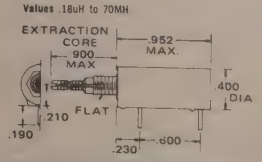
Delevan Products are manufactured and tested in accordance with MIL-C-15305 to meet the high levels of performance demanded by today's quality-minded manufacturers. A comprehensive program of Quality Assurance and Environmental Testing insure the reliability of **Delevan** components.

MOLDED VARIABLE RF

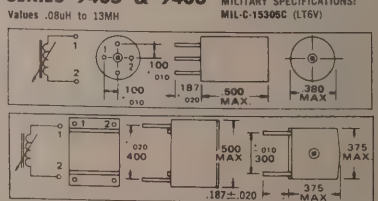
SERIES 4000 & 4100

MILITARY SPECIFICATIONS:
MS-90543 (LT12V)
MS-90546 (LT12V)
Values .18uH to 70MH



SERIES 9405 & 9406

MILITARY SPECIFICATIONS:
MIL-C-15305C (LT6V)
Values .08uH to 13MH



coils and inductive components

- Molded RF
- Shielded RF
- Micro-i coils & chip inductors
- Transformers
- Molded variable RF
- Potted coils
- Custom inductors

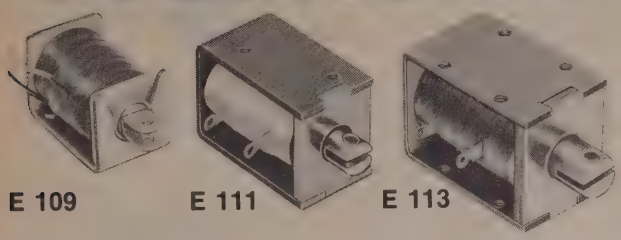
This partial listing of Delevan Inductors is designed to give the Design Engineer a condensed overview of our product line. Our local representatives, distributors and factory sales engineers are available to serve your needs in the application of Delevan Products.

They will be happy to provide a complete catalog of all our coils and other inductive components. See the index for the complete listing of the Delevan sales organization.

SOLENOIDS



E 109 E 111 E 113

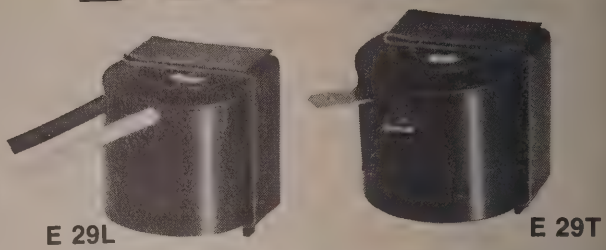
■ Voltages from 6 V to 230 V AC or DC ■ Custom lead lengths and terminal variations ■ Special plunger lengths and styles ■ Impregnated or encapsulated models

Specifications

	Power Requirement Intermittent/Continuous (25%)	Pull (Continuous Only)
E 109	18 W/4.5 W	8 oz. @ .05" gap
E 111	20 W/5.2 W	20 oz. @ .05" gap
E 113	30 W/8 W	35 oz. @ .05" gap

■ All metal parts are zinc plated. ■ Staked yoke standard. You may specify conical or flat plungers on production orders. ■ Life expectancy at rated load: 5×10^6.

BUZZERS



E 29L E 29T

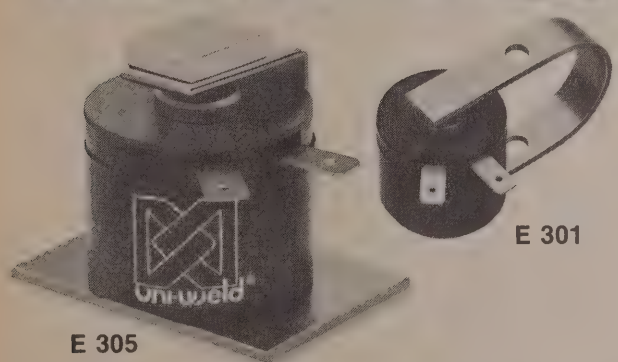
■ Produce loud, distinctive sound ■ Mount quickly easily with single screw ■ Manufactured with exclusive Uni-Weld® process

Specifications

Order by number code: E 29 or E 30	Terminals		Leads (5" Length Standard)	
	E 29	E 30	E 29	E 30
6 Volt, 60 Hz.	6E29T	6E30T	6E29L	6E30L
12 Volt, 60 Hz.	12E29T	12E30T	12E29L	12E30L
24 Volt, 60 Hz.	24E29T	24E30T	24E29L	24E30L
120 Volt, 60 Hz.	120E29T	120E30T	120E29L	120E30L

Ask about quantity prices.
Special voltages and terminals available.

VIBRATORS



E 301

E 305

■ Improve distribution and flow of solid or liquid materials ■ Long life ■ Noiseless ■ Adhesive mounting pad ■ Easy to install

Specifications
Model: Miniature Vibrator, E 305
Voltage: 115 V AC, continuous duty (other voltages to specification)
Input: 5 watts
Vibrating Frequency: 120 cps.
Force: 2.5 g's
Size: 1.50" (3.81 cm) x 1.00" (2.54 cm) x 1.25" (3.18 cm)
Weight: 1.8 oz. (50 gms.)

CLICKERS

E 8600

■ Creates distinctive signal in electronic keyboards ■ Reduces chance of error on "silent", "soft-touch" keyboards

Specifications
Duty Cycle: Approx. 15% max.
Coil: 20 ohm
Coil Insulation: 1500 V AC, 60 Hz. to frame. Other voltages to specification. Special windings available to suit other operating conditions.
Recommended Conditions: 20 volt pulse for 5 millisecond duration. (Signal may be varied by changing the duration of applied pulse.)
Termination: 8" leads standard. Terminals available.

Coil products to your specifications

Coils for any application: solenoids, power converters, relays, printers, reed switches, clocks, motors, clutches, tachometers, controls, transformers, vibrators, buzzers.

Check our capabilities: random wound bobbin coils, thread interweave coils, coil assemblies, transfer molding, encapsulation, impregnation, fluidized bedcoating, ultrasonic welding.

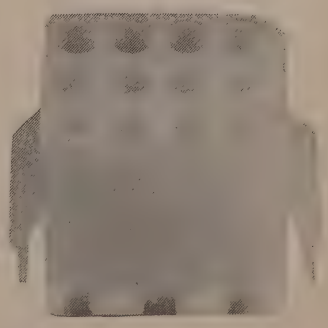
FROM DESIGN TO DELIVERY...

PRECISION INJECTION MOLDED COIL FORMS, BOBBINS, CONNECTOR HOUSINGS, AND COMMUNICATION PRODUCTS.

Harbison Industrial Products has complete in-plant facilities and services for injection molded products. Our in-house capability, in tool design, manufacture, part production and terminal insertion, assures the strictest quality for the components we provide. And our unique capability in either insert molding or post molding insertion can provide you with complete coil forms ready for winding.

The newest custom designed equipment and the ability to injection mold with modular family molding techniques — whereby a variety of different parts made from the same material can be produced in a single mold — affords attractive economies in tooling costs, without sacrificing the precision and quality of Harbison components.

We can meet or exceed the customary tolerances for injection molding your electrical and electronic components, and we mold in virtually any granular thermosetting plastic and most of the engineering thermoplastics, including nylon, Zytel 101*, Valox+, Delrin*, Noryl+, phenolics, and probably the material you're using now.



Write for the BR 16-2. It will give you an idea of how we may be able to help you.

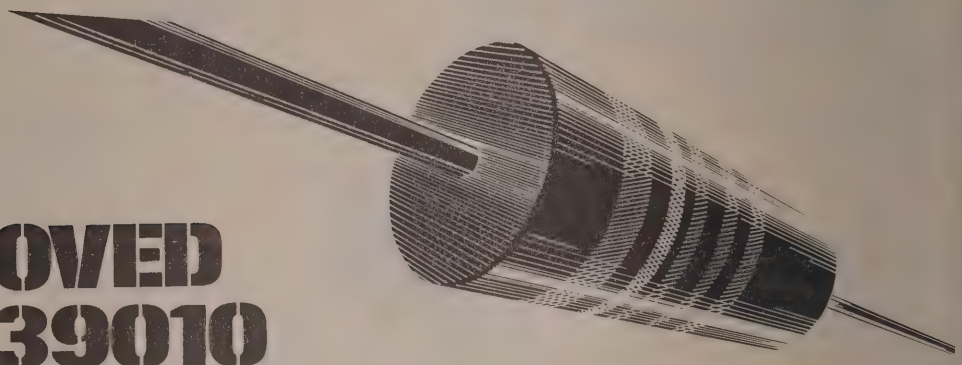
Inductors



APPROVED MIL-C-39010

LATEST REVISION

MIL-C-39010/1A - /2A - /3A FAILURE RATE "R" .01%/1000 HRS.
MIL-C-39010/4A - /5A - /6A - /7A FAILURE "R" .01%/1000 HRS.
MIL-C-39010/8A - /9A - /10A FAILURE RATE "R" .01%/1000 HRS.

Nytronics' history of technical leadership in inductors has a new chapter. The first company to extend the standard line concept to variable inductors has remained ahead in every subsequent step of refinement and miniaturization.

Today, there's a new place for a familiar group of inductors under highest reliability military specifications—MIL-C-39010 (latest revision). The unique "T" lead construction eliminates fine wire consideration that has previously concerned design engineers on critical circuitry.

With sizes ranging from the world's smallest shielded inductor to the most complex variable inductor . . . shielded, unshielded and variable, in hundreds of off-the-shelf values . . . it makes good sense to check first with Nytronics or your local distributor.

Now tested and approved to highest reliability military specifications.

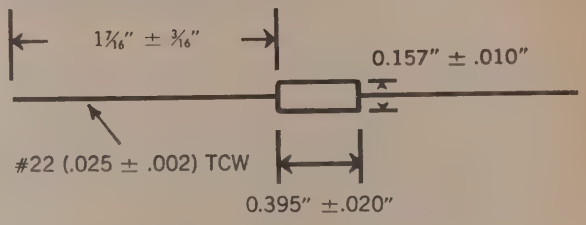
Inductors

MS-INDUCTOR SERIES 75087, 75088, 75089 MOLDED SHIELDED INDUCTOR

GRADE 1 CLASS A

Ultra-Reliable Molded Shielded Miniature Inductor. Inductance Range: 0.1uH to 100,000uH.

The **MS-INDUCTOR SERIES** are R.F. Inductors specifically designed to meet the demanding requirements of MIL-C-15305 (latest revision). The MS-INDUCTOR Series epoxy molded envelope and shielding offers the design engineer reliability, electrical performance, and minimum coupling in high density packaging.



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% over the entire inductance range.
Dielectric Strength: 1000 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Q: Measured on a Q-Meter.
Maximum Current: Based on temperature rise not to exceed 15°C at 90°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0076 cubic inches **Weight:** 0.75 grams maximum
Shielding: At 1000 cycles two units assembled side by side exhibit less than 3% coupling.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +105°C.

Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), Grade 1, Class B. High frequency 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 100G, 6 MS.

Marking: Color coded per MIL-C-15305 (latest revision).

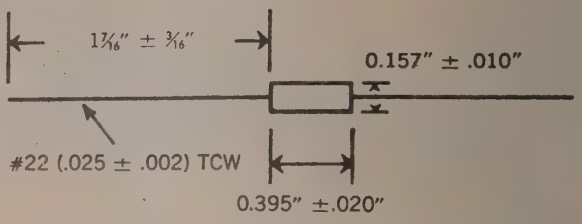
Inductors

MS-INDUCTOR SERIES
90537
MOLDED SHIELDED INDUCTOR
(Manufactured per MS-90537)

Ultra-Reliable Molded Shielded Miniature Inductor.
Inductance Range: 0.1uH to 100,000uH.
Unique "T" design eliminates Fine Wire considerations.

The **MS-INDUCTOR SERIES** are R.F. Inductors specifically designed to meet the demanding requirements of MIL-C-15305 (latest revision). The MS-INDUCTOR Series epoxy molded envelope and shielding offers the design engineer reliability, electrical performance, and minimum coupling in high density packaging.



GRADE 1 CLASS B

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% over the entire inductance range.
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Q: Measured on Q-Meter.
Maximum Current: Based on temperature rise not to exceed 35°C at 90°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0076 cubic inches **Weight:** 0.75 grams maximum
Shielding: At 1000 cycles two units assembled side by side exhibit less than 3% coupling.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.

Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305D, Grade 1, Class B. High frequency 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 100G, 6 MS.

Marking: Color coded per MIL-C-15305 (latest revision).

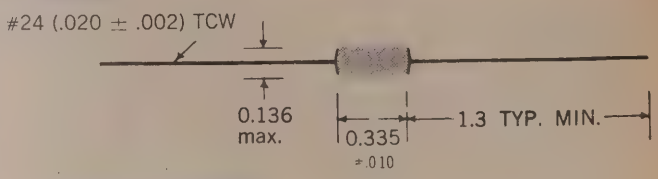
Inductors

SUPER WEE-WEE-DUCTOR

An Ultra-Reliable molded shielded inductor. Subminiature size for high density circuits. Great Inductance-to-size ratio. .10 uH to 10,000 uH. 0.136" diameter x 0.335" length. 61 stock values.

The **SUPER WEE-WEE-DUCTOR,** a shielded miniaturized inductor, provides a greater inductance-to-size ratio in a molded epoxy envelope. Use of unique "T" lead construction on all values from 15 uH to 10,000 uH assures exceptional reliability in ranges where fine wire sizes are used. This MS inductor series is designed to meet the stringent requirements of MIL-C-15305 (latest revision). This provides the design engineer with utmost reliability, electrical performance, and minimum coupling in high density packaging.



GRADE 1 CLASS A

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% (Q-Meter).
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured with full length leads on Q-Meter.
Q: Measured on Q-Meter.
Rating: I maximum based on 1/3 watt dissipation.

DENSITY CHARACTERISTICS

Volume: 0.0041 cubic inches.
Weight: 0.50 grams maximum.
Shielding: Less than 3% coupling with two units mounted side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +105°C.
Terminal Strength: Meets five pounds pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).
Moisture, Vibration and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). High Frequency: 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 100G, 6 MS.
Marking: Color coded per MIL-C-15305 (latest revision).

Inductors

WEE-DUCTOR

Miniature Shielded Inductor with high inductance-to-size ratio.
0.10uH to 180,000uH in 76 values
Designed to meet MIL-C-15305B.

The **WEE-DUCTOR** was the first miniature shielded inductor that Nytronics standardized for stock delivery. This encapsulated non-flammable shielded unit in a 0.164" diameter by 0.450" long envelope offers the design engineer extremely high inductance for density packaging. The WEE-DUCTOR is designed to meet the environmental requirements of MIL-C-15305 Rev. B. **GRADE 2 CLASS B**

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.1 to 22uH ±10% (Q-Meter); 27uH to 1,000 ±5% (1KC Bridge); 1,200uH to 56,000uH ±10% (1KC Bridge) 68,000uH to 180,000uH ±20% (1KC Bridge) measured at point on leads ½ inch from body.

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_o to be not less than 80% of published data, and measured with full length leads on Q-Meter.

Q: Measured on Q-Meter.

Maximum Current: Based on temperature rise not to exceed 40°C at 85°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0087 cubic inches **Weight:** 0.75 grams maximum
Shielding: Less than 3% coupling with two units measured side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.
Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305B.
Marking: Printed with pertinent data.

Inductors

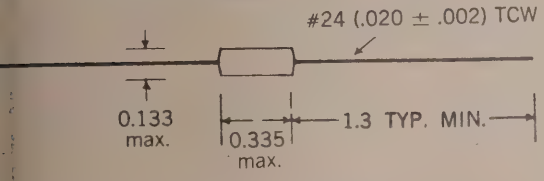
WEE-WEE-
DUCTOR SERIES

The smallest shielded inductor for high density circuits 0.10 to 1,000 uh 0.133" diameter x 0.335" length. We have 49 stock values.

GRADE 2 CLASS B

The **WEE-WEE-DUCTOR** offers the Design Engineer a subminiature shielded inductor to solve special problems in density circuit application. This shielded inductor has great inductance-to-size ratio and is designed to meet the stringent requirements of MIL-C-15305 Rev. B.

0.10 to 10,000uH
0.133" diameter x 0.335" length
49 stock values



ELECTRICAL CHARACTERISTICS

Inductance Tolerance:	±10% (Q-Meter).
Dielectric Strength:	700 volts RMS at sea level.
Self-Resonant Frequency:	Minimum f_o to be not less than 80% of published data, and measured with full length leads on Q-Meter.
Rating:	I maximum based on ⅓ watt dissipation.

DENSITY CHARACTERISTICS

Volume:	0.0041 cubic inches.
Weight:	0.50 grams maximum.
Shielding:	Less than 3% coupling with two units mounted side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature:	−55°C to +125°C.
Terminal Strength:	Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).
Marking:	Color coded per MIL-C-15305 (latest revision).

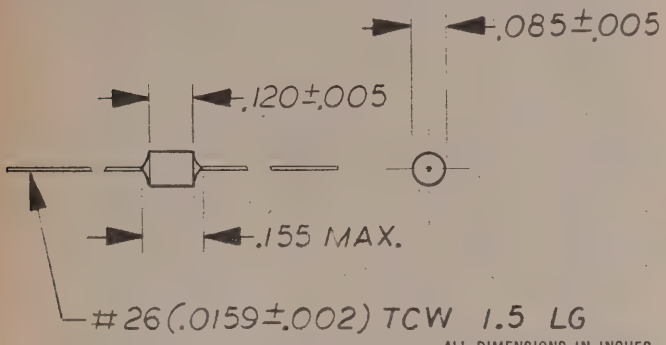
Inductors

PEE-WEE SERIES

The amazing **PEE-WEE DUCTOR** represents a 66% size reduction from the smallest magnetically shielded axial leaded inductor series heretofore available anywhere. Furthermore, this size reduction was obtained with negligible loss of electrical performance by employing several unique concepts in RF coil design.



ALL DIMENSIONS IN INCHES

ELECTRICAL CHARACTERISTICS:

Inductance Tolerance: ± 10% (Std).

L,Q,F, values: Measurements per MIL-C-15305. (latest revision).

Incremental Current: Incremental current in table is for 5% reduction in inductance value.

Dielectric Strength: 300 Volts RMS @ Sea Level.

*SRF minimum not less than 80% of specified values.

DENSITY CHARACTERISTICS:

Volume: .0007 Cubic Inches

Weight: 0.12 Grams

Shielding: 5% maximum coupling for two units side by side.

Marking: EIA color coded

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS:

Terminal pull: 3 lbs. minimum.

Environmental: Grade 2 Class A

OPTIONS:

Inductance Values: Additional Inductance Values from .025 uH up to 10,000 uH available on special order.

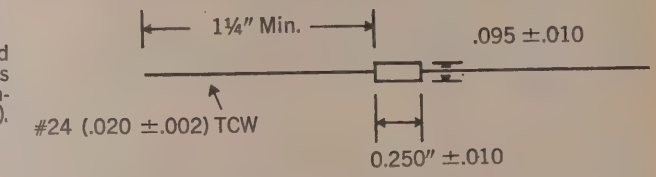
Inductors

DECI-DUCTOR

New Subminiature Inductor 0.10uH to 1000uH Range
0.100" diameter by 0.250" length 49 STANDARD VALUES

The **DECI-DUCTOR** offers the design engineer epoxy-molded reliability and uniformity in a subminiature R.F. Inductor. This Nytronics R.F. Inductor line is designed to meet all the environmental specifications of MIL-C-15305 (latest revision).



GRADE 2 CLASS B

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% over entire range.
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Rating: Maximum Current based on 35°C rise in 90°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.002 cubic inches **Weight:** 0.35 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C

Terminal Strength: Meets three pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), 10 cps to 2000 cps @ 15 G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS (body mounted).

Marking: Color coded per MIL-C-15305 (latest revision).

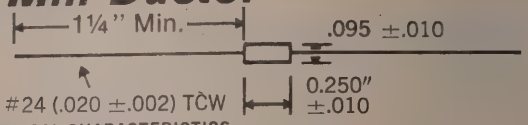
Inductors

Mili-Ductor



—MS INDUCTOR SERIES 75083, 75084, 75085 MOLDED INDUCTOR/0.100 uh to 1000 uh

Markings: Color coded per MIL-C-15305 (Latest Rev.)

The MS Inductor Series are RF Inductors specifically designed to meet the demanding requirements of MIL-C-15305 (latest revision). This MS Series is Epoxy Molded enveloped features reliability and uniformity in a Subminiature Inductor.

ELECTRICAL CHARACTERISTICS
Inductance Tolerance: ±10% over entire range.
Dielectric Strength: 1000 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Rating: Maximum current based on: 35°C rise in 90° ambient for phenolic, 15°C rise in 90° ambient for iron, 35°C rise in 70° ambient for ferrite core inductors.

DENSITY CHARACTERISTICS
Volume: 0.002 cubic inches; **Weight** .030 grams.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS
Operating Temperature: —55°C to +125°C phenolic core, —55°C to +105°C iron and ferrite core.
Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).
Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. **Shock:** 100G, 6 MS (body mounted).

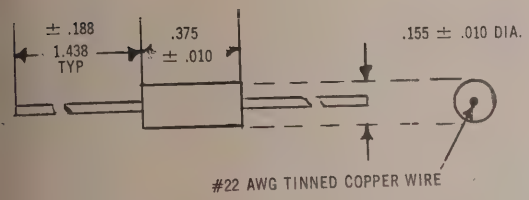
Inductors

RFC-SS SERIES

Molded inductors specifically designed to meet MIL-C-15305 (latest revision). Inductance from 0.15 to 240uH.

GRADE 1 CLASS A (0.15-4.7)
CLASS B (5.6-240)



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.15 to 33 uH ±10%
36 to 240 uH ±5%
Measured on Q meter per MIL-C-15305 (latest revision).

Dielectric Strength: 1000 volts RMS @ sea level

Rated Current: Based on max. temp. rise of 35°C (ambient 90°C) for RFC-SS-0.15 to 4.7
15°C (ambient 90°C) for RFC-SS-5.6 to -240

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: Max. 125°C for RFC-SS-0.15 to -4.7
Max. 105°C for RFC-SS-5.6 to -240

Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), high frequency 10 cps

Printing: Color banded.

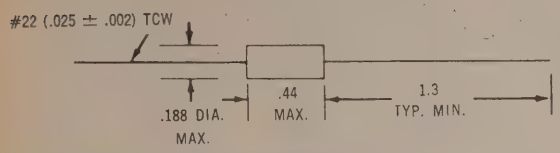
Inductors

RFC-S SERIES

Proven reliability molded inductors specifically designed to meet MIL-C-15305 (latest revision). Inductance 0.1 to 1000uH.

GRADE 1 CLASS B

ACTUAL SIZE



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.1 to 22uH ±10% on Q-Meter
27uH to 100 ±5%
1,000 cps bridge
120uH to 1000uH ±5% on Q-Meter

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_o to be not less than 80% of published data and measured with full length leads on Grid-Dip Meter.

Q: Measured on Q-Meter.

Rating: ⅓ watt dissipation for series S

DENSITY CHARACTERISTICS

Volume: 0.012 cu. in.

Weight: 0.90 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +125°C.

Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 Grade 1, Class B. High frequency 10 cps to 2000 cps @ 30G ±10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)

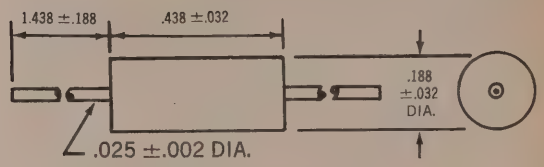
Inductors

MS-INDUCTOR SERIES 75008-75101-90539 MOLDED INDUCTOR



ALL DIMENSIONS IN INCHES

Proven reliability molded inductors designed to meet MS75008 and MIL-C-15305 (latest revision). Inductance 0.15 to 1000 uh.

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.15 to 0.47 uhy ±20%; 0.56 to 1000 uh ±10%
Dielectric Strength: 1000 Volts RMS at sea level
Max. Temp. Rise: 35°C

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.
Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).
Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). High frequency 10 cps to 2000 cps @ 20G ±10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)
Volume: S Type — 0.012 cu. in.
Weight: S Type — 0.90 grams
Marking: Color banded per MIL-C-15305 (latest revision).

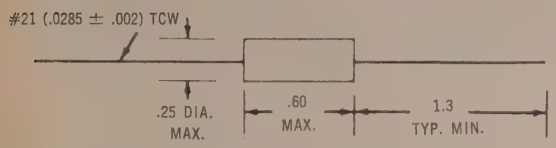
Inductors

RFC-M SERIES

Proven reliability molded inductors specifically designed to meet MIL-C-15305 (latest revision). Inductance 1.0 to 2200uH.

GRADE 1 CLASS B

ACTUAL SIZE



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 1.0 to 22uH ± 10% on Q-Meter
27uH to 2200 ± 5%
1,000 cps bridge

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_0 to be not less than 80% of published data and measured with full length leads on Grid-Dip Meter.

Q: Measured on Q-Meter.

Rating: ⅓ watt dissipation for series M

DENSITY CHARACTERISTICS

Volume: 0.029 cu. in.

Weight: 2.00 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +125°C.

Terminal Strength: Meets five pound pull test per MIL-C-15305.

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). High frequency 10 cps to 2000 cps @ 30G ±10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)

Inductors

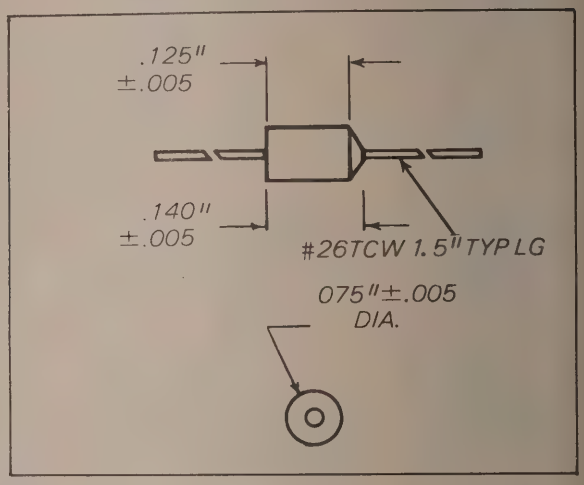
Pee Dee Ductor Series

Marking: EIA color coded



The Pee Dee Ductor is a new, microminiature, axial-leaded RF inductor for hybrid circuit applications. It is significantly smaller than any unshielded inductor available anywhere. performance inductor has a standard inductance tolerance of ±10%. Values below 0.1 uh and above 1000 uh are available on special order.

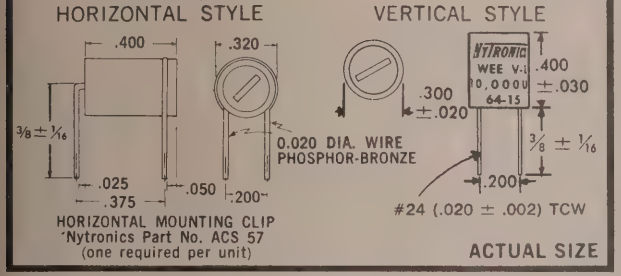
VARIABLE INDUCTORS

WEE V-L

NOW MIL APPROVED MIL-C-15305 (latest revision) — MS21381 & MS21402
Subminiature Shielded Adjustable Inductor
High Q Values
Vertical or Horizontal* Mounting
Unitized Epoxy-Molded Construction
0.400″ by 0.300″
0.10 to 100,000uH



The **WEE V-L** is designed to accommodate close inductance adjustments in high-density circuits that demand exceptional stability and high "Q" in the smallest size available. The **WEE V-L** is qualified MIL-C-15305 (latest revision). Printed board mounting is facilitated by 0.200 grid spacing and unit has shield construction to allow maximum density packaging. Standardized in 73 stock values.

ELECTRICAL CHARACTERISTICS

Adjustable Inductance Range:	±10%† over entire range as measured per MIL-C-15305 (latest revision).
Q and f_o Values:	Minimum not less than 80% of specified value at L nominal.
Dielectric Strength:	840 Volts R.M.S. at sea level.
Working Voltage:	300 Volts D.C.
Maximum Current:	Based on temperature rise not to exceed 15°C at 90°C ambient.
Incremental Current:	Defined as the DC current required to cause a five percent reduction in the nominal inductance value.

DENSITY CHARACTERISTICS

Weight:	1.5 grams maximum
Volume:	.0346 cubic inches
Shielding:	3% coupling maximum when two units are tested side by side.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Use Nytronics Tuning Tool No. B-469 or equal.

Torque:	0.75 to 6.0 inch-oz.
Operating Temperature:	−55°C to +105°C.
Moisture, Vibration, and Shock Resistance:	Meet requirements of MIL-C-15305 (latest revision).
Marking:	Manufacturer data printed.
Terminal Pull:	Three pounds.

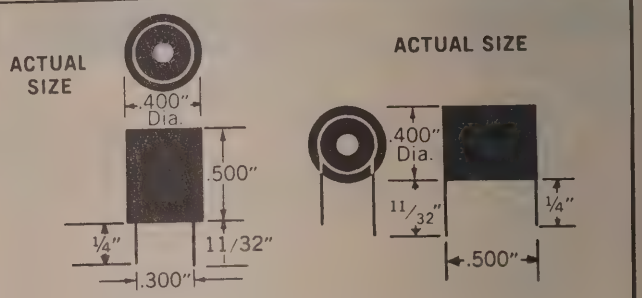
VARIABLE INDUCTORS

VIV-VIH

Miniature with inductance range of 0.10 to 4700uH in 29 values.
Encapsulated in epoxy resin for reliability.
Designed to meet MIL-C-15305 (latest revision).



Terminal Leads #22 (.025 ± .002) VCW

VERTICAL STYLE HORIZONTAL STYLE

The **VARIABLE INDUCTOR** offers high reliability and exceptional stability over extreme temperature variations. This small lightweight unit is furnished in vertical and horizontal styles to facilitate mounting on printed circuit boards. The unit is designed to meet the requirements of MIL-C-15305B.

GRADE 2 CLASS B
ELECTRICAL CHARACTERISTICS

Inductance Range: 0.33 to 4700uH Tunable Range ±20%
0.15 to 0.22uH Tunable Range ±15%
0.1 Tunable Range ±10%
All measurements at 25°C on Q-Meter using miniature alligator clips mounted 1/32" from body.
Q values min. not less than 80% of specified value.

Self-Resonant Frequency: Minimum f_o to be not less than 80% of published data as measured with Grid-Dip Meter.

DENSITY CHARACTERISTICS

Volume: 0.063 cubic inches

Weight: 2.6 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Torque: 0.75 to 5.0 inch-ounces
Use Nytronics Tuning Tool No. B-305 or equal.

Operating Temperature: −55°C to +125°C

Terminal Strength: Meets five pound pull tests.

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). Low frequency 10 cps to 55 cps @ .06" total excursion at rate of 1 linear sweep per minute for 2 hours repeated for each of 3 mutually perpendicular planes. Shock: 50G, 11ms.

Core Material: Iron

Marking: Manufactured data printed.

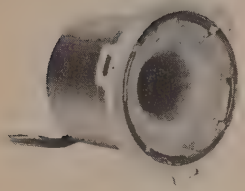
syntronic

SYNTRONIC INSTRUMENTS, INC.
100 Industrial Road, Addison, IL 60101



MILITARY/AIRBORNE/SHIPBOARD YOKES
Compact, lightweight, ruggedized yokes designed to withstand the rigors of environmental stresses. Typical applications include TV raster scans, HUD, HDD, alphanumeric, cockpit displays as well as military ground support and shipboard displays.

COMMERCIAL YOKES
Extensively tooled for volume production reflecting excellent cost effectiveness. Ideal for all variations of CRT terminals including alphanumeric computer output displays, medical waveform and video. Can be supplied with built-in geometry correction and beam centering provisions.

SPECIAL YOKES
Designed to solve unusual problems in unique displays such as phototypesetting, random graphics, vectors, line scan, monochrome or color projection simulators, and applications demanding accurate beam positioning, superior focus, and zero astigmatism.

YOKE APPLICATION CHECKLIST

This handy "Yoke Application Checklist" facilitates working out your exact requirements in designing a cathode ray tube (CRT) display.

CRT displays consist of three essentials:

The display format
The yoke/CRT unit
The deflection circuit

The display format incorporates the size, shape and general make-up of the data to be displayed. (See examples below.) Yoke design objectives are directed toward the display format requirements.

The yoke/CRT combination should be considered a unit and as such, essential to the achievement of display quality.

The deflection circuit to be chosen follows a tentative selection of the yoke/CRT combination. Use of existing electronics might at first appear to be good value engineering but this limits the choices available in yokes and CRTs, which can cause the total system to be less than optimum.

The necessary display information to be considered in specifying the yoke includes the data to be displayed, horizontal and vertical display dimensions, spot size and geometric correction requirements.

CRT DATA

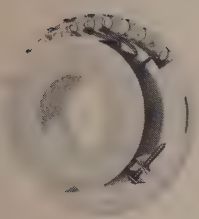
Manufacturer
Type Number
Size
Shape: round, rectangular, square
Max. diagonal deflection angle
Neck diameter
Anode voltage (KV)
Focus mode
  Low voltage electrostatic
  High voltage electrostatic
  Electromagnetic
  Dynamic
Line width
Center spot size
Jedec neck gauge number
Inside faceplate radius of curvature
YRL to gun distance
Is CRT shield used

YOKE

Max. inductance (μH): Horizontal (x), Vertical (y)
Max. resistance (Ohms): Horizontal (x), Vertical (y)
Single-ended or push-pull
PM Beam centering magnets
EM Beam centering coils
PM Pincushion correction magnets
Enclosed housing
Potted (Generally required for military)
General classification of display:
  Military
  Commercial
  Industrial/Special

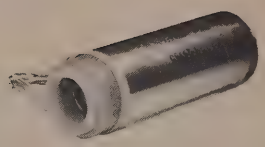
SCAN

Horizontal
Vertical
Resonant sweep
OP AMP/Driven sweep
Sweep rate or trace/Stroke time
Min. retrace time
Settling/recovery time
Max. voltage across coils
Max. current for deflection (ma)

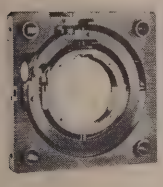


Y3802 YOKE
CHARACTER WRITING
Stator Ferrite Core. High frequency yoke provides effective way to produce display characters and symbols independent of main yoke. Mounts directly behind Y38 series of yokes. Low inductances as required.

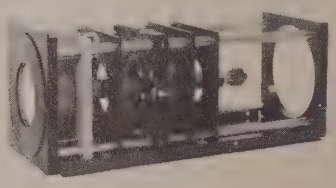
F50/55 FOCUS COILS
Static/Dynamic shielded units designed for electromagnetically focused precision displays where high resolution is required anywhere on the screen. Fits 38 mm (1½") neck diameter CRTs.



VIDICON
Complete package for ⅔" Vidicon -Plumbicon. Front or rear loading. Printed circuit deflection coils. Self-contained focus and alignment coils ...also full line of 1" Vidicon Yokes available.



MODEL D7450/7675
MICROPOSITIONER
COIL/LENS ALIGNER
For yokes and coils. Minimum backlash; fine adjustment of pitch, yaw, horizontal and vertical translation. Positive lock for each function without interaction.
D7450 for 3.5" O.D. Coils
D7675 for 4.0" O.D. Coils



CRT MOUNTS
Made for any size CRT. Fitted with micropositioner and magnetic shielding—rugged mount for bench or mobile applications.

It is impractical to attempt to catalog the variety of deflection yokes Syntronic Instruments, Inc., has designed and produced to satisfy thousands of unique specifications. Any yoke can be tailored to match specific objectives such as resolution, sensitivity, geometry, etc. and can be supplied in any inductance, single-ended or push-pull.

PM and EM accessories available for Beam Centering, Pincushion Correction, Astigmatism Correction to fit basic CRT neck diameters.

When the electronics industry needed high quality precision components for CRT display systems, Syntronic Instruments was able to provide the technology. As a manufacturer of precision yokes, coils and related components, Syntronic enjoys a substantial share of the deflection component market and has acquired an industry-wide reputation for its quality engineering and ability to manufacture these devices in any quantity.

Quality control with such components is imperative. Syntronic engineers have designed and built much of the test equipment for these precision instruments and consistently lead in the development of new test equipment.

Today's requirements for high resolution, solid-state driven, high-speed displays require continuing effort to advance the design of deflection components. Syntronic Instruments' experienced engineering group provides such present-day technology to every application.

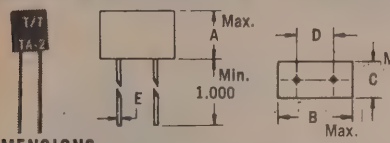
MINI-L ENCAPSULATED R.F. INDUCTORS — TA, TF, TB & TD SERIES



DIMENSIONS

Series	A	B	C	D	E	Max. Power
TA	.225	.210	.110	.100	.020	0.2 Watt
TB	.300	.280	.160	.200	.025	0.33 Watt
TD	.390	.390	.197	.200	.025	0.5 Watt
TF	.225	.210	.110	.100	.020	0.2 Watt

TA SERIES

- MIN. "Q": 60 to 70.
- INDUCTANCE RANGE: .1 uh to 10 uh.
- FREQUENCY RANGE: 1 to 50 MHz.
- INDUCTANCE TOLERANCES: Less than 1.0 uh, ±10%. Greater than or equal to 1.0 uh, ±5%. Closer tolerances available by special request.
- INDUCTANCE TC: +50 PPM/°C maximum.
- MAXIMUM POWER DISSIPATION: 0.2 watt.

TF SERIES

- MIN. "Q": 60 to 80.
- FREQUENCY RANGE: 20 to 300 MHz.
- INDUCTANCE RANGE: .01 to 1 uh.
- INDUCTANCE TOLERANCES: Less than 0.1 uh, ±20%. Greater than or equal to 0.1 uh, ±10%. Closer tolerances available by special request.
- INDUCTANCE TC: +200 PPM/°C maximum.
- MAXIMUM POWER DISSIPATION: 0.2 watt.

TD SERIES

- MIN. "Q": 40 to 80.
- INDUCTANCE RANGE: 100 to 10,000 uh.
- RECOMMENDED FREQUENCY RANGE: 50 kHz to 10 MHz.
- INDUCTANCE TOLERANCE: ±5%. Closer tolerances available by special request.
- INDUCTANCE TC: From +60 PPM/°C, maximum to +300 PPM/°C maximum, depending upon inductance value.
- MAXIMUM POWER DISSIPATION: .50 watt.

TB SERIES

- MIN. "Q": 50 to 80.
- RECOMMENDED FREQUENCY RANGE: 50 kHz to 35 MHz.
- INDUCTANCE RANGE: 10 to 1,000 uh.
- INDUCTANCE TOLERANCE: ±5%. Closer tolerances available by special request.
- INDUCTANCE TC: From +60 PPM/°C maximum to +300 PPM/°C maximum, depending upon inductance value.
- MAXIMUM POWER DISSIPATION: .33 watt.

- DESIGNED TO MEET THE REQUIREMENTS OF MIL-C-15305, GRADE 1, CLASS B (−55°C to +125°C). +125°C).
- DIELECTRIC WITHSTANDING VOLTAGE: 700 volts rms.
- RATED TEMPERATURE RISE: 35°C at an ambient temperature of 90°C.
- LEADS: Tinned Copper. Weldable leads available by special order.

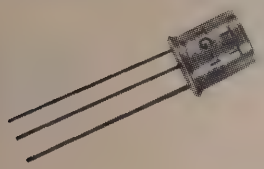
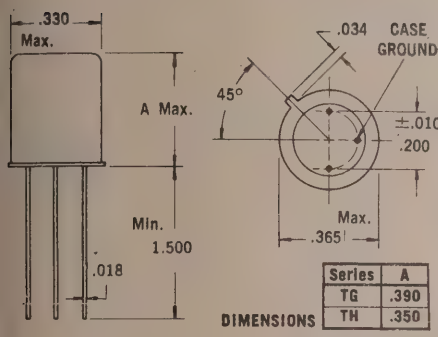
MINI-L HERMETICALLY SEALED R.F. INDUCTORS — TG, TH SERIES





Series	A
TG	.390
TH	.350

DIMENSIONS

TG SERIES

- DESIGNED TO MEET THE REQUIREMENTS OF MIL-T-27, GRADE 4, CLASS S.
- FREQUENCY RANGE: 10 to 500 kHz.
- INDUCTANCE RANGE: 1 to 500 mH.
- INDUCTANCE TOLERANCES: ±5%.
- INDUCTANCE STABILITY: ±2% (−20°C to +85°C.)

TH SERIES

- DESIGNED TO MEET THE REQUIREMENTS OF MIL-C-150305, GRADE 1, CLASS 0.
- FREQUENCY RANGE: 100 kHz to 10 MHz.
- INDUCTANCE RANGE: 10 uH to 1000 uH.
- INDUCTANCE TOLERANCES: 10 uH through 33 uH ±10%, 39 uH through 130 uH ±5%, greater than and including 150 uH ±3%.
- INDUCTANCE STABILITY: ±2% (−20°C to +85°C.)

TG SERIES

- HERMETICALLY SEALED, HIGH "Q" INDUCTOR IN A TO-5 TRANSISTOR CONFIGURATION.
- LOW EXTERNAL MAGNETIC AND ELECTROSTATIC FIELD.

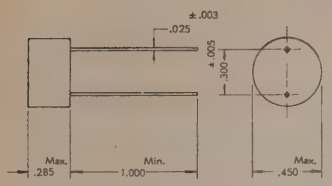
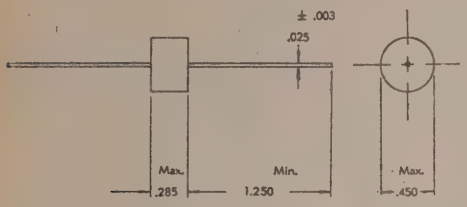
MINIATURE

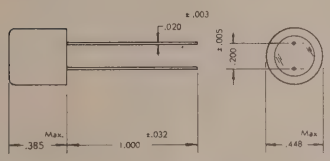
When ordering add the prefix **P, PA** or **M** to the part number for the case type desired.



TYPE P
Epoxy Encapsulated
MIL-T-27C, Grade 5, Class 5



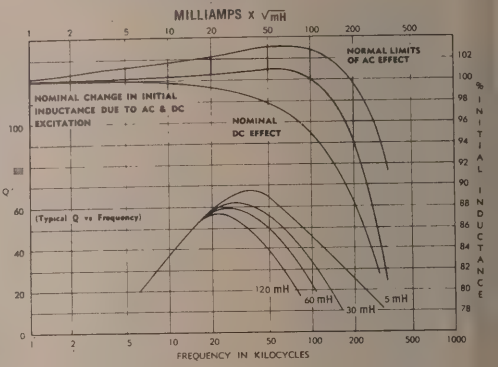
TYPE PA
Axial Leads
Epoxy Encapsulated



TYPE M
Metal Cased
MIL-T-27C, Grade 4, Class R

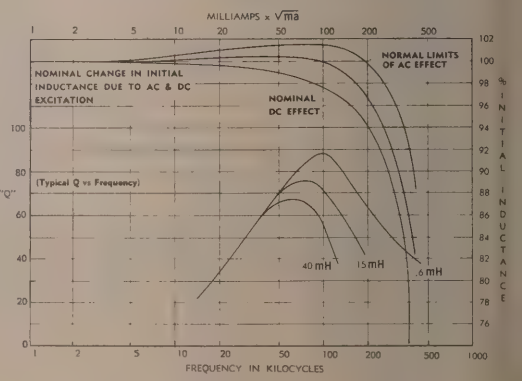
CORE NO. 03

- Recommended Frequency: Up to 50 kHz
- Maximum Inductance: 250 mH
- Tolerance: ±1.0%. Distributor Item ±2.0%
- Typical DCR: 1.5 ohms/mH



CORE NO. 13

- Recommended Frequency: 10 kHz to 200 kHz
- Maximum Inductance: 100 mH
- Tolerance: ±1.0%. Distributor Item ±2.0%
- Typical DCR: 3 ohms/mH



CORE NO. 29

- Recommended Frequency: 50 kHz to 5 MHz
- Maximum Inductance: 15 mH
- Tolerance: ±1.0%. Distributor Item ±2.0%
- Typical DCR: 20 ohms/mH

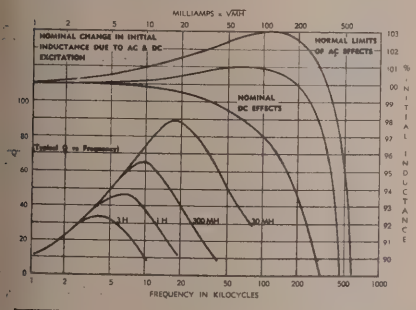
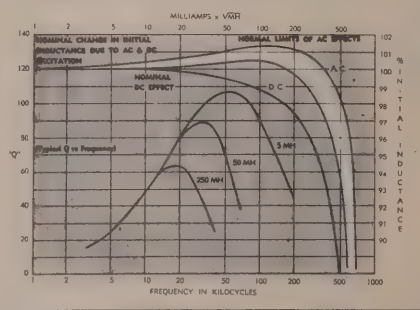
CORE NO. 50

- Recommended Frequency: Up to 20 kHz
- Maximum Inductance: 4.5 H
- Tolerance: ±1.0%. Distributor Item ±2.0%
- Special Core Stabilization Available: D, L, M, W
- Mechanical Tolerance: ±.015 (,38) unless otherwise indicated
- Typical DCR: 536 ohms/H



CORE NO. 51

- Recommended Frequency: 10 kHz to 100 kHz
- Maximum Inductance: 1 H
- Tolerance: ±1.0%. Distributor Item ±2.0%
- Special Core Stabilization Available: D, M, W
- Mechanical Tolerance: ±.015 (,38) unless otherwise indicated
- Typical DCR: 1.2 ohm/mH



CORE NO. 53

- Recommended Frequency: 50 kHz to 8 MHz
- Maximum Inductance: 20 mH
- Tolerance: ±1.0%. Distributor Item ±2.0%
- Only Core Stabilization Available: H
- Mechanical Tolerance: ±.015 (,38) unless otherwise indicated
- Typical DCR: 10.1 ohm/mH

TYPE M
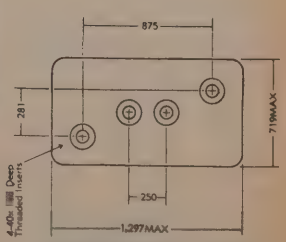
Wt. 3.5 oz.



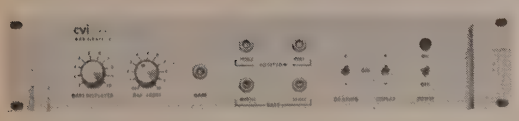
Maximum Height 1.750

† Add "C" to part number of molded inductor if clearance hole is desired. * Distributor Item P Series Only.

short form catalog

cvi COLORADO VIDEO INCORPORATED • DEPT. EM, P.O. BOX 928 • BOULDER, COLORADO 80306 • U.S.A.
PHONE: (303) 444-3972 TWX: 910-940-3248 • COLO VIDEO BDR

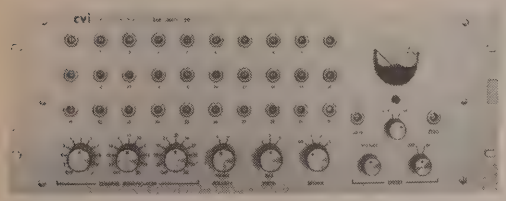
Bar Graph 101



Accepts 10 signal inputs and converts these into a vertical "Bar" pattern as seen on the screen of a standard TV monitor. Rack mount, 3½" h.

$1250.

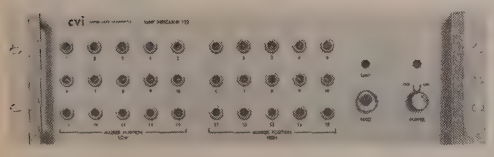
Bar Graph 120



Accepts 30 negative going input signals and produces a horizontal bar display with better than 1% accuracy. Has individual channel markers, zero suppression, decade expansion, and other features. Requires external sync. Rack mount, 7" h.

$4200.

Limit Indicator 122



Produces 15 separate "high" and 15 separate "low" vertical markers with automatic alarm when video falls outside of predetermined limits. Requires external sync. Rack mount, 5¼" h.

$3500.

Video Compressor 260B

Accepts standard composite video signals and performs sampling, digitizing, buffering, and slow scan TV conversion operations. Provides output for direct connection of slow scan signals to voice grade communications circuits. Rack mount, 5½" h. Also includes remote control unit.

$3000.

Video Compressor 262

Similar to the 260B but uses sampling only (8kHz) or sampling plus buffering (1kHz) to perform slow scan conversion. Compact table-top configuration.

$1250.	**262A**	8kHz bandwidth
1500.	**262B**	1kHz bandwidth

Video Digitizer **270A**

Converts standard television signals into digital data for computer processing and control. Can also redisplay data on a standard television monitor for photographic production of hard copy by time exposure. Easily interfaced with modern minicomputers. Rack mount, 5¼" h.

$4000.

Video Expander **275**

A solid state video memory capable of storing one frame of video information. Data may be fed into the 275 at a slow rate, stored, and displayed to present a continuously refreshed image on a standard television monitor screen. The image buildup process may be continuously observed, and there is no fadeout or image degradation with time in the resulting display. The 275 may be used as a computer display device or as a slow scan video communications receiver. For communications applications it is a companion unit for CVI Models 260B or 262 Video Compressors. Available in 256x256 or 256x512 element resolution, 6-bit grayscale. Rack mount, 10½" h.

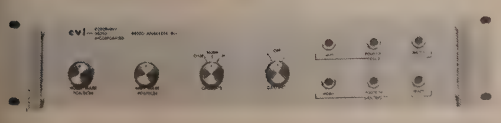
2000.	Frame Grab Option		

Video Transceiver **280**

Combines the functions of digital frame grabbing and slow scan transmission and reception in a single package. Contains 256x512x6 bit solid state video memory using 4K RAMs. Features remote control of functions and dual rate/resolution operation. Rack mount, 10½x10x15".

$12,500.



Video Analyzer **301**

Displays "vertically line-selected" TV waveforms directly on the screen of a normal TV monitor. 1/1 waveform/picture ratio simplifies identification of individual picture elements. Display also includes an electronic reference grating and H and V markers. Requires external sync. Rack mount, 3½" h.

$875.

cvi COLORADO VIDEO INCORPORATED • DEPT. EM, P.O. BOX 928 • BOULDER, COLORADO 80306 • U.S.A
PHONE: (303) 444-3972 TWX: 910-940-3248 • COLO VIDEO BDR

Sync Stripper 302-2

A utility unit producing sync, horizontal drive, vertical drive, and blanking signals derived from a standard composite video source. Allows interconnection and synchronization of video devices to camera or tape recorded signals. Size 9½x6¾x1¾".

$250.

Raster Generator 302-5

Generates very low speed rasters, up to one half hour in duration. Intended for use in recording sampled video information or other low frequency signals in conjunction with a conventional X-Y plotter. Produces pseudo topographical type displays with information vertically deflecting raster lines. Rack mount, 3½" h.

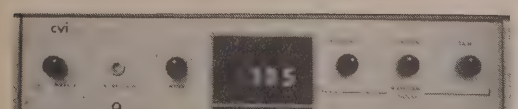
$950.

Motion Detector 304

Samples four independent points in a TV scene and produces an alarm when a change in brightness occurs at any of the sampling points. Operates with standard, composite, video signals. Rack mount, 3½" h.

$1000.

Video Micrometer 305



Designed for dimensional analysis of objects seen by TV camera. Incorporates image enhancement circuitry and a unique video waveform display superimposed on monitor screen for more objective determination of soft or fuzzy edges. Accepts standard video signals. Table top mounting 5¼" h.

$3150.

Video Integrator 310

Produces a D.C. voltage directly proportional to the integral of a video signal falling within a selectable "window" area. Requires external drives. Rack mount, 3½" h.

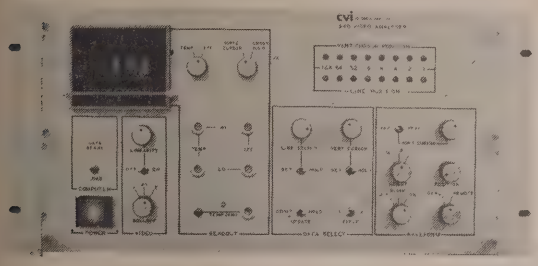
$1500.

cvi COLORADO VIDEO INCORPORATED • DEPT. EM, P.O. BOX 928 • BOULDER, COLORADO 80306 • U.S.A.
PHONE: (303) 444-3972 TWX: 910-940-3248 • COLO VIDEO BDR

Video Analyzer 321

Laboratory version of the 301. Incorporates additional circuitry to allow chart recording of line selected video waveforms X-Y coordinate indication, noise analysis, computer data input, and other features. Rack mount, 3½" h.

$2500.



Video Analyzer 340

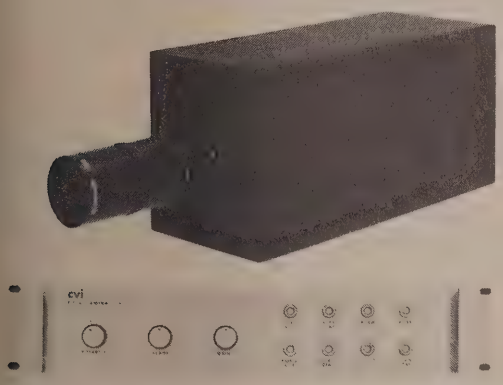
A sophisticated instrument intended to derive objective data from video signals. Functions include digitization of a selected TV line and processing of derived data. Several patterns are superimposed over input video for simplification of analysis. Rack mount, 8¾" h.

$14,500.

Video Analyzer 350

A low cost instrument for display of TV waveforms directly on a normal monitor screen, eliminating the need for a separate CRT display. Similar to the Model 301 but uses a fixed sampling position. Also features a peak video level detection mode. Rack mount, 1¾" h.

$400.



Data Camera 502

A TV camera intended particularly for research or industrial inspection uses. Accepts nearly any 1 inch tube and has various features such as externally controllable sweeps, beam blanking, dynamic gain control, plug-in low pass filters, and very wide range of operating rates. Options include video sampler and digital control of various functions. Camera is three chassis configuration: head, control unit, power supply. Requires external drives, blanking, or deflection voltages.

$4000.

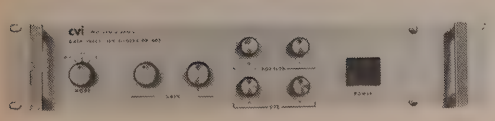
Sync Generator 601-B

A unit intended for laboratory use when either standard or non-standard TV scan rates are required. Uses micrologic binary counters with adjustable feedback paths. Drive and blanking pulses are variable width, but sync is not EIA format. Incorporates dot/bar generator for test purposes. Rack mount, 3½" h.

$1025.

cvi COLORADO VIDEO INCORPORATED • DEPT. EM, P.O. BOX 928 • BOULDER, COLORADO 80306 • U.S.A.
PHONE: (303) 444-3972 TWX: 910-940-3248 • COLO VIDEO BDR

Data Insertion Generator **603**



Combines the functions of a 2 channel video mixer, special effects generator, and video pointer. A moveable oblong is positionable to any point in TV raster and is variable in size over a wide range. The oblong acts as the internal "key" in special effects mode, and also generates a white "box" outline or solid square for marking purposes. Requires external sync. Rack mount, 3½" h.

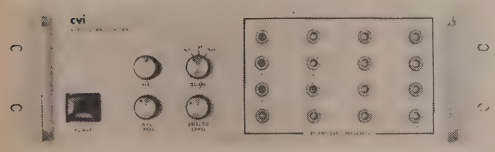
$1250.

Video Processor **604**

Modifies the grayscale of a video input signal by selecting and amplifying a variable width "slice." Also incorporates variable brightness control, sync adding, and external marker adding functions. Requires external sync. Rack mount, 3½" h.

$950.

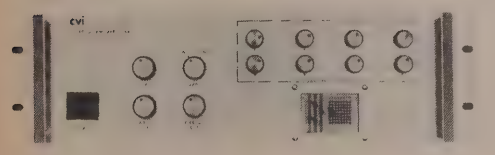
Video Quantizer **606**



Allows the processing of a video input signal into 16 separate amplitude levels. Operates with tape, camera, or disc inputs and allows radical grayscale alterations or the generation of complex synthetic color signals. Rack mount, 5¼" h.

$3500.

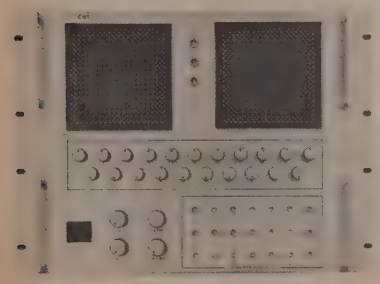
Video Quantizer **606A**



An eight-channel version of the 606, containing a built-in patch panel for the color coding and mixing functions. Produces R-G-B outputs and sync. Rack mount, 5¼" h.

$2500.

Video Quantizer **606C**

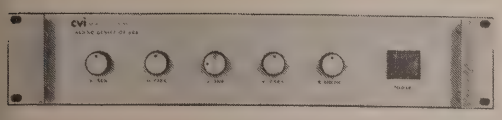


A 21-channel version of the 606, with integral patch panel for achieving a wide range of visual effects. Contains linear video amplifier for mixing input digital with quantized signals. Wide band operation. Rack mount, 14" h.

$5000.

cvi COLORADO VIDEO INCORPORATED • DEPT. EM, P.O. BOX 928 • BOULDER, COLORADO 80306 • U.S.A.
PHONE: (303) 444-3972 TWX: 910-940-3248 • COLO VIDEO BDR

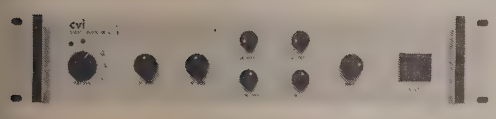
Shading Generator **608**



Generates H and V sawtooth and parabolic waveforms of variable amplitude and polarity to provide compensation of brightness errors in video input signals. May also be used to drive external dynamic correction circuitry. Requires external sync. Rack mount, 3½" h.

$950.

Video Pointer **610E**



Generates five different oblong and/or cross patterns which are positionable to any location on the TV screen. Oblongs can be changed in size over a range of 10 to 1. Unit may be used for marking purposes or for positional measurements. Rack mount, 3½" h.

$1950.

Diameter Analyzer **611**

Contains gating, slicing, and counting circuits to provide automatic measurement of the maximum vertical dimension of a target with moderate to high contrast. Both digital and analog output signals are available. Rack mount, 3½" h.

$1950.

Video Generator **615**

Generates grayscale, grating, dot, window, multiburst, and flat field signals. Multiburst is variable in position for monitor resolution checks, and multiburst frequencies to 20 MHz may be ordered. 615 requires external drives, blanking, and sync. 615A has internal sync generator and supplies video, sync, blanking, and drives. Rack mount, 5¼" h.

$2000. 615
2250. 615A

X-Y Indicator **620**

Generates white cross hairs superimposed over a video input signal. Allows rapid alignment of subject material with a predetermined location when used in conjunction with a standard TV camera and monitor. Accepts composite video on a terminated input and provides composite video out to a standard TV monitor. Size 11x8x 1.65". Mounting: Free standing or rack mount.

$400.

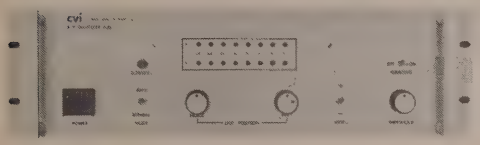
cvi COLORADO VIDEO INCORPORATED • DEPT. EM, P.O. BOX 928 • BOULDER, COLORADO 80306 • U.S.A.
PHONE: (303) 444-3972 TWX: 910-940-3248 • COLO VIDEO BDR

X-Y Indicator 621

Accepts either composite or non-composite video signals and superimposes either a small white dot or set of cross hairs on the video image. Marker may be manually positioned to any location on the raster and two directly proportional DC output signals are generated for analysis of spatial location of subjects. Also contains built-in grating generator for evaluation of input signal quality. Rack mount, 3½″ h.

$1500.

X-Y Digitizer 622



Provides 8 bit digital X-Y coordinates of a small white dot that may be manually located anywhere on a standard TV image. Also incorporates automatic tracking of high contrast targets, and stable grating test signal. Operates from composite video. Rack mount, 5¼″ h.

$4500.

Sync Delay 624

Accepts standard format vertical and horizontal drives and generates drives, blanking, and industrial sync signals which may be delayed by selectable amounts, both vertically and horizontally, from the original drive signals. Rack mount, 3½″ h.

$1250.

Video Detector 630

Provides gating functions combined with high and low video detection circuitry to provide automatic warning when video levels exceed preset limits. May also be operated in a differential mode to provide high sensitivity to small changes in contrast, such as might be produced by spots or hairline cracks. Operates from composite video signals. Standard rack mount, 3½″ h.

$1500.

Video Motion Analyzer 633

Accepts composite video signals and measures lateral motion of a high contrast video target in a selectable portion of the TV signal. Operates in two modes: one-line gate superimposed on target image, or variable gate to blank out all but target profile. Rack mount, 5¼″ h.

$4000.

A few words about Colorado Video, Incorporated.

CVI specializes in the design and manufacture of instruments utilizing video technology. Particular areas of interest include research laboratory instrumentation, industrial inspection and control, computer input/output of television signals, video metrology, image alteration and synthesis, electronic art, scan conversion, and communications involving the transmission of TV pictures over audio grade circuits.

Colorado Video, Incorporated — 3245 Prairie Avenue, Boulder, Colorado USA

CVI instruments are used throughout the world and are available for operation from 50 to 400 Hertz power sources and at various scanning rates. For technical assistance, please contact any of the following:

CVI — Box 928 — Boulder, CO 80306 U.S.A.

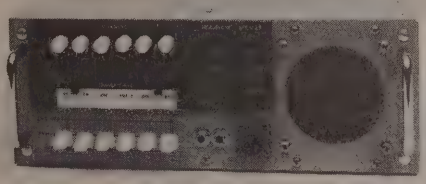
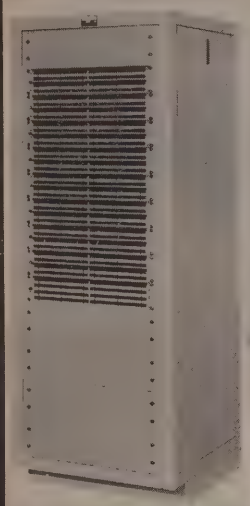
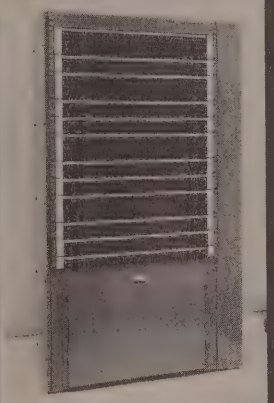
Loudspeaker-Amplifier Panels Single (SLP-4 shown) and dual units available with common or independent AC/DC Integral Power Supplies, or DC inputs. 5-1/4" H X 19" W X 6 " D



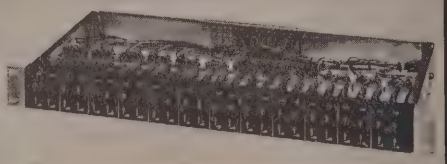
Air Traffic Control Tower Systems•Complete solid state Airport Tower units • FAA, Navy and Air Force approved • Models for 12 VDC, 24 VDC and 48 VDC power • Amplifiers for Tx and Rx circuits.

Mobile Air Traffic Control System AN/MRC-131 • Completely self contained • Provides 1 HF, 2 VHF, 2 UHF, 1 FM channels • Three operator positions • Power from motor alternator, 12 V DC battery, and 110/230 VAC rectifier charger • All frequencies in HF, VHF and UHF Air/Ground bands.



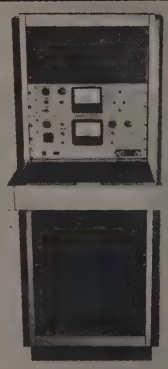


Patch and Test Bays Primary (cable), equal level Circuit and DC Patch Bays complete and ready for installation at site. Also, Patch, Test, Fuse and Distribution bays.

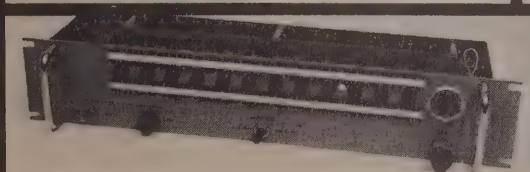


Variable Attenuator Panel - VAP-1230 Provides 12 channels of switchable attenuation from 0 to 30 DB in 2 DB steps, 600 OHMS input and output. 1-3/4" H X 19" W X 9" D. Other impedance and attenuation steps available.

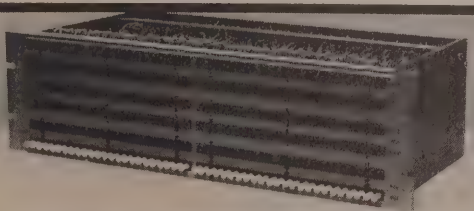
Voice Orderwire Unit TTP-12 • Provides selection 12 channels • Supplied with telephone handset • Adjustable Tx and Rx levels.



Magnet Charger Model 3 LV • High power for industrial users • 11000 watt seconds peak energy • Automatic 10 operations per minute • Available with Monitor Unit • Variable charging voltage 0-500 volts • Model 1 LV also available.



Local Alarm Panel LAP-12 • Model of 12, 24 and 36 points • Red lamp and audible alarm • 110 VAC, 48 VDC and 24 VDC optional power • Solid state construction.



Audio and Digital Patch Panels Miniature and standard telephone jacks in various configurations for telecommunications and computer patch and test facilities available in 2, 4 and 6 wire circuitry for audio; cut key and/or activity indicators for digital.

Supervisory Control, Alarm Systems • Custom designed to your requirements • Up to 256 points control and alarm • Excellent security Double scan with Parity • Computer control and logging available • Single master-multiple remotes • Fully solid state IC construction.

Relay Panel - RPY-20 20 Plug in relays in 1-3/4" of panel space for various applications in communications and control field. A wide variety of voltage and contact arrangements available.

Fuse and Alarm Panel 40 fuses in 1-3/4" H. Panel with visual alarm and contact outputs for remoting alarm. FP-40A for 6, 48, 60-80, 120-130 VDC. F P -40B for 6, 12, 24 and 48 VDC applications.

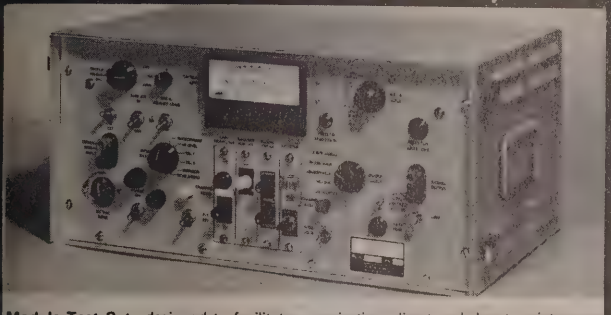
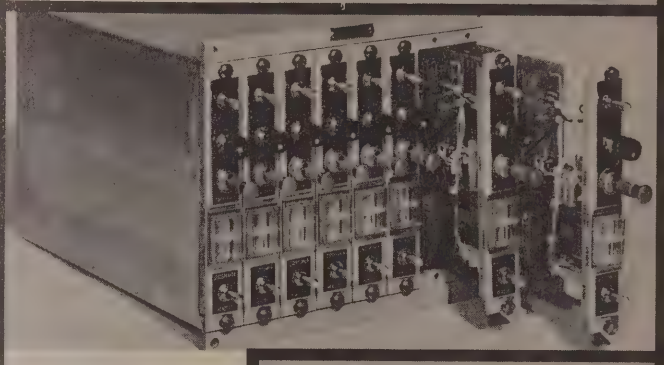
Air Traffic Radio Channel Control Systems 12 VDC, 24 VDC and 48 VDC,—12 and 24 VDC systems include (shown left to right): Jack Unit—audio unit; w/plug-in microphone amplifier/lamp brightner, recorder monitor, and speaker-headphone amplifier modules, — selector unit w/plug-in selector modules — multipin patch panel extender module (foreground). Flight service station selectors, power supply assemblies and supporting test set also shown on this page.

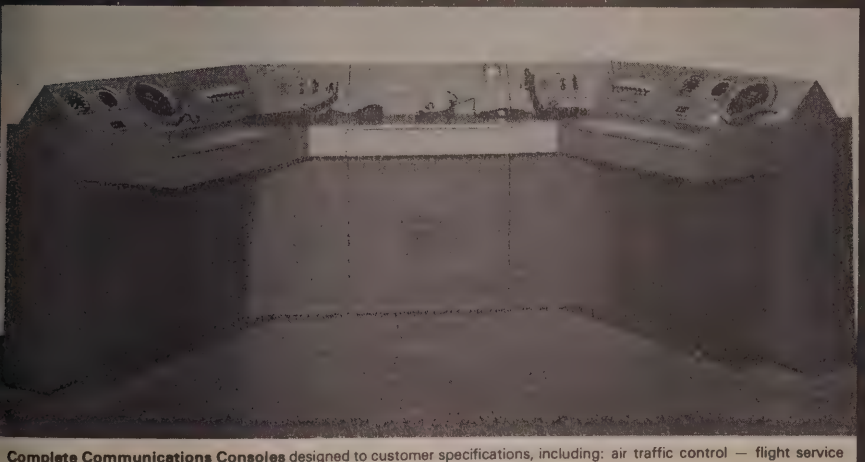
Power Supply Assemblies: Standard models include 12 VDC, 24 VDC and 48 VDC outputs with input @ 115 VAC 50-60 H_z single phase. (Other in/outputs available on request.)



Module Test Sets designed to facilitate organization, direct and depot maintenance levels. The test set provides in/output signals and measurements required to access module performance, used with 12 and 24V radio channel control equipment.

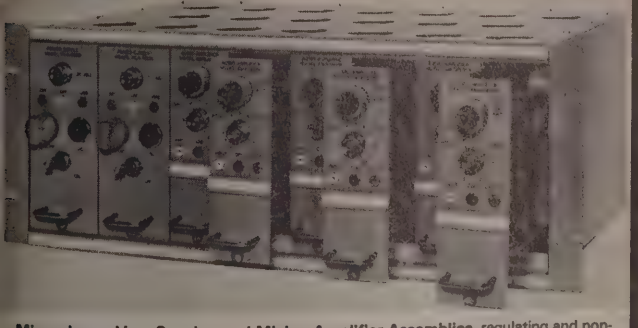


Flight Service Station Selectors provides standard radio channel control functions plus muting and individual volume control features with emergency and locking select and key switch.



Complete Communications Consoles designed to customer specifications, including: air traffic control — flight service stations — police, fire and maintenance dispatcher positions.

Four and Six Channel Main-Standby Transformer Control and Relay Panels — six channel control panel CP-600 shown. Other basic models include RP-600, SSP-400, and RTP-400. These units available in 12, 24 and 48 VDC.



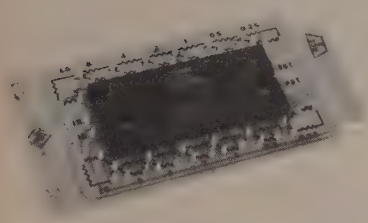
Microphone, Line, Speaker and Mixing Amplifier Assemblies, regulating and non-regulating (6 channel regulating amplifier — AA-6/600B shown)

Additional Systems and Equipment:

- Voice frequency signaling and control system (RCAG)
- Voice frequency signaling system (VOR/VORTAC)
- Receiver selector XFMR
- Receiver muting XFMR
- Receiver selector/mixing XFMR
- Radio headset panel
- Receiver selector, 4 channel
- Receiver volume control panel
- Receiver muting panel

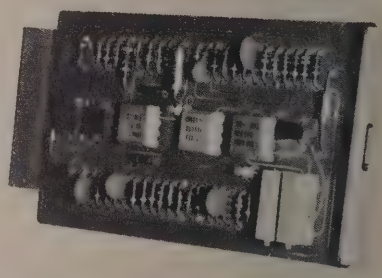
G.R.M. CORPORATION - COMPLETE MANUFACTURING SERVICES FOR OEM PROPRIETARY PRODUCTS

A COMPLETE LINE OF COMPONENTS FOR DATA COMMUNICATIONS SYSTEMS



LINE CONDITIONING & INTERFACE DEVICES

C-303 • Dual strappable 0 to 31.75 DB 600 ohm pads
C-311 • 600 ohm in/out 30 DB data grade line amplifier
C-312 • 2W, 600/10K input speaker amplifier
C-314-XX • Balanced and isolated summing amplifier up to 10 ports
C-315-XX • Balanced and isolated distribution amplifier up to 10 ports

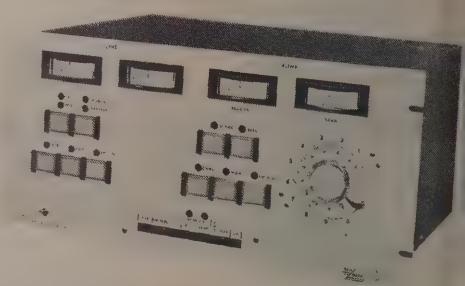


ALARMS—TELETYPE & CARRIER FAULT

C-351 • 45 to 200 Baud distortion/open line alarm
C-353 • Dual carrier detector/alarm
C-354 • Hi/Lo carrier alarm, detects out of tolerance data levels

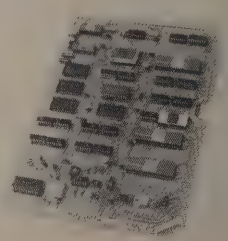
INTERFACE—TELETYPE

C-362 • EIA to TTY convertor 20 or 60 ma, two to four wire option
C-363 • EIA to polar convertor
C-368 • Automatic Loop current regulator adjustable 15 to 70 ma
C-435 • Digital Filter—Virtually eliminates errors on noisy TTY circuits using "UART" receivers
C-460 • Data Delay Motor Start provides up to 1 second of data storage for slow turn on printers such as T.I. Silent 700®... Saves power, extends life.
C-480 • Telex line and trunk test set—test either mechanical or computerized telex exchanges.



NEW! COMPLETE MICRO COMPUTER

CMC-68—Most advanced 6800 type single board computer on the market. Includes: 1K RAM, 32 I/O Ports, ACIA with Telco compatible loop interfaces, DMA Controller, 8 Level priority interrupt control, 4-1KX8 ROM sockets . . . and many more features.



CONTROLS AND SIGNALING

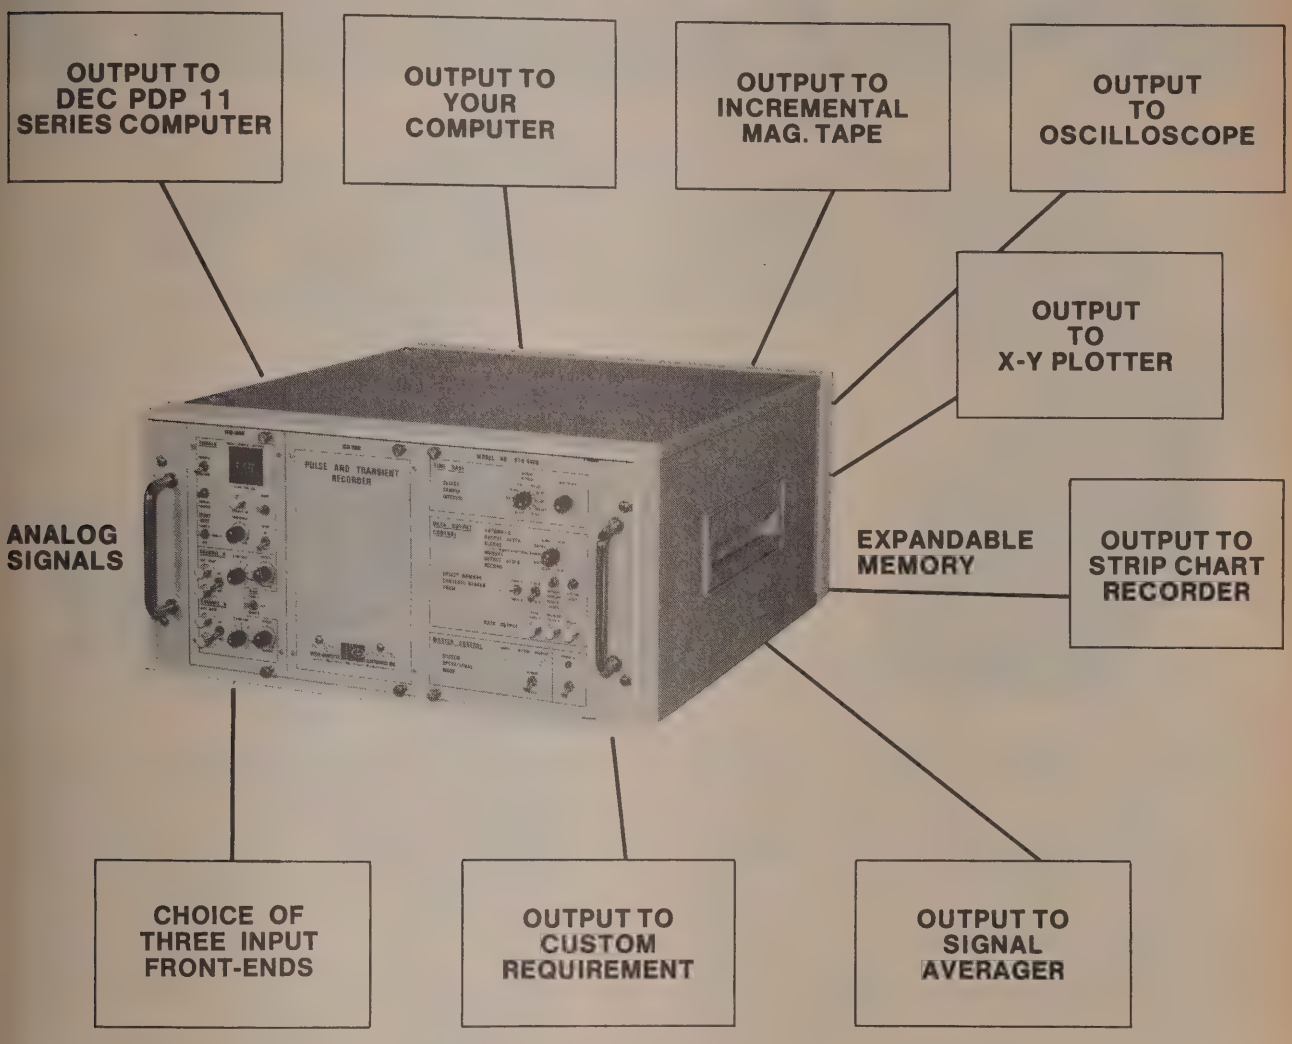
C-324A • Touch Tone® Receiver—Uses latest digital detector
C-325A • Touch Tone® to Dial Convertor—Single card
C-326 • Selective Call—Module for C324A responds to 2, 3 or 4 Digit addresses

NEW!

FP68 • Data Link Encrypter—Meets new FED STD FIBS PUB 46
MSC • Master Slave Clock System—Unlimited remote clocks

RE-EL CIRCUITS INC.
520 VICTOR STREET, SADDLE BROOK, NEW JERSEY / TELEPHONE (201) 843-3738
PRODUCTS FOR COMMUNICATION

HIGH SPEED
TRANSIENT ANALYZERS & SIGNAL PROCESSING SYSTEMS



OUTPUT TO DEC PDP 11 SERIES COMPUTER
OUTPUT TO YOUR COMPUTER
OUTPUT TO INCREMENTAL MAG. TAPE
OUTPUT TO OSCILLOSCOPE
OUTPUT TO X-Y PLOTTER
ANALOG SIGNALS
EXPANDABLE MEMORY
OUTPUT TO STRIP CHART RECORDER
CHOICE OF THREE INPUT FRONT-ENDS
OUTPUT TO CUSTOM REQUIREMENT
OUTPUT TO SIGNAL AVERAGER

FEATURES

- Sampling up to 100 MHz with 8-bit resolution
- Interfaces with I/O of all Computers
- Standard Memory — 2048 words
- Expandable Memory — 8k, 16k and 32k words
- Records transient waveforms and repetitive signals
- Easily interfaced to TTY, printer, or magnetic tapes
- Complete remote of front-panel controls
- Analog output for oscilloscope, plotter and strip chart recorder
- Sampling interval from 10 nanoseconds to 50 seconds
- Split timebase, records two rates per memory record
- X vs Y recording
- Variable pretrigger mode stores data up to total memory capacity for baseline and leading edge of signal analysis

APPLICATIONS

- Laser Processing
- Nuclear Applications
- Medical Applications
- Process Control
- Radar Systems
- Spectral Analysis
- Chemical Analysis
- Electronic and Electrical
- Accelerated Food Processing
- Pollution Monitoring
- X-ray and Gamma Ray Detection
- Alpha, Beta Particle Recording
- Acoustical Analysis

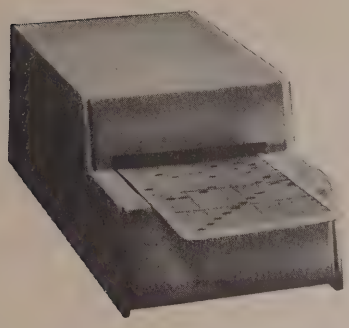
We read your language. AMP card readers cover all

Whether you're going the punched, mark sense, or magnetic card route, there's an AMP product to read it. Or write on it. Or validate it. Or capture it. No other manufacturer offers so broad a line—with so many features and options to meet your needs. No matter how you buy them—as complete, ready-to-use units or as individual components—our wide range of card readers will give you the excellent performance and reliability for which AMP is noted. Use them anywhere—from automation and remote data collection to access control and military applications.

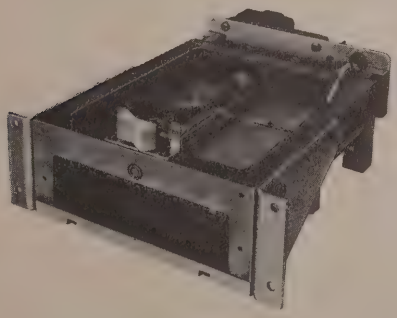


Serial card reader—Model 417.

- Reads punched hole or mark sense data on standard 80-column cards.
- Provides character serial, bit parallel data plus special interface options.
- Cards are automatically returned or captured and stacked at user's option.
- Available with stand-alone housing, or with convenient panel-mounting provisions.

Military static card reader—Model 2972.

- Approved for airborne equipment.
- Accepts standard 80-column paper or plastic punched cards.
- Reliable operation in extreme environments assured by extensive qualification program.
- Manual control eliminates need for external power.
- Great flexibility with a variety of electrical interface options. All input and output terminations are pluggable.
- Outputs compatible with TTL and DTL circuitry.



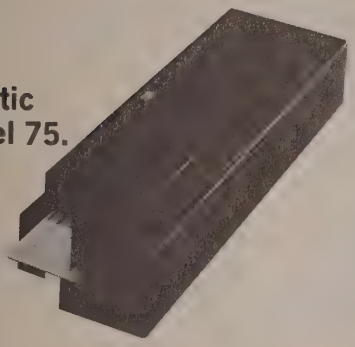
Static tab card reader—Model 2980/81.

- Reads standard 80-column punched tab cards.
- Compact design allows positioning in small panel space.
- Available with parallel outputs, matrix and diode-isolated specials.
- Wipe and back-wipe contact operation has high inherent reliability.
- Available in 80-column and 22-column versions —motorized and manually operated.

Combination static tab card/ badge card reader—Model 144.

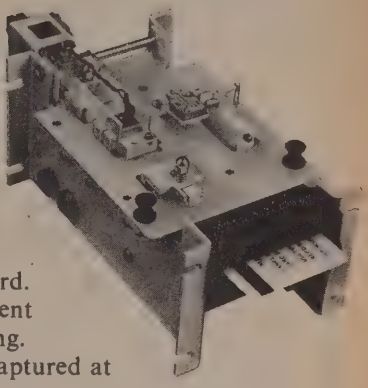
- Accepts standard punched paper 80-column cards and plastic badges.
- Reads numeric or alpha-numeric data up to 12 characters.
- Fully automatic read cycle. Requires no operator control.
- Remote switch design offers reliable operation and long life in industrial environments.
- Completely pluggable interface adapts to "state-of-the-art" wiring techniques.

three major technologies.



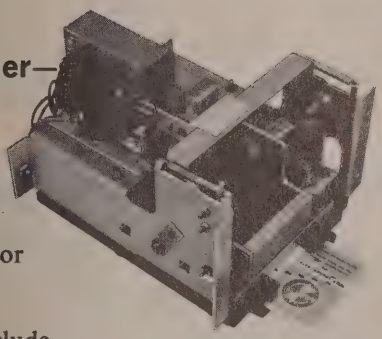
Low-profile magnetic card reader—Model 75.

- Reads IATA and ABA tracks.
- No motor required. Mechanical drive eliminates RF generation.
- Low profile. Suitable for use as a stand-alone accessory.
- TTL outputs are compatible with industry standards for design interface.



Magnetic card reader—Model 210/211.

- Slot design ensures proper orientation.
- Reads and writes at 210 bits per inch, providing as many as 650 bits across the card.
- Designed for convenient behind-panel mounting.
- Card is returned or captured at user's option.
- Adaptable to IATA, ABA and THRIFT track requirements.

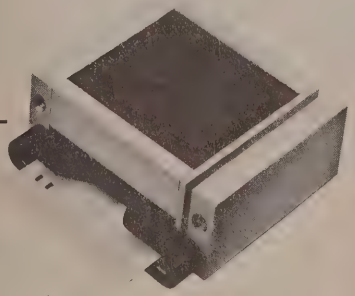


Badge card reader—Model 360/361.

- Reads 12, 20 or 22-column credit or badge cards.
- Solenoid powered or manually operated versions available.
- Output options include numeric, alpha-numeric, parallel and diode matrix.

Special-purpose magnetic readers also available with the following features:

- Read and write on multiple tracks at 300 bits per inch.
- Accept standard plastic credit type cards or a variety of paper stock from .007 to .040 inch in thickness, and 7.25 inches in length.
- Integrated decoding electronics available for TTL logic outputs.
- Fully automatic in operation with provisions to capture or return cards at user's option.
- Designed for behind-panel mounting.



Badge card reader—Model 130.

Maximum reliability, with proven switch design and a minimum of moving parts.
Compact, rugged construction.
Only two major assemblies for long life in severe environments.
Low-temperature operation. Suitable for outdoor use to −40°F.
No external power required. Reader operates with card insertion.
No maintenance required. Designed to operate throughout life without adjustment or preventive maintenance.

We read your language.
You name the card and the application,
AMP has the card reader to match.

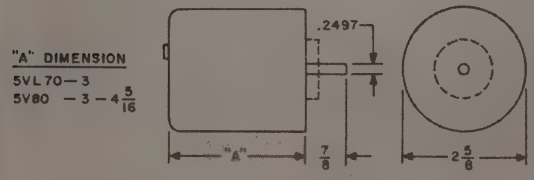
BALDWIN® ENCODERS

A COMPLETE LINE
OF LABORATORY TESTED AND FIELD PROVEN
OPTICAL ANALOG-TO-DIGITAL ENCODERS

5VL70 Series Incremental
5V80 Series Absolute



DOTTED PORTION – LOW TORQUE BEARING ASSEMBLY

Most economical encoders in the Baldwin line.

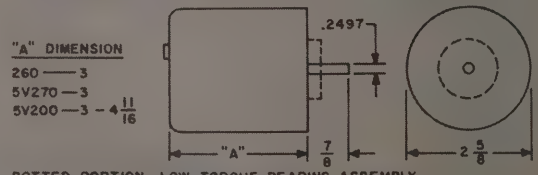
Incremental resolutions to 4096 counts per revolution with zero index available. Quadrature square wave or direction sensed pulsed outputs. Frequency response to 100 Khz. T^2 L compatible.

Absolute resolutions of 0-359, 2^8 , 2^9 , 10^3 and 2^{10} . Parallel outputs in cyclic binary, natural binary or BCD. Photocell or T^2 L compatible signal levels. Reverse count feature is standard. Gating option for sample and hold applications.

All feature single +5V operation, integrated electronics. 5V80 Series features field replaceable incandescent lamp. 5VL70 Series features long-life LED light source, (factory replaceable).

Options: low torque bearings, low inertia and metallized disks, thru shaft, side-exit cable and wide operating temperature range.

260 Series Tachometer
5V270 Series Incremental
5V200 Series Absolute



DOTTED PORTION – LOW TORQUE BEARING ASSEMBLY

These popular encoders offer high resolutions and a wide range of operating features in a small size.

Tachometer resolutions to 10,000 counts per revolution with zero index available. Frequency to 1 Mhz.

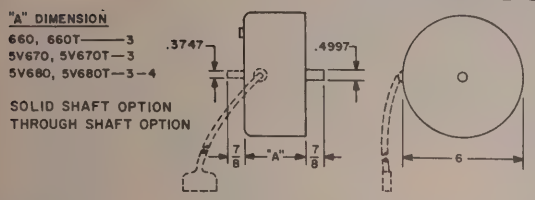
Incremental resolutions to 20,000 counts per revolution with zero index available. Photocell, quadrature square wave or direction sensed pulsed outputs. Frequency response to 100 Khz. T^2L compatible,

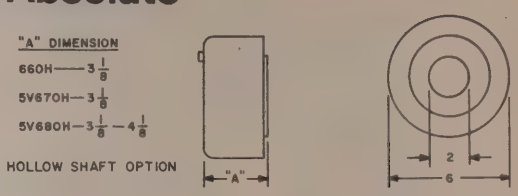
Absolute resolutions of 2^8 thru 2^{14}, 10^3, 0-3599, 10^4. Parallel outputs in cyclic binary, natural binary or BCD. Photocell or T^2L compatible signal levels. Reverse count feature is standard. Gating is optional.

Incremental and absolute encoders feature +5V operation. All have self-contained integrated electronics and easily accessible, single field replaceable lamp.

Options: Ruggedized and low torque bearings, low inertia and metallized disks, side exit cable, wide operating temperature range.

660 Series Tachometer 5V670 Series Incremental 5V680 Series Absolute





Unique in the field of direct reading optical encoders, this group offers a combination of high resolutions, great frequency response and a wide choice of mechanical configurations.

Tachometer resolutions to 24,000 counts per revolution index available. Frequency to 1 Mhz.

Incremental encoders offer resolutions up to 48,000 counts per revolution with or without zero index. Photocell, quadrature square wave or direction sensed pulsed outputs. Frequency response to 100 Khz. T^2L compatible.

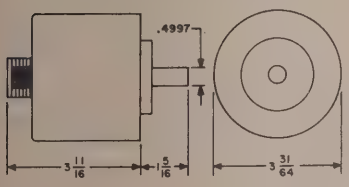
Absolute position encoders have standard resolutions of 2^{14} thru 2^{16}, 10^4 and 0-35999. Cyclic binary formats are offered in photocell or square wave output options. Natural binary or natural BCD outputs are other internal electronics options. Gating option is also available for customer sample and hold applications. Outputs are fully T^2L compatible.

Proprietary circuitry compensates for any changes in photocell levels due to temperature or supply voltage, thereby maintaining original accuracy. Electronic monitor output indicates marginal operation condition or power failure.

Incremental and absolute position encoders in these series feature single +5V operation. All employ integrated circuitry and a field replaceable lamp. Single, thru and hollow shaft designs are standard.

Options: Special bearing designs, serial outputs, wide operating temperature range.

3700 Series Incremental

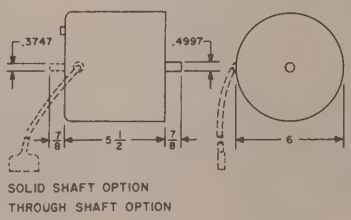


Rugged, high resolution incremental designed expressly for industrial applications.

Encoder is completely sealed against hostile environments. Heavy duty bearings, ½ inch shaft with contacting seal. Vibration immune, single LED light source. Internal integrated electronics with quadrature square wave or direction sensed pulsed outputs from noise rejecting differential line drivers.

Resolutions to 12,700 counts per revolution with zero reference option. Dual inch/metric resolution options have electrically selectable outputs.

690 Series Optical Resolver



This line of Baldwin absolute position encoders uses patented techniques to extend resolutions to 2^{17} thru 2^{20} per revolution while maintaining a 6 inch package diameter.

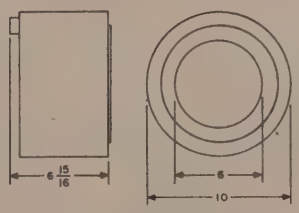
Internal electronics is integrated circuitry. Outputs are T^2L compatible.

Electronic compensation circuitry maintains accuracy for wide changes in temperature or power supply voltages. Dual detection stations cancel effects of bearing errors.

Solid and thru shafts are standard configurations. Lamps are field replaceable.

Options: Serial outputs, CW shaft rotation for increasing count, wide operating temperature range, hollow shaft.

1190 Series Optical Resolver



The 1190 Series with a hollow shaft feature complements the 690 Series optical resolvers. Resolutions of 2^{17} thru 2^{20} are standard.

All features of 690 Series are incorporated in this design. Six inch hollow shaft permits passage of large waveguides or slip ring assemblies.

Construction is all stainless steel for strength and integrity.

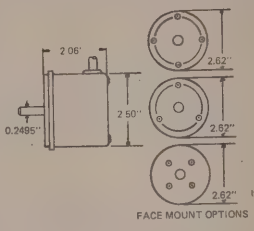
L25 SERIES
INSTRUMENT GRADE INCREMENTAL



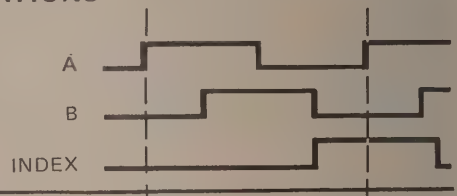
- LOW TORQUE
- ABEC 7 PRECISION BEARINGS
- MANY CABLE AND CONNECTOR OPTIONS
- AVAILABLE WITH DIE CAST COVER

(Send for specification number 924-02004-001)

ELECTRICAL SPECIFICATIONS

BASIC SQUARE WAVE

- Up to 2540 cycles per turn
- Line drivers
- CMOS
- Open collector
- Complementary outputs
- Lamp or LED



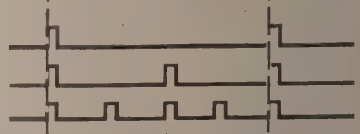
SINE WAVE

- Differential outputs
- Photovoltaic cells
- 100 MV amplitude typical

PULSED MULTIPLICATION
(DIRECTION SENSING)

- Choice of X1, X2, and X4 edge multiplication
- 2.5μ sec pulsewidth, typical
- Up to 10k pulses per shaft turn

(Send for specification number 924-02005-001)

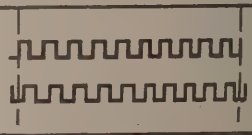


Note: Count pulses appear on one of two output lines, CW or CCW, depending on shaft rotation.

INTERPOLATION

- X2 or X5 count multiplication
- To 12,700 cycles per turn
- Complementary outputs

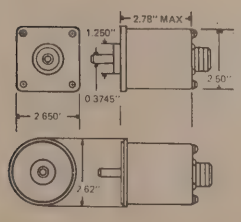
(Send for specification number 924-02007-001)



ENGLISH/METRIC, SELECT

- Provides two resolutions from one encoder; can be used with interpolation (Send for specification no. 924-02011-001)

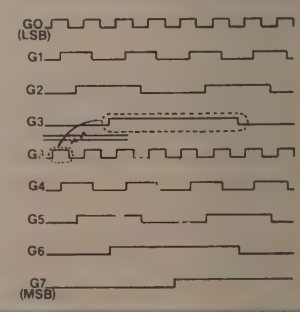
H25 SERIES – HEAVY DUTY 8-BIT ABSOLUTE POSITION



- 8 bit TTL Gray Code output
- Mil-spec connector
- Interrogation
- Open collector output
- Natural binary outputs
- CMOS, line drivers
- Memory (latch)

(Send for specification number 924-02014-001)

GRAY CODE (STANDARD)



CONTROL SYSTEMS FOR RATE AND POSITION

CONTROL UNIT

MOTOR-ENCODER

MICRO-LOC™ SYSTEM

The MICRO-LOC SYSTEM is a microprocessor based digital position servo with velocity control. The servo accepts binary position commands at a rate of 0-50 words per second and drives to the positions without further inputs. The servo follows a software programmed velocity curve depending on application requirements. An extensive line of motor-encoder resolutions is available in both absolute and incremental designs, single turn or multiturn, linear or nonlinear applications. One system controls up to four drive axes depending on application timing requirements. Additional systems are combined for simultaneous control of more than four axes.

ULTRA-LOC™ SYSTEM

The ULTRA-LOC SYSTEM is a new wide range, high accuracy, electronically programmable speed control system. It features high bandwidth at rates below sidereal and full torque at zero speed. The 10,000 to 1 rate range is remotely controllable by computer interface, 8421 BCD format. High performance over a wide speed range is achieved by a carrier-based error loop that is independent of rate. Even at very slow drive rates or zero speed, the error bit update rate of the servo loop is 30 kHz or higher. This eliminates bearing noise, jitter, and cogging associated with slow speed operation.

BEI Precision Optical Encoders with standard resolutions to 2^{20} absolute positions per turn insure basic system accuracy. Standard encoders with integral torque motor provide direct drive capability. Rate drive accuracies of 0.01% per turn are standard; 2^{24} resolution and higher rate accuracies are available on special order.

ULTRA-LOC Systems consist of control unit, motor-encoder, and power supply. Torque capability ranges from 1 lb.-ft. for the 6-inch diameter 690 Series; 40 lb.-ft. for the 1190 Series; and over 100 lb.-ft. for the 2000 Series. These systems are designed to be adapted to existing gimbals, pedestals, or rate tables as retrofit drive systems. **Rate and Position** are controlled by outputs from the position encoder using the customer's computer or by specifying the BEI position control option. A position display to 359.9999 degrees is optional (2^{20} encoder).

CUSTOM APPLICATIONS

BEI's technical personnel stand ready to assist in applying encoders in custom configurations.

Unusual linear or non-linear codes, special supply voltages, RFI shielding, output interface buffers and parallel/serial converters.

Direct mounting on torque motor drives or low inertia capstan motors.

Space and military applications requiring high reliability criteria.

IOS 2000

DISTRIBUTED INTELLIGENCE I/O FOR MEASUREMENT/CONTROL

A uniquely flexible system serves clusters of remotely located sensors - makes distributed control practical for smaller applications. Serially linked to user programmable terminals, minis and μCs, IOS2000's factory preprogrammed MPU controls routine sensor signal conditioning (units conversion, linearization, excitation, auto zero and ranging, calibration, etc.) and monitoring functions.

IOS2000 offers dynamic configuration control: plug-in PCB modules let you add more I/O functions (contact closure, voltage, current), more memory, more power as needed. Internal self-diagnostic reporting programs cut downtime. Packaging-in racks or NEMA enclosures - fits field or control room use.

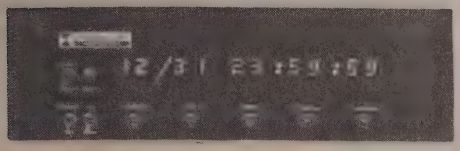
CHRONO-LOG CORPORATION

DIGITAL CLOCK/CALENDARS



SERIES 70,000 LED CLOCK/CALENDAR

CHRONO-LOG DIGITAL CLOCKS are used wherever a digital BCD output of real or elapsed time is required, such as in data logging, data transmission, data processing, telemetry and digital print-out systems. The outputs can also drive remote digital time displays.

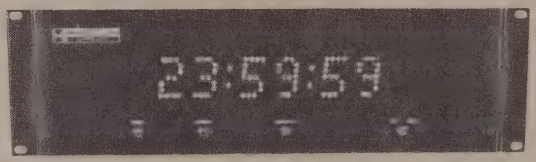
Buffered, gated parallel and/or digit serial (bit parallel) TTL compatible BCD outputs are provided. Options include a wide variety of time ranges; line frequency, external or internal crystal oscillator time bases; power sources, including standby batteries for operation during power failure; displays; and housing configurations. Provisions are available for interfacing to 8 bit or 16 bit input registers for minicomputers and microprocessors.

The Series 79,000 UP-DOWN Clock/Counter offers bi-directional features.

BIG TIME CLOCKS & REMOTE DISPLAYS

VISIBLE FROM 75 FEET

- 1½" LED dot shaped character
- 24 or 12 hour time
- 115/230 V., 50/60 Hz, or 12 V. DC
- standby battery option



REMOTE DISPLAYS accept parallel BCD inputs at TTL levels, display the data and provide retransmitting parallel BCD outputs to drive other displays.

TIME CODE INSTRUMENTS

CHRONO-LOG TIME CODE GENERATORS and READERS generate and read bit-serial modulated carrier time codes on analog tape recorders and transmission lines. DC level shift codes are also generated for oscillographic chart recorders.

The Series 9000 features low cost, low profile (1¾" panel height) units. Single IRIG code and multicode versions are offered as Generators, Readers or combination Generator/Readers. Semi-automatic synchronization to WWV is provided.

VIDEO GENERATORS

CHRONO-LOG VIDEO CHARACTER GENERATORS accept up to 16 BCD characters from Chrono-log instruments or other sources and generate a video signal for displaying the data on a video monitor or inserting the data into a video signal. Fixed alpha-numeric characters, stored in a PROM in the Character Generator, can be included as part of the display. Up to 31 characters can be displayed on one line, or 15 characters each on two lines.

DATA COUPLERS

CHRONO-LOG COMMUNICATIONS COUPLERS produce bit serial ASCII coded words at TTL levels, RS232C voltages or 20 ma current loops for interface to the communication ports of computers, teleprinters, video terminals, etc. The Communications Coupler is offered as an integral part of the Series 70,000 Digital Clock or as an independent instrument which can accept parallel BCD data at TTL levels.

ACCESSORY UNITS

STANDBY POWER PACKS are rechargeable battery units which provide +5 V. DC standby power for Chrono-log Digital Clocks and Time Code Generators. Three different capacities are offered: 2.5, 12.5 and 30 amp-hours.

OUTPUT BUFFERS accept a 21 bit TTL input word (normally hours, minutes, seconds and Power Failure bit) and produce up to ten (10) outputs to drive remote displays and data systems.

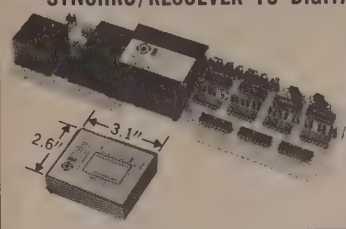
SYNCHRO CONVERTERS/DISPLAYS/ENCODERS

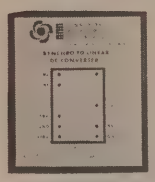
STANDARD LOW COST UNITS TO SATISFY ALMOST ANY SYNCHRO/RESOLVER OR SHAFT INTERFACING REQUIREMENT

SYNCHRO/RESOLVER TO DIGITAL Series SDC40/60



INPUT: 11.8/90 vrms L-L, 60 or 400 Hz. Ref: 26/115 vrms. **OUTPUT:** 16, 14, 12, or 10 Bits parallel binary or BCD. **ACCURACY:** ±2, ±4, ±6 or ±30 minutes of arc. **PACKAGE:** A) 2.6" x 3.1" x .82"h Module B) 2.6" x 9.25" x .9"h or 4½" x 6½" x .75"h repairable PC card.

SYNCHRO/RESOLVER TO LINEAR DC Series SLD200

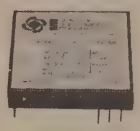


INPUT: 11.8/90vrms L-L, 60 or 400 Hz., Ref: 26/115vrms. **OUTPUT:** (A) −10 to +10 vdc linear with angles from −180° to +180° (standard) (B) 0 to +10V DC linear with angle from 0° to 360° (special) (C) −10 to +10 vdc linear with angles from −90° to +90°. **ACCURACY:** ±6 minutes of arc at input speeds up to 1440°/sec, or ±15, ±30, ±60 minutes of arc. **PACKAGE:** (A) 2.6" x 3.1" x .82" Module; (B) 3.06" x 2.6" x 3.18"H Can; (C) 4.5" x 6.5" x .75"H repairable PC card.

SYNCHRO/RESOLVER TO SINE-COSINE DC Series SD100

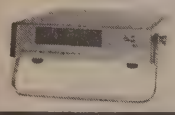
INPUT: 11.8/90 vrms L-L, 60 or 400 Hz. Ref: 26/115 vrms. **OUTPUT:** ±10 sin θ vdc; ±10 cos θ vdc. **ACCURACY:** ±2 or ±4 minutes of arc. **PACKAGE:** 1.75" x 1.75" x .6"h or 3" x 3" x .625"h Module.

INVARIANT SYNCHRO/RESOLVER TO SINE-COSINE Series SD100 I



INPUT: 11.8/90 vrms L-L, 60 or 400 Hz. Ref: 26/115 vrms. **OUTPUT:** ±10 sin θ vdc, ±10 cos θ vdc. **ACCURACY:** ±4 minutes of arc. **INVARIANCY:** A ±10% change in the input or reference voltage results in a ±.5% change in the individual DC outputs. **PACKAGE:** 3" x 3" x .625"h Module.

SYNCHRO ANGLE INDICATOR Series AI400

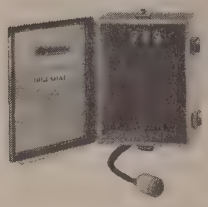


INPUT: 11.8/90 vrms L-L, 60 or 400 Hz. Ref: 26/115 vrms. **OUTPUT:** 5 Digit display and BCD data. **ACCURACY:** ±.03°, ±.05°, or ±.1°. **PACKAGE:** 9.5"w x 1.75"h x 12" Deep — Bench or Rack Mounting.

BINARY ANGLE INDICATOR (BINARY TO BCD) Series BAC100

INPUT: Up to 16 bits of parallel binary data, TTL compatable. **OUTPUT:** 5 digit display of angle (0° to 359.99°) OR ANY OTHER SCALE FACTOR DESIRED FROM 0 TO 99999 REPRESENTING ENCODER POSITION, RANGE, PRESSURE, WEIGHT, ETC. **ACCURACY:** ±.01° (±1 lsb). **PACKAGE:** A) 7.0"w x 1.75"h x 8.25" deep — Bench or Rack Mounting B) 4.5" x 6.5" x 1.8"h PC Board requiring +5 vdc at 1 amp C) 2.6" x 3.1" x .82h Module.

PROGRAMMABLE LIMIT SWITCHES Series DLS



INPUT: Shaft angle position.
LIMITS: (A) Dwell (From-to): 8 per unit
(B) Set Point — 16 per unit
(C) Closure — 16 per unit
OUTPUTS: (A) Logic Levels
(B) Power Transistor
(C) Relay
(D) Display (LED)
ACCURACY: Up to ±.1°
PICKOFF: Resolver (size 15 or 11)
PACKAGE: (A) 19" x 12" x 8.75"h
(B) NEMA 12 — 16" x 12" x 8"

DIGITAL TO SYNCHRO/RESOLVER Series DSC40/60

INPUT: 14, 12 or 10 bits parallel binary and 26/115 vrms reference. **OUTPUT:** 11.8/90 vrms. L-L, 60 or 400 Hz capable of driving 1VA, 2VA or 5VA LOADS: (up to 3 T.R.'s). **ACCURACY:** ±4, ±15 or ±30 minutes. **PACKAGE:** A) 2.6" x 3.1" x .82"h Module B) 4½" x 9¼" PC Card with edge connector (5VA units).

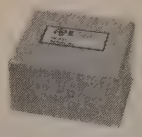
DC ANGLE TO SYNCHRO/RESOLVER Series LDS500

INPUT: ±10 vdc or ±100 vdc representing ±180° of angle. **OUTPUT:** 11.8/90 vrms L-L, 60 or 400 Hz capable of driving up to three size 11 T.R.'s (75 ohms L-L). **ACCURACY:** ±15 or ±30 minutes of arc. **PACKAGE:** (2) 4.5" x 9.25" x 2.0"h repairable PC Board with 22 pin edge connector.

DC SIN COS TO SYNCHRO DRIVERS Series DCS400

INPUT: ±10 vdc representing sin θ and cos θ. **OUTPUT:** 11.8/90 vrms L-L, 60 or 400 Hz capable of driving up to three size 11 T.R.'s (75 ohms L-L). **ACCURACY:** ±6, ±15, ±30 minutes of arc. **PACKAGE:** A) 4.5" x 6.5" x .8"h repairable PC Card. B) 4.5" x 9.25" x 1"h PC Card.

RECTANGULAR TO POLAR Series RP600



INPUT: R sin θ and R cos θ from 50 mv to 10 vdc. **OUTPUT:** R and θ. **ACCURACY:** θ: ±15 minutes at R = 10, R: ±.1% F.S. **PACKAGE:** 3.2" x 3.4" x 1.8"h Module.

ADDITIONAL PRODUCTS

- Hi Speed Multiplexed Syn to Digital
- Multiplexed Syn to Linear DC
- Digital Sin-Cos to Synchro
- Two Speed Digital to Synchro
- Selsyn to Digital/DC
- Azimuth Change Pulse Converters

ALL SYNCHRO INPUT/OUTPUT UNITS

- Available in 0°C to 70°C or −55°C to +85°C temperature range
- TTL compatable output and inputs or CMOS, or LP Shottky
- Operate from ±15 v, or ±15 and +5 vdc
- Transformer isolated inputs/outputs
- Solid State construction — 883 Level B Available
- CAN BE MADE FIELD OR FACTORY REPAIRABLE
- Available hermetically sealed and to MIL SPECS (E-5400)
- Delivery: Stock to 4 weeks (small quantity)

SPECIAL UNITS AND PACKAGES AVAILABLE ON REQUEST

Write or phone for detailed specifications, applications assistance and evaluation units.

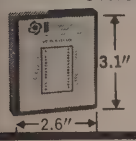
SYNCHRO CONVERTERS/DISPLAYS/ENCODERS

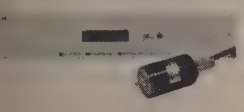
STANDARD LOW COST UNITS TO SATISFY ALMOST ANY SYNCHRO/RESOLVER OR SHAFT INTERFACING REQUIREMENT

SYNCHRO/RESOLVER TO BCD Series SBC



INPUT: 11.8/90vrms L-L, 60 or 400 Hz. Ref. 26/115vrms **OUTPUT:** 3 or 4 decade BCD — scaleable unipolar or bipolar. **ACCURACY:** ±30 or ±6 minutes of arc ±1 LSB. **PACKAGE:** 2.6" x 3.1" x .82" H Module. **OPTIONS:** Choice of Scale factors, Zero offset adjustments (±5%).

MULTITURN ABSOLUTE ENCODERS Series MDS90



INPUT: MULTI-TURN Shaft angle position. **OUTPUT:** 4, 5, or 6 Digit LED Display + BCD or Binary Data. **ACCURACY:** Up to ±1 pt. in 100,000. **PACKAGE:** Size 23 Pickoff with full or half rack electronics. **OPTIONS:** Zero Offset, NEMA 12 Housings, Presets, power supplies.

TYPICAL UNITS

Multiturn Encoders	Output Code	Resolution Counts/360°	Revolution for Full Count	Data Range
MDS90-DBC-16	Binary	2^{10}	64	2^{16}
MDS90-DBC-10	BCD	1000	10	10,000
MDS90-DBC-100	BCD	1000	100	100,000

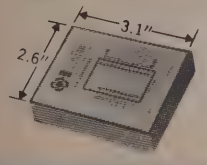
LOW COST ANGLE INDICATOR Series AI540

INPUT: 11.8/90vrms L-L, 60 or 400 Hz, Ref: 26/115vrms +115V 60 Hz power: **OUTPUT:** 4 digit or 3 digit, .5"H LED DISPLAY (unipolar or bipolar). **ACCURACY:** ±6 or ±30 minutes of arc ±1 LSB: **PACKAGE:** (A) 5.5"W x 7.5"L x 2.0"H PANEL MOUNT (DC supplies included): (B) 9½"W x 1¾"H, half rack mounting (DC supplies included. **OPTIONS:** Choice of scale factors, Zero offset adjustment (±5°).

MULTIPLEXED SYNCHRO TO DIGITAL Series MSH

INPUT: 11.8/90vrms L-L, 60 or 400 Hz., Ref: 26/115v rms, up to 128 channels; **OUTPUT:** 12 bit parallel binary or 4 decade BCD (unipolar or bipolar: **ACCURACY:** ±6 minutes of arc ±1 LSB: **PACKAGE:** (A) Central converter — 2.6" x 3.1" x .82"H module, (B) Input Module — 1.5" x 2.0" x .6"H, (C) Transformer Module — 1.5" x 1 3/16" x .6"H (Scott "T" — 400 Hz) +1" x 1" x .8"H (Ref.). **OPTIONS:** (A) choice of scale factor on BCD output, (B) Linear DC output, (C) Systems mounted on PC boards and/or racks.

MULTISPEED SYNCHRO TO DIGITAL Series TSD



INPUT: 11.8/90vrms L-L, 60 or 400 Hz., Ref: 26/115 vrms: **SPEEDS:** 8, 16, 32, 9, 18, and 36: **OUTPUTS:** 16 to 19 bits parallel binary: **ACCURACY:** ±.02, ±.01 or ±.005 degrees: **PACKAGE:** Two or Three 2.6" x 3.1" x .82"H modules. **OPTIONS:** (A) Systems packaged on PC Cards or in racks; (B) 5 digit display.

ABSOLUTE ENCODERS Series DS90

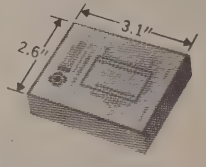
INPUT: Shaft angle position coupled to "DIGI-SHAFT" system: **OUTPUT:** four digit (.5"H) LED display (0 to 9999) +BCD or Parallel binary data (ANY SCALE FACTOR DESIRED): **ACCURACY:** ±1 part in 3600 (single turn) From shaft input to digital output: **PICKOFF:** Resolver (Size 8, 11, or 15): **PACKAGE:** (A) 5.44"W x 7.00" x 1.75"H: (B) Full or half rack: **OPTIONS:** Multichannels. Zero offset, Presets, DC output, Multiturn units with 5 digit (99999) output, NEMA 12 Housings.

TYPICAL UNITS (single Turn)

Pt. No.	Output	Counts/360°
DS90-DB-12	Binary Data	2^{12}
DSR90-36-BC	0-3599 display +BCD data	3600
DSR90-10	0-999 display	1000
DSR90L-25-BC	0 to ±2500 display +BCD data	±2500

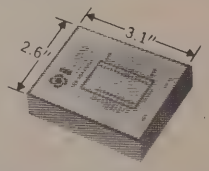
FULL SCALE OUTPUTS OF UP TO 9999 AVAILABLE
MULTITURN UNITS WITH UP TO 999999 FULL SCALE OUPUTS AVAILABLE

SOLID STATE CONTROL TRANSFORMER Series SCT



DIGITAL INPUT ANGLE (ϕ): 14, 12, or 10 bits parallel binary. **SYNCHRO/RESOLVER INPUT ANGLE (θ):** 11.8/90vrms L-L, 60 or 400 Hz. **OUTPUT:** E out=(V ref ±7%) sin (θ-ϕ) Sin wt: **GRADIENT:** .4 or 1vrms/degree. **RANGE:** ±7 or ±12.5 degrees: **ACCURACY:** ±4, ±15, or ±30 minutes of arc. **PACKAGE:** 2.6" x 3.1" x .82"H Module.

SOLID STATE CONTROL DIFFERENTIAL TRANSFORMER Series SCDX



DIGITAL INPUT ANGLE (ϕ): 14, 12, or 10 bits parallel binary. **SYNCHRO/RESOLVER INPUT ANGLE (θ):** 11.8/90vrms L-L, 60 or 400 Hz. **OUTPUT:** (1) 9.2K (ϕ) Sin (θ-ϕ) Sin wt. [7vrms.] (2) 9.2K (ϕ) Cos (θ-ϕ) Sin wt. [7vrms.] **ACCURACY:** ±4, ±15 or ±30 minutes of arc. **PACKAGE:** 2.6" x 3.1" x .82"H.

MODULATORS Series MOD500

INPUT: 0 to ±10 or ±100 VDC and 26V/115Vrms reference: **OUTPUT:** 0 to 7vrms (other voltages available. **ACCURACY:** ±.2% F.S.: **NULL:** ±.1% F.S. **PACKAGE:** 2.6" x 3.1" x .625" Module. **OPTIONS:** Gain+Zero Adjust, external output transformers.

DEMODULATORS Series D400

INPUT: 0 to 5, 10, 25 or 100vrms, 400 to 5000 Hz, 5/26vrms reference. **OUTPUT:** 0 to ±5 or ±10VDC. **ACCURACY:** ±.2, .3 or .5% F.S. **NULL:** ±.1% F.S. **PACKAGE:** (A) 1.75" x 1.75" x .6"H Module. (B) 2.75" x 1.4" x .75"H Module.

It's Faster With the Master

S/D MODULES (LOW PROFILE)

The series 168F are a family of low profile, high performance, "tracking type" synchro/resolver to digital converters that function over the frequency range of 0 to 1,200Hz without need for external transformer modules. Series 168F are available with all popular logic forms (TTL, LPTTL, LSTTL or CMOS).

Series 168F100

14 bit (.022°) resolution with ± 4 minute ± .9LSB accuracy and 3600°/sec tracking rate. Single module: 3.12" x 2.62" x .4".

Series 168F300

12 bits (.088°) resolution with ± 8.5 minute accuracy and 11,000°/sec tracking rate. Single module: 3.12" x 2.62" x .4".

Series 168F200

10 bits (.351°) resolution with ± 30 minute accuracy and 25,000°/sec tracking rate. Single module: 3.12" x 2.62" x .4".

TWO SPEED S/D MODULES

Complete two speed, high performance synchro (and resolver) to digital converters for measuring two speed synchro systems and providing a single, unambiguous, parallel, binary angle output.

Series 168C300

1:8, 1:16, 1:32, or 1:64 two speed synchro/resolver input. Log_2N + 14 bits resolution, where N = speed ratio. Two modules: 3.12" x 2.62" x .8".

Series 168C500

1:36 (or 2:36) two speed synchro/resolver input. 16 bit (0.0055°) resolution with 0.41 minute accuracy and 720° tracking rate. Two modules: 3.12" x 2.62" x .8".

S/BCD MODULES

The Series 168C are a family of miniature, high performance synchro (and resolver) "tracking" converters which function over a frequency range of 50 to 2,200Hz without external modules. These units output either a 3 or 4 decade BCD code which is ideal for directly driving displays.

Series168C650

Either 0 to 359.9° or 0 to ±179.9° outputs with an accuracy of ±6 minutes ±.9LSB. Tracking rate is 5400°/sec. Single module 3.12" x 2.62" x .8".

Series 168C750

0 to 359° outputs with an accuracy of ±30 minutes ±.5LSB. Tracking rate is 5400°/sec. Single module 3.12" x 2.62" x .8".

D/S MODULES

The series 192B are a family of DTL/TTL/CMOS compatible digital to synchro/resolver converters. Fourteen bit natural binary angle data is continuously converted back to analog form . . . either as 3-wire synchro or 4-wire resolver signals capable of driving most control transformers.

Series 192B500

14 bit (.022°) resolution and 4 minute accuracy capable of driving 100 ohms L-L @ 11.8Vrms and 5K ohms L-L @ 90Vrms. Single module for 400 Hz: 2.62" x 3.12" x .8"; additional external transformer module required for 60 Hz: 4.40" x 1.90" x 1.50".

MULTIPLEXED S/D CONVERTER Series 160A

The series 160A multiplexed synchro/resolver to digital converter is a complete system capable of digitizing up to 24 synchro/resolver inputs with multiple voltage and frequency inputs. Each system consists of three types of modules: Central Processor 3.12" x 2.62" x .8"; Input Module 2.1" x 1.62" x .4"; and a Reference Processor 2.1" x 1.62" x .4". 13 bit (0.044°) resolution with 3.9 minute ± .5LSB accuracy. Sample rate 1/cycle, all channels simultaneously. Conversion time of 100 μsec/channel. DTL & TTL compatible.

SYNCHRO/RESOLVER ANGLE INDICATOR Model 805B

The model 805B Synchro/Resolver Angle Indicator is a lightweight instrument intended for use in measuring single synchro or resolver signals and displaying the angle in degrees on a 5 digit LED readout.

TRUMP-ROSS OPTICAL SHAFT ENCODERS AND PROGRAMMABLE LIMIT SWITCHES

INCREMENTAL ENCODERS

	Pulses per Rev	Input Voltage (VDC)	Output Formats	Frequency Range (KHZ)	Shaft Dia. (Inches)	Outline Dimensions (Inches)	Features
Tru-Rota Instrumentation Encoder	10 to 1270 Single and dual channel 1271 to 2500 single channel only	5 to 15	TTL, HTL, CMOS, sine wave	0 to 50	1/4	2-5/16 DIA. x 1½ L	Compact, general purpose, instrument grade, incremental encoder. Low starting torque. Single or double-ended shaft. English/Metric combinations available.
Tru-Mite Industrial Encoder	200 to 5000	5 to 15	TTL, HTL CMOS, sine wave, line driver	0 to 100	3/8	2½ DIA. x2½ L	Rugged, industrial duty, incremental encoder with ⅜" diameter shaft and sealed bearings. Cast aluminum housing with flange or servo mount. Side or end-mounted MS connector. LED light source. English/Metric combinations available.
Tru-Tac Low-Cost Encoder	10 to 600	5 to 24	TTL, HTL, CMOS, line drivers	0 to 30	3/8	3L x 3⅛W x 3⅛H	Low cost, industrial duty, incremental encoder with double-ended ⅜" diameter shaft and sealed bearings. Foot or face mounting and MS connector. LED light source.
Trim-Step Modular Encoder	50 to 250	5	TTL, HTL, CMOS sine wave	0 to 25	N/A	2¼ DIA. x 1⅜ L	Rugged, modular, incremental encoder designed to be integrally mounted on a stepper or servo motor. Consists of a cylindrical slotted rotor and concentric stator. High shaft end play tolerance (.020"). Easy to install.
Kit-Coder Modular Encoder 	200 to 1000	5	TTL, sine wave	0 to 50	N/A	1½ DIA. x ¾ L	Low cost, modular, incremental encoder designed to be integrally mounted on a servo motor. Consists of an optically encoded disc on an aluminum hub and an LED light source/phototransistor/amplifier module. Small size and low inertia. Easy to install.
Heavy Duty Enclosure for Tru-Rotas used in severe environments such as machine tools conveyors, and mill drives.						For Tru-Rota and Tru-Mite encoders. Separate working shaft -⅜" or ⅝" diameter. NEMA 13 structure with sealed bearings and MS connector. Differential line driver can be incorporated.	

ABSOLUTE ENCODERS

	Resolution (Single Turn)	Input Voltage (VDC)	Output Codes	Output Formats	Frequency Range (KHZ)	Shaft Dia. (Inches)	Outline Dimensions (Inches)	Features
Model LR	9 Bit	5 to 24	BCD, gray, natural binary	TTL, HTL, CMOS	0 to 50	3/8 or 5/8	5L x 3½W 3⅝H	Industrial duty, absolute encoder. Heavy duty cast aluminum housing with ⅜" or ⅝" diameter shaft, and sealed bearings. Foot or face mounting and MS connector. LED light source. Non-ambiguous output.

PROGRAMMABLE LIMIT SWITCHES

	Number of "Cams"	Resolution (degrees)	Type of Output	Input Voltage	Shaft Dia (Inches)	Outline Dim. (Inches)	Features
Digi-Cam	1 to 12	1	TTL, HTL, CMOS	5 to 24 VDC	3/8 or 5/8	5L x 3½W x 3⅝H	Self-contained solid state, electronic cam switch. Internal semiconductor memory can be factory programmed for up to 12 individual cam on/off profiles with 1° minimum dwell for 360° of shaft rotation. Same rugged mechanical construction and I/O voltages as LR Absolute Encoder.
Electronic Cam System 	1 to 8 expandable to 24	1	Relay or Solid State	24, 115 or 230 VAC	Encoder 3/8 or 5/8 Programmer N/A	Encoder: 5L x 3½W x 3⅝H Programmer: 13W x 5½H x 6D	Replaces mechanical cam switches. Consists of LR Absolute Encoder and an electronic programmer. Never requires readjustment. Thumbwheels permit adjusting up to 8 on/off set points with 1° minimum dwell while shaft is rotating. Relay or solid-state outputs. Digital display indicates shaft position. Absolute encoder remembers shaft position even with power off.

datametrics

DATA SPECIALTIES manufacturers a complete line of paper tape peripherals to suit a wide variety of applications. All the products shown are built around the revolutionary MODUPERF™ mechanism which features whisper quiet operation, MYLAR punching capability, long life die block (1,000,000 feet) and field replaceable modules.

The SRP-300 is a paper tape combo that connects, without modification, to any 300 baud teleprinter or CRT terminal thru the RS-232 connector and provides all the features of a conventional ASR.

The units are offered at various speeds with parallel or serial interfaces in table top or rack mounted configurations. In addition, the basic mechanism and interface/driver are available. Consult the chart below for details.

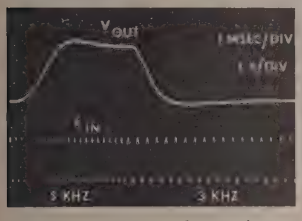
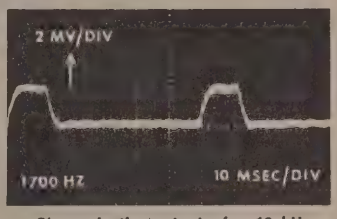
FREQUENCY-TO-ANALOG CONVERTERS
Fast and Ripple-Free

The New Model 22 Series F/A Converters (FAC) transform an input frequency to a proportional, ripple-free, output voltage with fast response. Because of their performance and utility, they will prove to be a basic building block for systems. They are superior to conventional charge-pump F/V converters, capable of being used directly with sampled analog data systems with no ripple uncertainties.



Output response of a 10 kHz FAC with a large step change of input frequency.

A New Basic Building Block for Data Conversion/Measurement Systems



Shown is the output of a 10 kHz FAC with a 20 period frequency change of +0.024% (of Full Scale), equivalent to 1 LSB change in 12 bits. Note the low ripple.

Not only can an analog data acquisition system (DAS) now measure frequency using these new FACs, but it can do it much faster than the digital counting methods. For some applications, several input frequencies can be multiplexed (or addressed) into a single precision 22B FAC for a low cost/channel system. The use of V/F converters for data transmission is now a very practical alternative. A 10 kHz V/F to FAC system can carry more data than a 1 MHz V/F to (12 bit) digital counter system, and also be easier to transmit.

Unlike gated counter methods, the output of the FAC continuously tracks the input frequency and provides the latest update when sampled by a DAS or other measuring system.

STANDARD MODULES — 1 kHz and 10 kHz Full Scale Input

INPUT
Dynamic Conversion Range — 10,000+/1
Configuration: Opto-isolated and direct level input.
— Any waveshape accepted which passes through the input trigger level.
Trip Level: Opto-isolated — +1 ma max., 40% hysteresis
Direct input — +2.0 volts, 0.8 volt hysteresis

OUTPUT
Output Voltage Range: 0 to +10 volts, +20% overrange.
Ripple: Less than ½ mv peak-peak at all input frequencies.

RESPONSE
For a 2/1 step change in frequency, the output will settle to within ±0.025% (of Full Scale) in less than 20 periods. Refer to scope photos for both large and small frequency step responses.

AVAILABLE OPTIONS
Other full scale frequencies are available from 100 kHz down to 100 Hz for Models 22A, B and down to 1 Hz for the 22AL.

INPUT OPTIONS
(-1) Uncommitted comparator input.
(-2) Input for magnetic reluctance pickup.

MODULES GENERAL SPECIFICATIONS: Operating Temperature Range — −25°C to +85°C.

Model Series[5]	Main Feature	Ripple Peak-Peak max	Linearity % of FS[1] max	Scale Tempco max	Power, max current	Scale Offset	Dimensions[1,4] (inches)	Price[1] (1-9)
22A	Single Supply	1 mv	±0.05%	±50 ppm/°C	+10 to +16 volts, 20 ma	±2 mv	2x1.5x.5	$59.00
22B	Precision	1 mv	±0.01%	±20 ppm/°C	±12, ±15 volts, 30 ma	±[2]1 mv	2x1.5x.5	74.00
22AL	Low Cost, 10/1 Range	1[3] mv	±0.1%	±50 ppm/°C	+10 to +30 volts, 10 ma	±2 mv	2x1.125x.5	39.00

NOTES: [1]For 10 kHz FAC [2]Trimmable to zero [3]Ripple increases below 1/10th full scale [4]Larger dimensions for low frequency units [5]F/A Converters are specified as in: 22B- (F S frequency) — (input options)

Complete Plug-in F/A Boards

D-B-Developments has an expanding line of Plug-in compatible FAC boards for most DAS and other data conversion systems. These plug-in cards use the precision 22B Series modules and can be specified for frequency range and input configuration. Power requirements are ±12 or ±15 volts. An optional +5 volt power converter is available for the larger DAS Boards. Consult factory for DAS compatible F/A converter cards.

DAS-22 Series Boards: Standard 4.5" x 6.5", 22 pin boards (¾" spacing).

DAS-22S — Single channel FAC with 3½" analog meter.

DAS-22D — Dual channel FAC.

DAS-22M — 8 input multiplexed FAC.

Full scale frequencies available: 100 kHz down to 10 Hz.

UNITED PRICING REPORTS

the single source that speeds up invoicing, pricing, quoting, purchasing and estimating

Electronic component prices change so fast, you'd need a team of people just to keep up.

United Pricing Reports is the better way. When you subscribe to Pricing Reports you receive 1500 pricing sheets (3000 pages) of the latest prices, as of the date we ship them to you.

This gives you, in a single source, up-to-the minute selling prices on more than 500,000 electronic components.

United Pricing Reports gives you accurate resale prices at the exact moment you need them. Not hours or days later. So it helps you eliminate frantic phone calls, letter writing and catalog scanning to check on prices when you write an invoice or type a purchase order.

Twice weekly price updates.

One week after you receive your Pricing Reports source book (1500 pricing sheets) you begin receiving twice weekly price updates. You simply take these new price pages and replace the now obsolete pages with them.

The whole process is simple. All information is organized alphabetically by manufacturer. And each manufacturer's price schedule is listed by part number in numerical/alphabetical sequence.

One more thing. When we promise twice weekly updates, we deliver. 52 weeks a year, consistently. Not monthly or every other month. We have a tradition of delivery on our promises, and we're certainly not going to stop now.

ADC-Econoverter: Lowest cost, 6 bit counting type A/D converter with 50 μsec. conversion time.

ADC-89A: Low cost, 8 bit binary or BCD A/D converter using counting method.

ADC-MA SERIES: Industry standard 10 and 12 bit successive approximation A/D converters with 40 or 20 μsec. conversion times. The ADC-MA12B2A is pin/performance replacement for the ADC-12QZ.

ADC-149-14B: A low cost, high resolution successive approximation A/D featuring 14 bit resolution and 50 μsec. conversion time.

ADC-M SERIES: These models are also fast, high performance successive approximation converters with less than 13 μsec. conversion time. Tempco is 10 ppm/°C and input voltage ranges must be ordered by model number.

ADC-L SERIES: Popular, high performance series of 8, 10, and 12 bit binary and 2 and 3 digit BCD models. Conversion times less than 20 μsec. with 10 ppm/°C tempco.

ADC-E SERIES: Series of fast dual slope A/D converters featuring 8, 10, and 12 bit binary and 2 or 3 digit BCD resolutions. Conversion times down to 312 μsec. for 8 bits.

Linearity	Input Impedance	Gain Tempco	Power Requirement	Case Size (inches)	Price (1-9)
1/2 LSB	4.2K	100 ppm/°C	±15V, +5V	2 x 2 x 0.375	$39.00

ADC-EH8B SERIES: Fast, 8 bit successive approximation A/D converters featuring 4 or 2 μsec. conversion times.

ADC-EH10B SERIES: Fast 10 bit successive approximation A/D converters featuring 4 or 2 μsec. conversion times.

ADC-EH12B SERIES: Fast 12 bit successive approximation models give 8 and 4 μsec. conversion times.

ADC-EH12B3: Industry's fastest 12 bit A/D converter with a 2 μsec. conversion time.

ADC-G SERIES: These high speed 8 and 10 bit A/D's feature 100nsec. per bit conversions, giving 800 nsec. for 8 bits and 1 μsec. for 10 bits.

ADC-SH4B: This model is a 4 bit A/D converter with a self-contained sample-hold circuit. Time for both acquisition and conversion is 500 nsec. This device is designed for optical scanning and fast pulse code modulation applications.

ADC-TV8B: New 8 bit, 20 MHz A/D converter containing internal sample-hold. Specially designed for video and radar digitizing.

ADC-UH SERIES: Ultra-fast parallel type converters with 40 nsec. conversion time for 4 bits and 100 nsec. for 6 or 8 bits.

ADC-VH SERIES: Ultra-fast parallel type converters with 100 nsec. conversion time for 4 bits and 200 nsec. for 6 or 8 bits.

Linearity	Input Impedance	Gain Tempco	Power Requirement	Case Size (Inches)	Price (1-9)

	DAC-HZ12DMR-1	3 Digits	0.05%				CBCD

NOTES: 1. All models in this series are also available with 3 digit BCD coding. Prices are same as binary. For correct model designation, change "B" to "D" in model number.

2. Coding: Bin = Straight binary or offset binary
BCD = Binary coded decimal
C Bin = Complementary binary
C BCD = Complementary binary coded decimal
15 line = 8 bit input, no coding

DAC-IC8B: Low cost, monolithic 8 bit D/A converter with 300 nsec. current output.

DAC-08: Low cost, high speed monolithic 8 bit DAC featuring 85 nsec. settling time for output current.

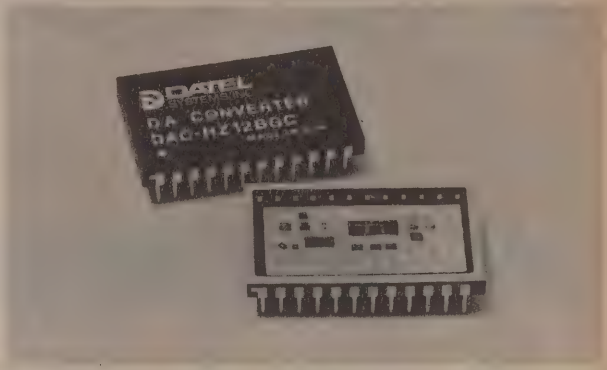
DAC-IC10B: A low cost monolithic 10 bit D/A converter with 0 to 4 mA current output.

DAC-HA10B: A multiplying 10 bit DAC using CMOS and thin film resistor fabrication.

DAC-HA12 SERIES: 12 bit binary and 3 digit BCD multiplying DAC's with CMOS and thin film resistor fabrication.

DAC-HZ12 SERIES: Industry standard, high performance 12 bit hybrid DAC's featuring fast voltage output and 20 ppm/°C tempco. Binary and BCD coding.

DAC-HZ12BMR-1 & DAC-HZ12DMR-1: Low drift, 10 ppm/°C 12 bit D/A converters with binary and BCD versions.



Output Ranges	Gain Tempco	Temp. Range (°C)	Power Requirement	Case	Price (1-24)

DAC-9 SERIES: This series includes DAC-9, DAC-19, DAC-29, DAC-49, and DAC-69 models, featuring low cost 8, 10, and 12 bit performance. Both current and voltage output types are offered along with both binary and BCD coding. Output settling times vary from 300 to 500 nsec. for current outputs and from 5 μsec. to 20 μsec. for voltage outputs.

DAC-I SERIES: This series features low drift (15 ppm/°C) current outputs with 150 nsec. settling time. Resolution is 8, 10, and 12 bits with binary and BCD coding.

DAC-169: Low cost, high resolution DAC's featuring 0.005% linearity and 10 ppm/°C tempco for 16 bit binary and 4 digit BCD models.

DAC-DG12B: 12 bit, ultra-fast voltage output DAC with deglitching circuitry. For use with CRT displays with up to 2.5 MHz update rate.

DAC-HI SERIES: 8, 10, and 12 bit resolution, current output DAC's featuring ultra-fast 25 & 50 nsec. output settling times.

DAC-HR SERIES: Ultra low drift (1.5 ppm/°C) D/A converters with resolutions from 13 to 16 bits.

DAC-V SERIES: These models are fast settling (2 μsec.) voltage output devices with 8, 10, and 12 bit resolutions.

DAC-VR SERIES: These 8, 10, and 12 bit models have a fast (2 μsec.) voltage output with a 20ppm/°C tempco. They feature a digital input storage register for maximum flexibility in transferring input data.

This broad line of analog multiplexers offers 4 through 16-channel performance. The MX series multiplexers are monolothic devices which use dielectrically isolated CMOS fabrication. The analog and digital inputs are protected from loss of power and from overvoltages that exceed power supply voltages. They feature fast settling time, low capacitance, and low leakage currents. The MV series are lower cost monolithic CMOS devices which have lower channel ON resistance but do not have full input protection.

SHM-IC-1: Monolithic sample-hold featuring 5 μsec. acquisition time to 0.01%.

SHM-LM-2: Low cost monolithic unit with 6 μsec. acquisition time to 0.01%.

SHM-HU SERIES: Ultra-fast hybrid type sample-hold with 25 nsec. acquisition time over ± 2.5V range.

SHM-6 SERIES: High performance hybrid sample-hold featuring 1 μsec. acquisition time to 0.01%.

SHM-1: Modular, general purpose device with high accuracy and 5 μsec. acquisition time.

SHM-2, SHM-2E: Very high speed open loop circuit achieves acquisition times as fast as 100 nsec.

SHM-5: Ultra-fast modular sample-hold with 350 nsec. acquisition time to 0.01%.

SHM-UH, SHM-UH3: Ultra-fast modular sample-hold with 50 and 30 nsec. acquisition times for 8 bit applications.

This broad line of monolithic and hybrid operational amplifiers is designed for data acquisition and conversion applications where high speed and small size are required. The devices shown in this table are wide bandwidth, high slew rate, fast settling amplifiers. In addition to high speed, they also have excellent DC characteristics making them good choices for high accuracy applications.

Four basic models of bipolar input amplifiers are offered along with two FET input models. The AM-464-2 is a new high voltage, fast settling amplifier with ±35V output swing. The AM-500 is a new hybrid, ultra-fast amplifier for inverting-only applications. It features 1000V/μsec. slew rate, 100 MHz gain bandwidth product, and 200 nsec settling time to .01% for a 10V step input. The AM-490-2 series are monolithic, chopper stabilized operational amplifiers with open loop gain of 5 x 10^8 and input offset drifts of 1.0, 0.3, and 0.1 μV/°C maximum.

Instrumentation Amplifiers

These instrumentation amplifiers are designed for high performance data acquisition system front ends. They provide resistor-programmable gains with high input impedance and low drift. Gain can be programmed from 1 to 1000, and input offset drift is as low as 0.25 μV/°C at a gain of 1,000. The AM-201 series gives the highest performance for critical applications, including a bandwidth of 45 kHz at a gain of 1,000. For less critical applications, the low cost monolithic AM-435 provides excellent characteristics including FET inputs with very low bias currents.

This comprehensive line of modern data acquisition systems gives the user a choice of units from a new low cost hybrid system up to a larger 250 kHz, 16 channel system. All models are complete, including automatic digital sequencing circuitry.

HDAS-16, HDAS-8: These devices are new miniature state-of-the-art hybrid systems featuring a programmable instrumentation amplifier, 16 channel single-ended or 8 channel differential operation, and 12 bits resolution at a 50 kHz rate.

MDAS-16, MDAS-8D: These popular miniature data acquisition systems are low cost and feature 5 programmed input ranges, 16 single-ended or 8 differential channels, 12 bit resolution, and a 50 kHz throughput rate. Size is only 4.6×2.5×0.375 inches.

MDAS-250A, MDAS-250B: These models offer 16 channel single-ended operation at 250 kHz throughput. Resolution is 12 bits and input options are 0 to −10V (MDAS-250A) or ±5V (MDAS-250B). Package size is 5.0×4.5×1.5 inches.

MDXP-32, MDXP-32-1: These modules are companion devices to the MDAS-16 and MDAS-8D. Both models contain 32 analog multiplexer channels, permitting expansion of the MDAS models up to 48 single ended or 24 differential channels using single level multiplexing. With double level multiplexing, up to 256 single ended or 128 differential channels can be realized using one MDXP-32 and seven MDXP-32-1's.

The MDXP-32-1 contains a 32 channel multiplexer and address decoder. The MDXP-32 contains, in addition, an address counter and address detector logic.

Prices (1-9): MDXP-32 $199.00
MDXP-32-1 $179.00

V/F Converters

This line of modular and monolithic V/F converters feature 10 kHz and 100 kHz models with excellent linearity and stability characteristics. The VFV series offers the highest performance with a universal design which can be used as a V/F or F/V converter by external pin connection. These devices have ±0.005% linearity for 10 kHz and ±0.05% linearity for 100 kHz; temperature stability is ±20 ppm/°C and ±100 ppm/°C maximum, respectively. For less critical applications the low cost, monolithic VFQ-1 is an excellent choice. It features a worst case linearity error of ±0.05% as a 10 kHz converter and can also be connected as an F/V converter. An external reference and several passive components are required with the VFQ-1.

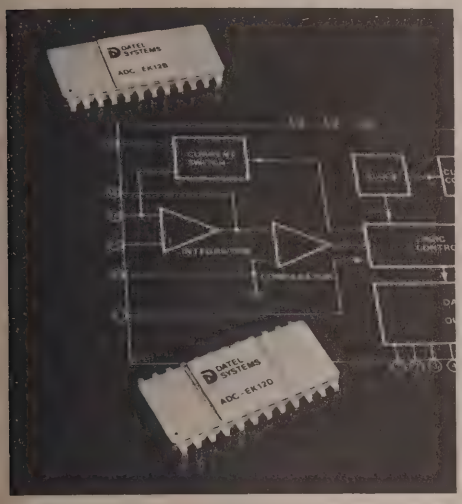
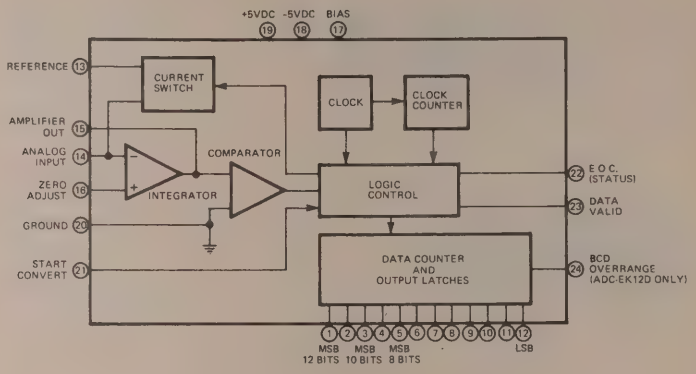
ADC-EK SERIES

MONOLITHIC INTEGRATING A/D CONVERTERS

DATEL SYSTEMS, INC.





FEATURES

- **Charge Balancing Type**
- **Binary or BCD Models**
- **20 mW Power Consumption**
- **No Missing codes**
- **8, 10, 12 Bit Resolution**

The ADC-EK series are low power, integrating A/D converters fabricated on a single monolithic chip using CMOS technology. The circuit employs a charge balancing integrator, current switch, comparator, clock counter, data counter, and control logic circuitry to implement conversion. The charge balancing integration technique gives high linearity and noise immunity along with inherent monotonicity resulting in no missing codes. Output data appears in parallel form on latched outputs which are CMOS, low power TTL, or low power Schottky TTL compatible. The ADC-EK series consists of 5 different models with 8, 10, and 12 bit binary coding and 3½ digit BCD coding.

Conversion time is 1.8 to 24 milliseconds maximum depending on model. Nonlinearity is ±½ LSB max. while differential nonlinearity is ±¼ LSB typical.

SPECIFICATIONS, Typical at 25°C

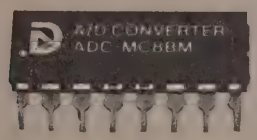
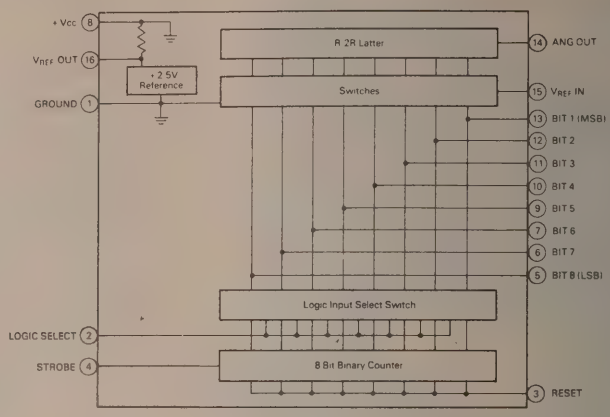
ADC-MC8B

LOW COST, 8 BIT MONOLITHIC A/D CONVERTER





FEATURES

- **8 Bit Resolution**
- **Internal 2.5 V Reference**
- **+5 V Supply Operation**
- **Operates as A/D or D/A**
- **Low Cost**

The ADC-MC8B is an 8 bit monolithic, multifunction converter which operates from a single +5 V supply. This device can be operated as either an A/D or D/A converter by means of external pin connections. As a D/A converter it is complete, including an internal 2.5 V reference; the output voltage is 0 to +2.55 V when using the internal reference. When operating as an A/D converter, two external IC's are required: a 311 type comparator, and a 74132 type quad NAND gate. An internal counter develops the output code word with 500 μsec. required for a full scale conversion.

The ADC-MC8B design consists of eight current switches, a diffused resistor R-2R ladder network, a 2.5 V band gap reference, an 8 bit binary counter, and eight logic select switches. The logic select switches have a control input which determines whether the switches provide TTL outputs or accept TTL inputs. This converter can also be used with an external reference.

SPECIFICATIONS, Typical at 25°C

	ADC-MC8B
Resolution	8 Bits
Conversion Time	500 μsec.
Gain Tempco	40 ppm/°C

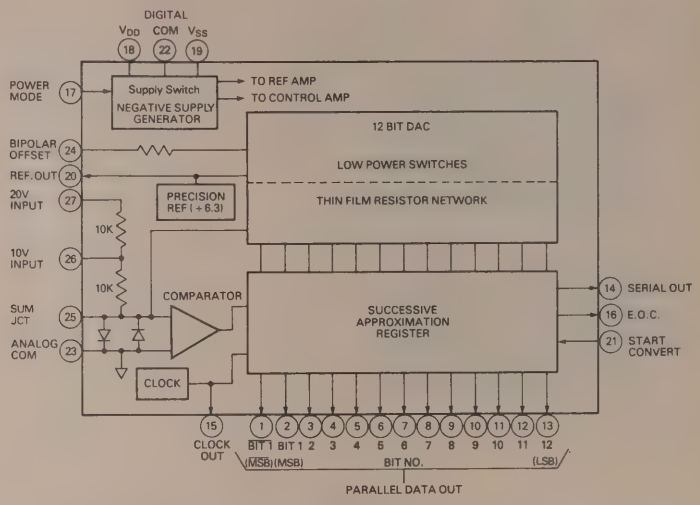
ADC-HC12B

12 BIT, LOW POWER A/D CONVERTER

DATEL SYSTEMS, INC.



FEATURES

- **Single Supply Operation**
- **CMOS Circuitry**
- **12 Bit Resolution**
- **6 Input Voltage Ranges**
- **26 mW Consumption at 1000 Conversions/Sec.**

The ADC-HC12B is a complete, low power 12 bit A/D converter utilizing CMOS circuitry. It is specifically designed for portable and remote instrumentation applications where low power consumption is essential; this unit operates from either a single +9 VDC to +15 VDC power source (interrupt mode) or from a dual ±9 VDC to ±15 VDC source (continuous mode). In the interrupt mode of operation the converter is initially in standby mode, drawing only 10 μA of current from the supply until a start convert pulse is applied to it. With the pulse applied the converter turns on, stabilizes, and then performs a 12 bit conversion and returns to the standby mode while the 12 bit data word is held at the output.

Power consumption is 112 milliwatts in the continuous mode and 26 milliwatts in the interrupt mode at 1,000 conversions per second. There are six different analog input voltage ranges.

SPECIFICATIONS, Typical at 25°C

	ADC-HC12B
Resolution	12 Bits
Conversion Time, continuous mode	305 μsec. max.
Conversion Time, interrupt mode	350 μsec. max.
Gain Tempco, max.	30 ppm/°C
Nonlinearity Error, max.	½ LSB
Differential Nonlinearity, max.	½ LSB
Differential Nonlinearity Tempco	2 ppm/°C of FSR
No Missing Codes	Over Op. Temp. Range
Power Supply Sensitivity	0.003%/%
Analog Input Ranges	0 to +5 V, +10 V, +20 V ±2.5 V, ±5 V, ±10 V
Input Impedance	5K, 10K, or 20K
Output Logic	CMOS
Unipolar Coding	Straight Binary
Bipolar Coding	Offset Binary Two's Complement
Power Requirement, continuous	±9 V to ±15 V
Power Requirement, interrupt	+9 V to +15 V
Package	32 Pin

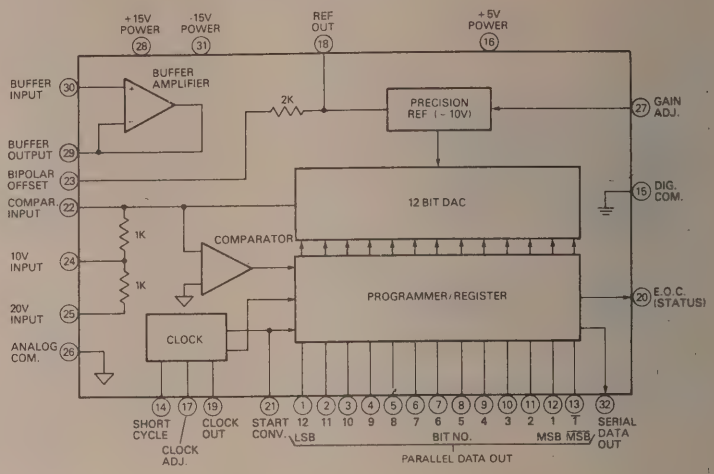
ADC-HF12B

12 BIT, ULTRA-FAST A/D CONVERTER



FEATURES

- **12 Bit Resolution**
- **2.0 μsec. Conversion Time**
- **5 Programmable Input Ranges**
- **100 Megohm Buffer Amplifier**
- **Short Cycling Capability**

The ADC-HF12B is an ultra-fast, 12 bit A/D converter manufactured with thin film hybrid technology. Using the successive approximation technique this converter completes a 12 bit conversion in just 2 microseconds. Five different input voltage ranges are available by simple external pin connection. An input buffer amplifier is also provided for applications where 100 megohm input impedance is required.

The ADC-HF12B circuit design uses an ultra-fast DAC with 12 matched current sources; it also contains a fast comparator, precision reference, clock, successive approximation register, and buffer amplifier. A thin film R-2R resistor ladder network is actively laser trimmed for optimum linearity.

Excellent tracking of the DAC current sources results in no missing codes over the operating temperature range.

SPECIFICATIONS, Typical at 25°C

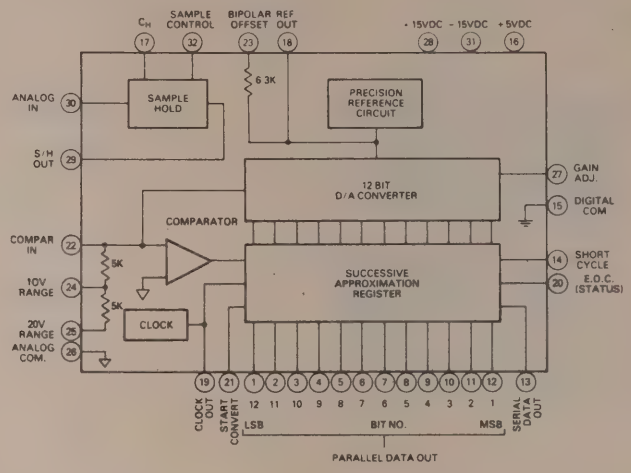
ADC-HS12B

12 BIT A/D CONVERTER WITH SAMPLE HOLD

DATEL SYSTEMS, INC.



FEATURES

- **Internal Sample-Hold**
- **6 μsec. Acquisition Time**
- **8 μsec. Conversion Time**
- **12-Bit Resolution**
- **Programmable Input Ranges**

The ADC-HS12B is a high performance 12 bit A/D converter combined with a sample-hold in a miniature 32 pin package. It is specifically designed for systems applications where the sample-hold is an integral part of the conversion process. The sample hold has a 6 μsec. acquisition time and the A/D converter has an 8 μsec. conversion time. Five input voltage ranges are programmable by external pin connection. The input impedance to the sample-hold is 100 megohms, permitting direct connection to an analog multiplexer.

This converter incorporates proven thin film hybrid technology used in high volume production. The thin film resistor network is fabricated of nichrome on glass and then actively laser trimmed for best linearity. Other features include 20 ppm/°C gain tempco, 2 ppm/°C differential nonlinearity tempco and no missing codes over the operating temperature range.

SPECIFICATIONS, Typical at 25°C

	ADC-HS12B
Resolution	12 Bits
Acquisition Time	6 μsec.

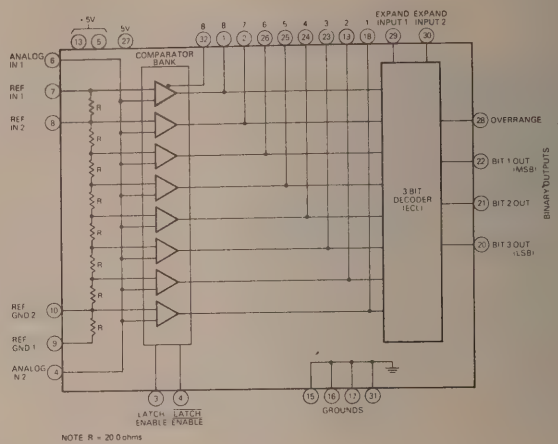
ADC-HU3B

3 BIT EXPANDABLE FLASH A/D CONVERTER



FEATURES

- **3 Bits Plus Overrange**
- **50 MHz Conversion Rate**
- **0.1% Linearity**
- **Expandable Building Block**
- **Parallel (Flash) Technique**

The ADC-HU3B is an ultra-fast, 3 bit A/D converter using the flash (or parallel) conversion technique. Using thin-film hybrid construction this device performs a conversion every 20 nanoseconds maximum, giving a 50 MHz conversion rate. It is a miniature building block circuit which can be used alone as a 3 bit A/D, with two units corrected together for a 4 bit A/D, or with four units connected together for a 5 bit A/D. There are two sets of digital outputs: one directly from the comparator outputs gives a "thermometer scale" output; the other is a 3 bit decoded binary output with an overrange bit.

The ADC-HU3B is fabricated using a bank of 8 ultra-fast monolithic analog comparators. A 160 ohm tapped thin-film resistor network biases the comparators and is connected to an external voltage reference: the network is actively laser trimmed to give 0.1% linearity.

SPECIFICATIONS, Typical at 25°C

	ADC-HU3B
Resolution	3 Bits
Conversion Time, 8 line output	16 nsec. max.

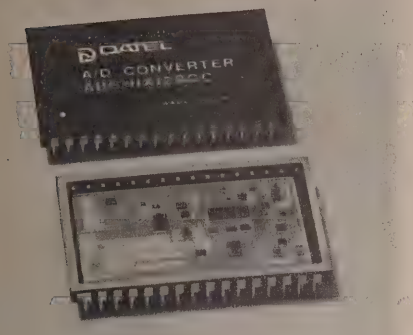
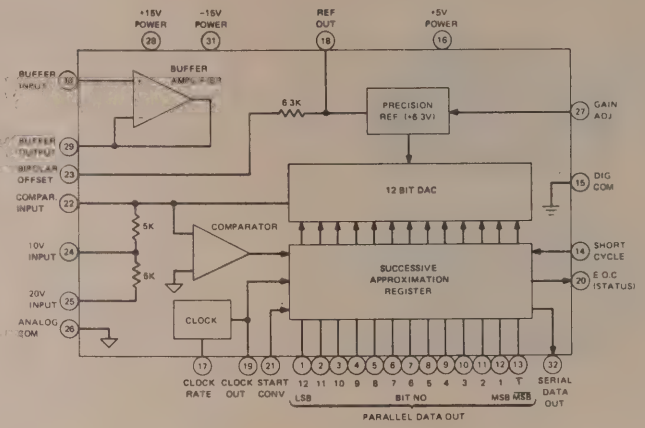
ADC-HX12B

12 BIT, LOW COST A/D CONVERTER

DATEL SYSTEMS, INC.





FEATURES

- **12 Bit Resolution**
- **20 μsec. Conversion Time**
- **5 Programmable Ranges**
- **100 Megohm Buffer**
- **Lowest Cost**

The ADC-HX12B is a very low cost, 12 bit A/D converter which is functionally complete. It is fabricated with thin film hybrid technology to perform a conversion in 20 μsec. By means of external pin connections it can be programmed for 5 different input voltage ranges. An internal 100 megohm buffer is provided for high input impedance applications.

The circuit consists of a 12 bit DAC which employs quad current switches, a precision zener reference, a fast comparator, clock, successive approximation register, and buffer amplifier. A nichrome thin film resistor network is actively laser trimmed to achieve optimum linearity.

Output data is available in both parallel and serial forms. This converter can also be short cycled to achieve faster conversions at lower resolutions.

SPECIFICATIONS, Typical at 25°C

	ADC-HX12B
Resolution	12 Bits
Conversion Time, max.	20 μsec.
Gain Tempco, max.	20 ppm/°C

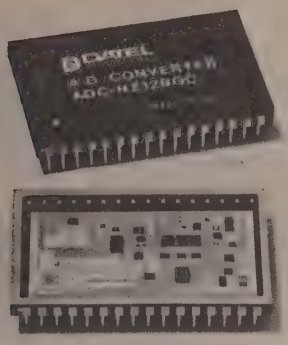
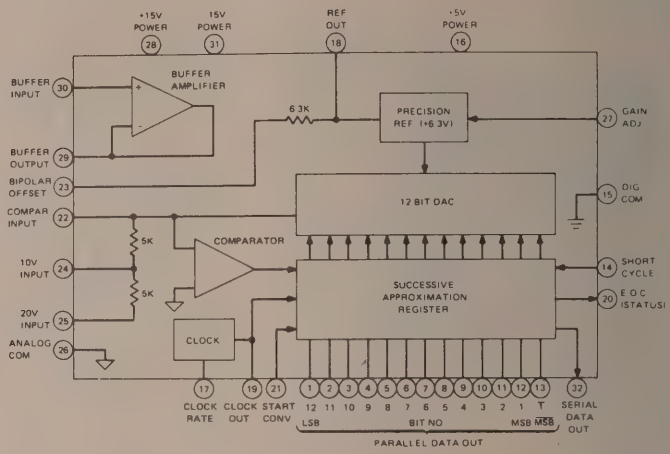
ADC-HZ12B

12 BIT, HIGH PERFORMANCE A/D CONVERTER





FEATURES

- **8 μsec. Conversion Time**
- **20 ppm/°C Tempco**
- **5 Programmable Ranges**
- **Short Cycle Capability**
- **100 Megohm Buffer**

The ADC-HZ12B features high conversion speed in a hybrid 12 bit A/D converter. By employing a low capacitance nichrome-on-glass thin film resistor network, a conversion time of only 8 μsec. is achieved. This converter also has 5 different input voltage ranges determined by external pin connection and a 100 megohm buffer which may be connected if desired.

This ADC-HZ12B is functionally complete, incorporating a 12 bit DAC, precision reference, fast comparator, successive approximation register, a clock, and buffer amplifier. The thin film resistor network has excellent tracking characteristics resulting in no missing codes over the operating temperature range. The network is functionally laser trimmed.

Output coding is complementary binary, complementary offset binary, or complementary two's complement. Provision is made for precise, external adjustment of offset and gain.

SPECIFICATIONS, Typical at 25°C

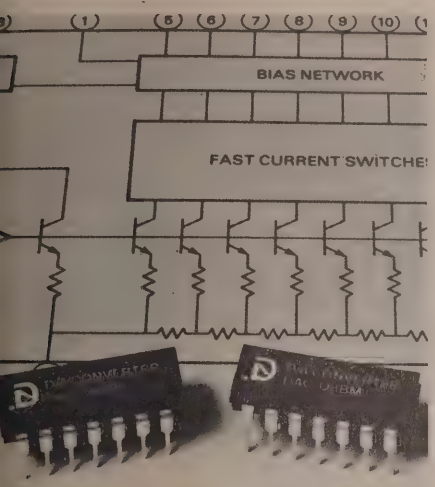
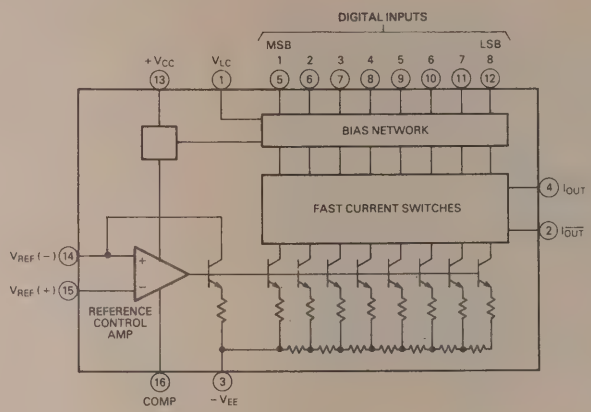
DAC-08B

HIGH SPEED, MONOLITHIC 8 BIT D/A CONVERTER

DATEL SYSTEMS, INC.





FEATURES

- 8 Bit Resolution
- 85 nsec. Settling Time
- High Output Compliance
- 1 or 2 Quadrant Multiplying
- Low Cost

The DAC-08BC and DAC-08BM provide very high speed performance coupled with low cost and application flexibility. These units have guaranteed full 8-bit monotonicity with non-linearity of 0.19% over the full operating temperature range. High speed current steering switches achieve 85 nanosecond settling time with a very low glitch for full scale changes. A large output voltage compliance range (−10 to +18 Volts) allows direct current to voltage conversion with just an output resistor, omitting the need for an op amp in many cases.

The DAC-08 consists of 8 fast-switching current sources, a diffused R-2R resistor ladder, a bias circuit, and a reference control amplifier. The diffused resistor ladder gives excellent temperature tracking resulting in a gain temperature coefficient of 10 ppm/°C. The monolithic fabrication results in excellent linearity and tempco, fast output settling and low cost.

SPECIFICATIONS, Typical at 25°C

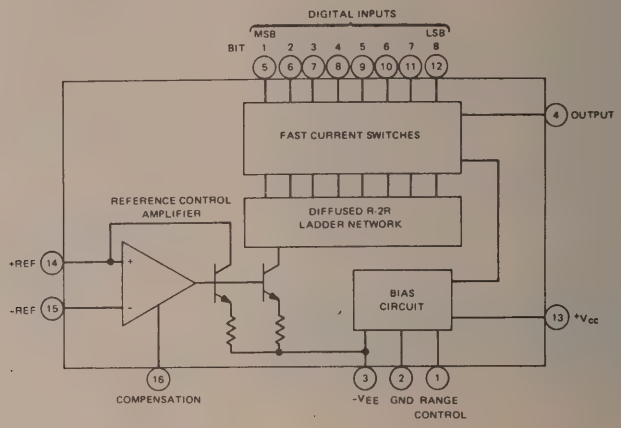
DAC-IC8B

LOW COST, MONOLITHIC 8 BIT D/A CONVERTER



FEATURES

- **8 Bit Resolution**
- **300 nsec. Settling Time**
- **½ LSB Linearity**
- **DTL/TTL Inputs**
- **Low Cost**

The DAC- IC8B is an 8 bit monolithic D/A converter designed for low cost and flexible application. It is packaged in a 16 pin DIP and requires only an external output amplifier and reference for operation. A full scale output change settles in 300 nanoseconds for a current output; this can be converted into a fast voltage output with a monolithic operational amplifier such as Datel System's AM-452. Digital input coding is straight binary for unipolar operation and offset binary for bipolar operation and is compatible with standard DTL/TTL logic.

The DAC-IC8B circuit consists of 8 fast switching current sources, a diffused resistor R-2R ladder network, a bias circuit, and a reference control amplifier. The diffused ladder network results in excellent linearity and temperature tracking. An external reference current of 2 mA must be supplied from the reference voltage source and the reference can be varied for one or two quadrant multiplying operations. Two models are available for the commercial and military temperature ranges.

SPECIFICATIONS, Typical at 25°C

	DAC-IC8B
Resolution	8 Bits
Settling Time, to ½ LSB	300 nsec.
Gain Tempco	20 ppm/°C
Nonlinearity, max.	½ LSB
Diff. Nonlinearity	½ LSB
Power Supply Sensitivity	0.01%/%
Analog Output Ranges	0 to 2.1 mA 0 to 4.2 mA
Output Voltage Compliance	−0.6 V to +0.5 V
Input Logic	DTL/TTL
Coding, unipolar	Straight Binary
Coding, bipolar	Offset Binary
Power Requirement	+5 VDC at 22 mA −4.5 to −16.5 V at 13 mA
Package	16 Pin DIP

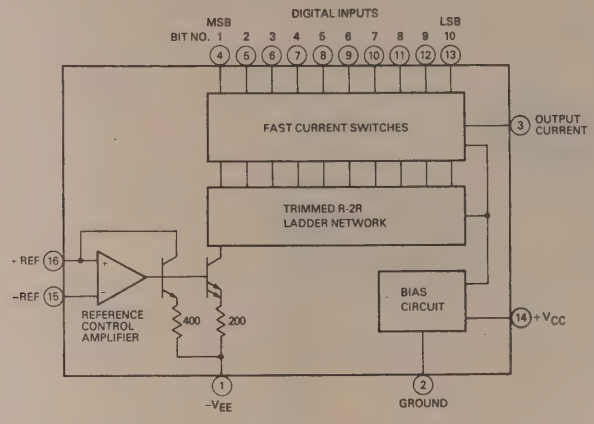
DAC-IC10BC

LOW COST, MONOLITHIC 10 BIT D/A CONVERTER

DATEL SYSTEMS, INC.



FEATURES

- **10 Bit Resolution**
- **Straight Binary Coding**
- **Current Output**
- **250 nsec. Settling Time**
- **TTL/CMOS Compatible**

The DAC-IC10BC is a low cost, 10 bit monolithic DAC with fast output current settling time. It is packaged in a 16 pin ceramic DIP and requires only an external reference and operational amplifier for voltage output operation. A full scale change in output current settles in 250 nanoseconds, and with a fast I.C. op amp (such as Datel System's AM-452) a 10V output change can settle within 1 microsecond. Digital input coding is straight binary for unipolar operation, and offset binary for bipolar operation; the logic inputs are compatible with TTL or CMOS.

This converter is manufactured with monolithic bipolar technology. The circuit incorporates 10 fast switching current sources which drive a diffused resistor R-2R network. The ladder network is laser trimmed by cutting aluminum links. The circuit also contains a reference control amplifier and a bias circuit. An external reference current of 2 mA is required at the + Reference input terminal.

The DAC-IC10BC has ±1 bit linearity with guaranteed monotonicity at room temperature and has a tempco of 20 ppm/°C.

SPECIFICATIONS, Typical at 25°C

	DAC-IC10BC
Resolution	10 Bits
Settling Time, to ½ LSB	250 nsec.

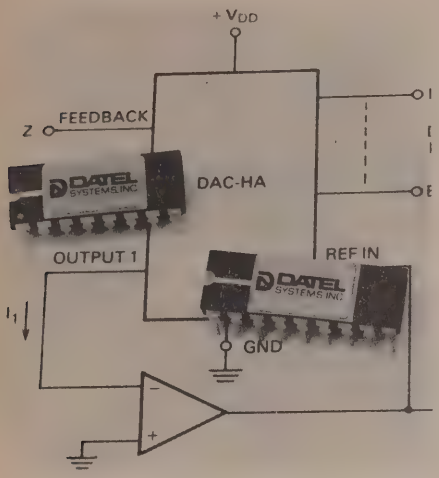
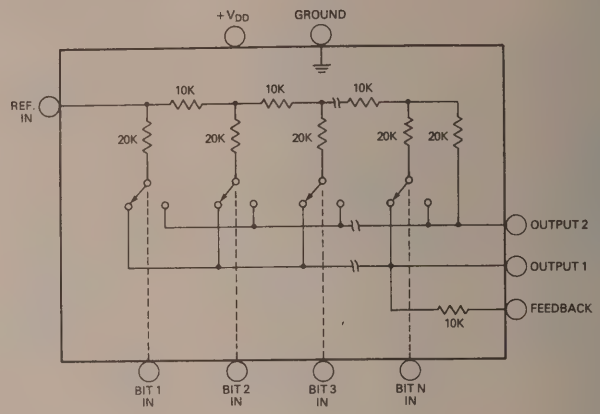
DAC-HA10B, DAC-HA12B

LOW POWER CMOS 10 & 12 BIT MULTIPLYING D/A CONVERTERS





FEATURES

- **10 & 12 Bit Resolution**
- **½ LSB Maximum Nonlinearity**
- **2 & 4 Quadrant Multiplying**
- **Low Power CMOS**
- **+5 V or +15 V Power Supply**

The DAC-HA series are high performance, multiplying digital to analog converters. They combine CMOS switches with laser trimmed nichrome thin film resistors to realize low power consumption with excellent linearity and drift characteristics. There are three models in this series: DAC-HA10B for 10 bit binary applications, DAC-HA12B for 12 bit binary applications and DAC-HA12D for 3 digit BCD applications. All units feature ±½ LSB maximum nonlinearity.

The thin film R-2R ladder network consists of 10K and 20K resistors with excellent tracking characteristics. The network provides a 10K input resistance to the required external reference, which can vary over ±10 V. The bandwidth for the reference input is 200 kHz. These devices are ideal for two and four quadrant multiplying applications and have output settling times of 500 nsec. Separate models are available for both +5 V and +15 V supply operation.

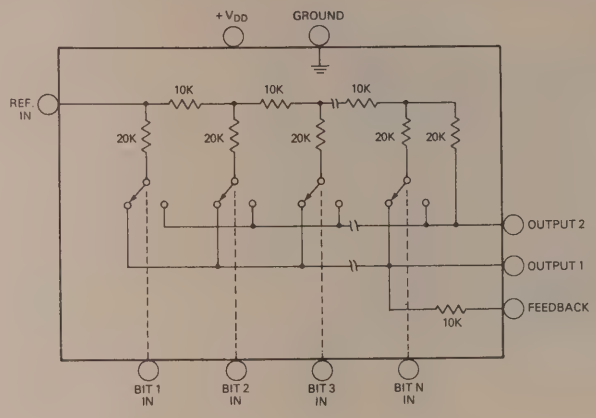
DAC-HA14B

HIGH RESOLUTION, MULTIPLYING CMOS D/A CONVERTER

DATEL SYSTEMS, INC.



FEATURES

- **14 Bit Resolution**
- **2 & 4 Quadrant Multiplying**
- **500 nsec. Settling Time**
- **10 ppm/°C Tempco**
- **+5 V or +15 V Power Supply**

The DAC-HA14B is a 14 bit, CMOS multiplying D/A converter. There are two versions, offering a choice of either +5 V or +15 V power supply operation. The +5 V model draws only 10 μA quiescent current while the +15 V model draws 2 mA. The device is packaged in a 20 pin ceramic DIP package.

The combination of low ON resistance CMOS switches and a laser-trimmed nichrome thin film resistor network result in a maximum nonlinearity of ±1 LSB with 14 bit monotonicity at 25°C. The gain temperature coefficient of the circuit is 10 ppm/°C maximum. The resistor network is an R-2R ladder with resistance values of 10K and 20K ohms.

The input resistance to the ladder is 10K ohms for the external reference source, which may be ±10 V. Bandwidth for the reference input is 200 kHz. The DAC-HA14B incorporates internal protection on the power supply and digital input terminals to prevent latch-up problems.

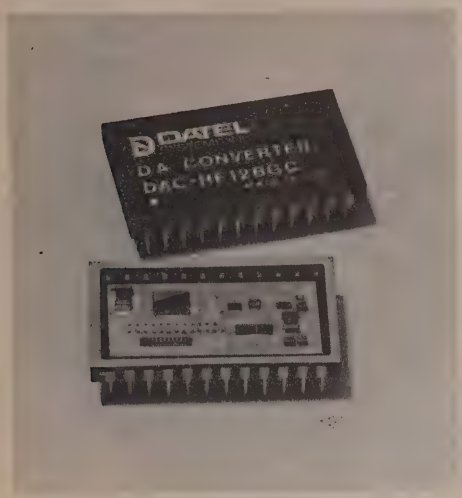
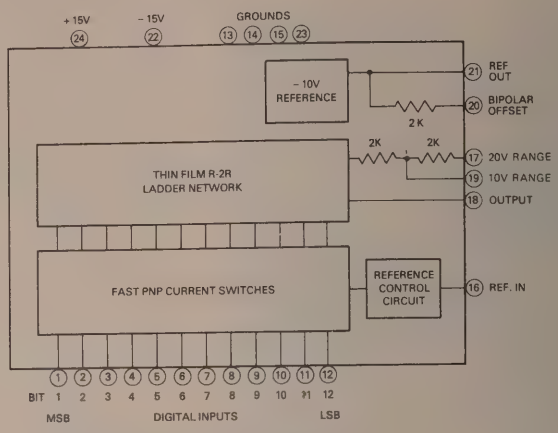
DAC-HF SERIES

ULTRA-FAST, CURRENT OUTPUT D/A CONVERTERS





NOTE: FOR DAC-HF10B PINS 11 & 12 ARE NO CONNECTION
FOR DAC-HF8B PINS 9, 10, 11 & 12 ARE NO CONNECTION

FEATURES

- **8, 10, or 12 Bit Resolution**
- **25 nsec. Settling (8 or 10 Bits)**
- **50 nsec. Settling (12 Bits)**
- **Unipolar or Bipolar Operation**
- **5 mA Output Current**

The DAC-HF series features ultra-fast current outputs for 8, 10, and 12 bit resolutions. These state-of-the-art digital to analog converters give output settling times of 25 nanoseconds maximum for 8 and 10 bits and 50 nanoseconds maximum for 12 bits. They can be used to drive a load resistor directly for up to ±1.2 V outputs or with a fast inverting operational amplifier (Datel System's AM-500) for up to ±10 V outputs at sub-microsecond settling times. The required feedback resistors are incorporated inside the unit and give a selection of five different output ranges by external pin connection.

The circuit uses high speed PNP current switches combined with a low impedance R-2R ladder network. The network is fabricated with nichrome thin-film resistors which are then laser trimmed for optimum linearity. The output current is 0 to +5 mA or ±2.5 mA with a 400 ohm output impedance.

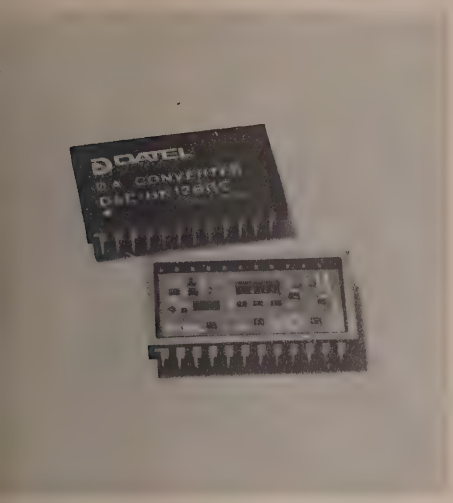
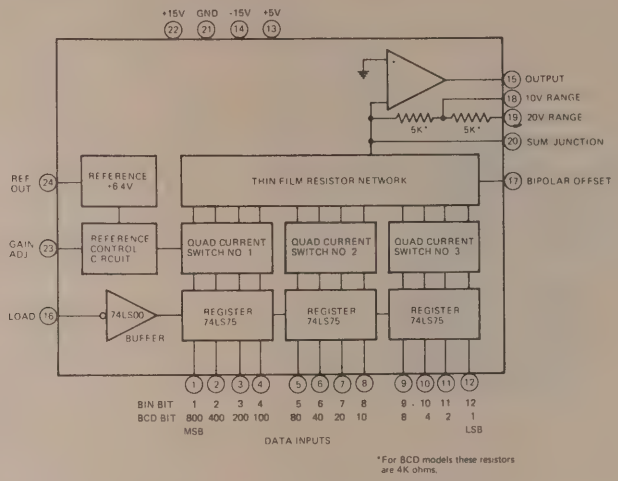
DAC-HK SERIES

HIGH PERFORMANCE 12 BIT DAC'S WITH INPUT REGISTER

DATEL SYSTEMS, INC.





FEATURES

- **12 Bit Resolution**
- **Input Register**
- **20 ppm/°C Tempco**
- **Binary, BCD, or 2's Comp. Coding**
- **3 μsec. Settling Time**

The DAC-HK series D/A converters are high performance 12-bit devices with a fast settling voltage output. They incorporate a level controlled input storage register and are specifically designed for systems applications such as data-bus interfacing with computers. When the "load" input is high data in the storage register is held, and when the load input is low data is transferred through to the DAC. There are three basic models available by coding option: binary, BCD, and two's complement. The output voltage ranges are externally pin-programmable and include: 0 to +2.5 V, 0 to +5 V, 0 to +10 V, ±2.5 V, ±5 V, and ±10 V.

Quad current switches are combined with a low T.C. thin film resistor network and a low T.C. Zener reference to achieve better than 20 ppm/°C gain tempco. Optimum linearity is attained by functional laser trimming of the thin film nichrome resistors.

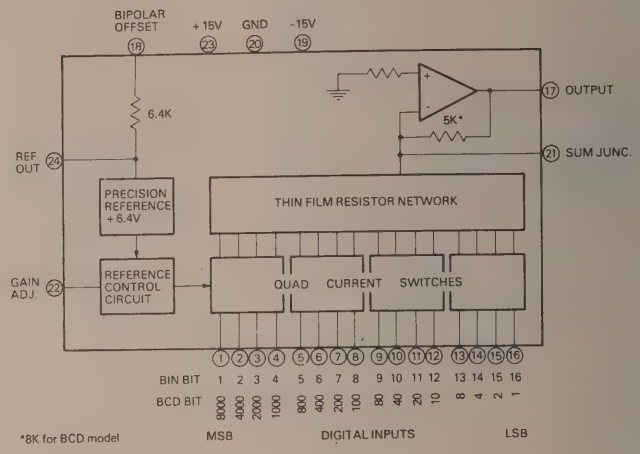
DAC-HP16B, DAC-HP16D

HIGH RESOLUTION D/A CONVERTERS



FEATURES

- **16 Bit Binary Model**
- **4 Digit BCD Model**
- **Linearity to 0.003%**
- **15 ppm/°C Tempco, Max.**
- **Voltage Output**

The DAC-HP series are high resolution D/A converters with voltage output. They are self-contained, including a low tempco zener reference circuit and output operational amplifier, all in a miniature 24 pin double spaced ceramic DIP package. There are two basic models in the series. The DAC-HP16B has 16 bit binary resolution with ±0.003% linearity while the DAC-HP16D has 4 digit BCD resolution with ±0.005% linearity. Input coding is complementary binary and complementary offset binary for the DAC-HP16B and complementary BCD for the DAC-HP16D. The binary version operates in both unipolar and bipolar modes with output voltages of 0 to +10 V and ±5 V; the BCD version operates in unipolar mode only with 0 to +10 V output.

The DAC-HP design incorporates thin film hybrid technology which has been in volume production. Selected low tempco nichrome on silicon thin film resistor networks are combined with tightly matched quad current switches to achieve 16 bit resolution.

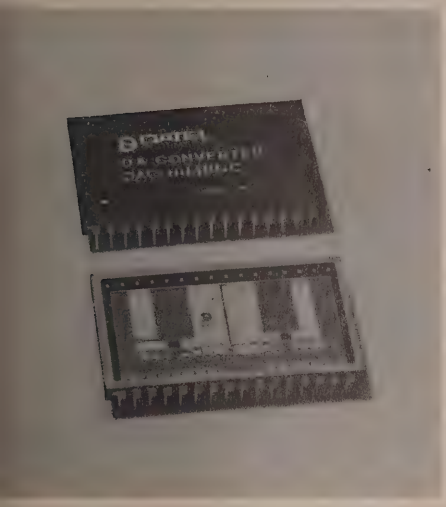
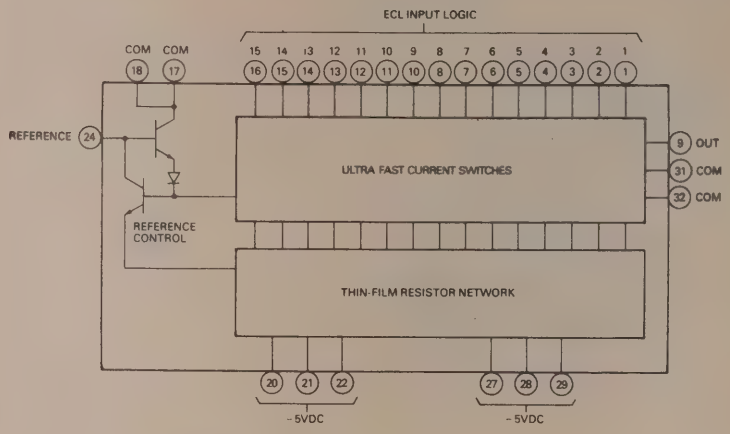
DAC-HU4B

ULTRA-FAST, 4 BIT D/A CONVERTER

DATEL SYSTEMS, INC.





FEATURES

- 4 Bit Resolution
- 25 nsec. Settling to 0.1%
- 24 mA Output Current
- 0.1% Linearity
- ECL 10,000 Input Logic

The DAC-HU4B is an ultra-fast 4 bit hybrid DAC which is specifically designed as a building block component for use with Datel System's ADC-HU3B A/D converters in ultra high speed two stage A/D converters. The DAC-HU4B has a 15 line ECL 10,000 complementary input designed to be driven from two ADC-HU3B's. The output current is 24 mA with all of the current switches on and settling time to 0.1% is only 25 nsec. By connecting the input logic lines together in groups of 8, 4, 2, and 1, complementary binary coding can be realized.

In order to be used in higher resolution A/D converters, this device has a linearity of 0.1%.

The gain temperature coefficient of this circuit is 15 ppm/°C without the external reference. The power to this device is supplied from an operational amplifier which operates from an external reference. The nominal supply voltage is −5 V at 25 mA.

SPECIFICATIONS, Typical at 25°C

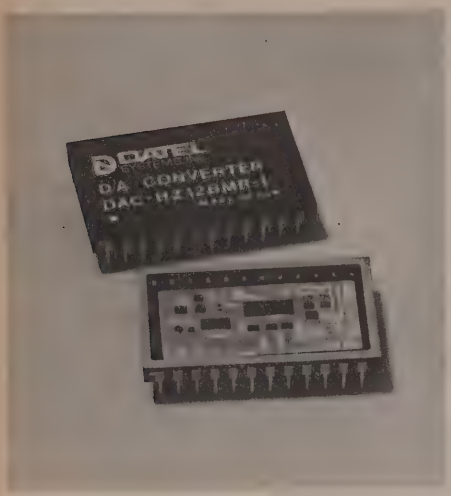
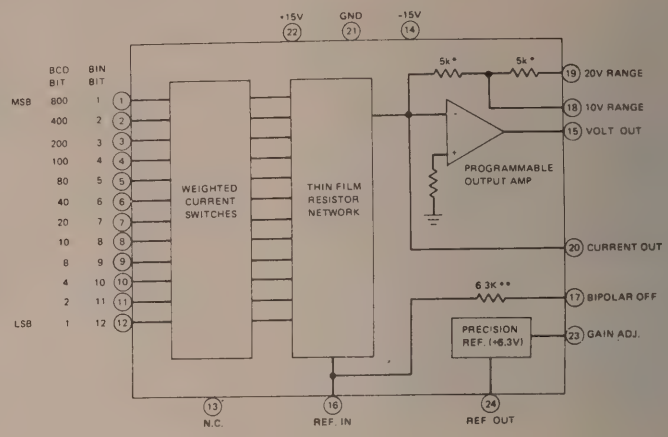
DAC-HZ12BMR-1, DAC-HZ12DMR-1

DATEL SYSTEMS, INC.

LOW DRIFT, HIGH PERFORMANCE 12 BIT D/A CONVERTERS





FEATURES

- **12 Bit Resolution**
- **10 ppm/°C Tempco**
- **Binary or BCD Coding**
- **3 μsec. Voltage Settling**
- **5 Output Ranges**

The DAC-HZ12BMR-1 and DAC-HZ12DMR-1 are low drift, hermetically sealed D/A converters which operate over the −25°C to +85°C temperature range. These models have 12 bit binary and 3 digit BCD coding respectively. With ±10 ppm/°C maximum tempco, they are specifically designed for demanding 12 bit applications where wider operating temperature range and low drift are essential. The analog output voltage is monotonic over the operating temperature range.

The DAC-HZ12BMR-1/DMR-1 utilizes quad current switches with a laser trimmed thin film resistor network, a precision zener reference circuit, a reference control circuit, and a fast output operational amplifier. Output voltage settling time is 3 μsec. and there are five pin selectable voltage ranges. The power supply requirement is ±15 VDC with no 5 volt logic supply necessary.

SPECIFICATIONS, Typical at 25°C

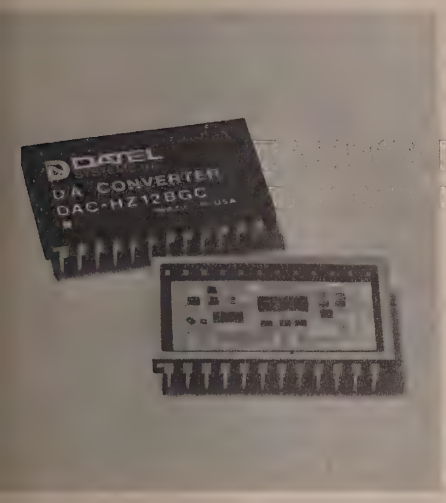
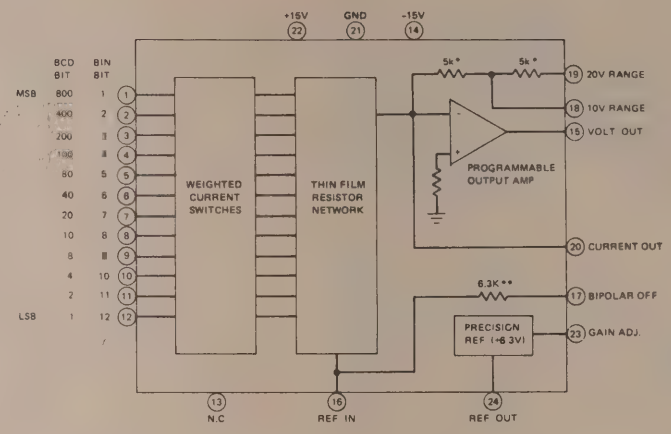
DAC-HZ12B SERIES

LOW COST, HIGH PERFORMANCE 12 BIT D/A CONVERTERS





FEATURES

- **12 Bits Binary**
- **3 Digits BCD**
- **5 Output Ranges**
- **3 μsec. Settling Time**
- **20 ppm/°C Tempco**

The DAC-HZ series are high performance, hybrid 12 bit binary and 3 digit BCD digital-to-analog converters. They are complete and self-contained with a precision internal reference and fast output operational amplifier. Pin programmable output voltage ranges are provided for a high degree of application flexibility; the output voltage ranges are 0 to +5 V, 0 to +10 V, ±2.5 V, ±5 V, and ±10 V with only unipolar ranges available on the BCD models.

The internal design utilizes three quad current switches, two thin film resistor networks, a precision zener reference circuit, reference control circuit and output amplifier. The thin film resistor networks are functionally trimmed with a laser to precisely set the binary weights of the current switches. The excellent tracking of the thin film resistors in conjunction with the tightly matched current switches results in a differential nonlinearity tempco of only 2 ppm/°C.

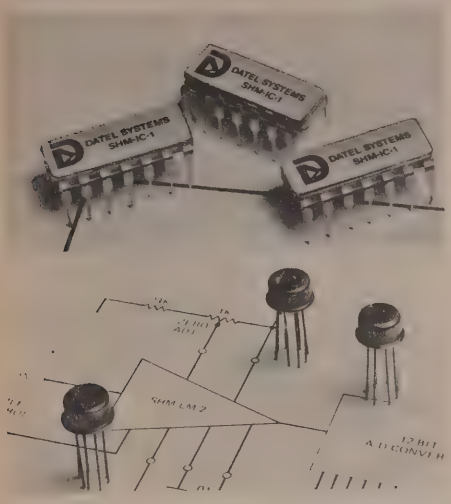
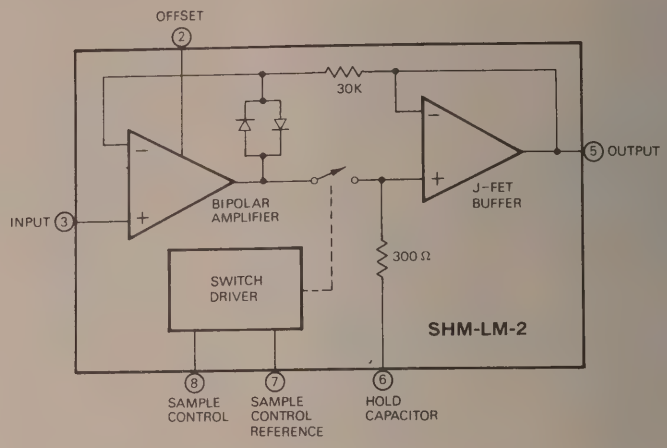
SHM-IC-1, SHM-LM-2

DATEL SYSTEMS, INC.

MONOLITHIC SAMPLE-HOLDS





FEATURES

- **Acquisition Time to 5 μsec.**
- **0.01% Accuracy**
- **Bandwidth to 2 MHz**
- **0.01% Feedthrough**
- **Low Cost**

These monolithic sample-hold devices feature excellent performance specifications at a low price. They are self-contained units requiring only an external hold capacitor for operation. The SHM-LM-2 operates in a fixed gain configuration of +1 while the SHM-IC-1 can be externally connected for gains of ±1 or for higher gains by means of two external resistors. Both models consist of a high impedance input amplifier, a fast electronic switch, and a high impedance output buffer amplifier. The circuit operates in a closed loop configuration for maximum accuracy.

Accuracy is 0.01% for both models making them useful in 12 bit A/D converter applications. For a 1000pF hold capacitor the acquisition time is 5 μsec. for the SHM-IC-1 and 6 μsec. for the SHM-LM-2. Better accuracy with lower feedthrough and hold mode droop can be achieved by using higher value hold capacitance such as .01 μF.

SPECIFICATIONS, Typical at 25°C, C_H = 1000pF

FEATURES

- **0.01% Accuracy (SHM-6)**
- **1.0 μsec. Acquisition Time (SHM-6)**
- **25 nsec. Acquisition Time (SHM-HU)**
- **50 MHz Bandwidth (SHM-HU)**
- **50 mA Output (SHM-6)**

These hybrid sample-hold circuits feature fast and ultra-fast acquisition times. The SHM-6 is designed for use with fast 12 bit A/D converters. Its accuracy is 0.01% and acquisition time is 1.0 μsec. maximum. Bandwidth is 5 MHz and aperture delay time is 20 nsec. In addition to its high accuracy and high speed this model also has a 50 mA output current. The input amplifier of the SHM-6 is an open loop transconductance amplifier which can be externally connected for closed loop gains of ±1 to ±10. The hold capacitor, of value 400pF, is included internally.

The SHM-HU is an ultra high speed sample-hold designed for video processing applications. It is specifically designed for use with Datel System's ADC-HU3B A/D converter and other ultra fast A/D's with resolutions up to 8 bits. It acquires a 5 V input change in just 25 nsec. and features a 10 psec. aperture uncertainty time. A 53 pF MOS hold capacitor is incorporated in the unit. The SHM-HU requires 4 external resistors and an external MH003 buffer amplifier.

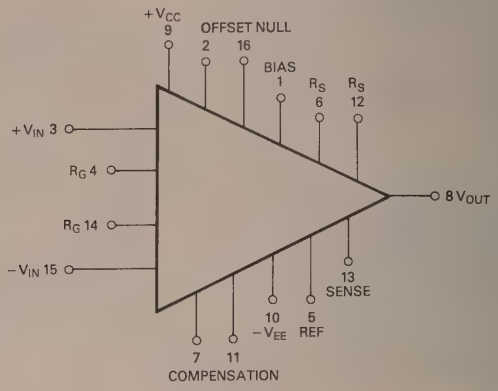
AM-435

DATEL SYSTEMS, INC.

MONOLITHIC, FET INPUT INSTRUMENTATION AMPLIFIER



FEATURES

- **2 x 10^{12} Ohms Input Z**
- **0.02% Gain Linearity**
- **105 dB min. CMRR**
- **Low Noise JFET Inputs**
- **Single Resistor Gain Adjust**

DESCRIPTION

The AM-435 is a low cost, high performance, monolithic instrumentation amplifier. Tightly matched JFET input devices give very high input impedance with very low bias currents and low input offset voltage drift. The AM-435 is ideal for applications where high differential source impedances are encountered.

This amplifier is programmed by means of two external resistors, R_S and R_G. With R_S at a set value the gain may be varied from 1 to 1000 by changing R_G. Provision is also made for an external offset adjustment by means of a trimming potentiometer. Input impedance is 2 x 10^{12} ohms with bias currents of 40 pA maximum. Common mode rejection is greater than 105 dB at a gain of 1000. Input noise current is only 0.01 pA RMS and gain nonlinearity is typically 0.02%. The input offset voltage drift is typically 10μV/°C and output offset voltage drift is 600μV/°C.

SPECIFICATIONS, Typical at 25°C, G=1000

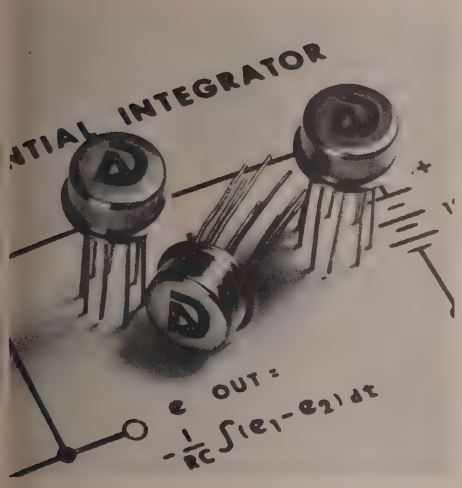
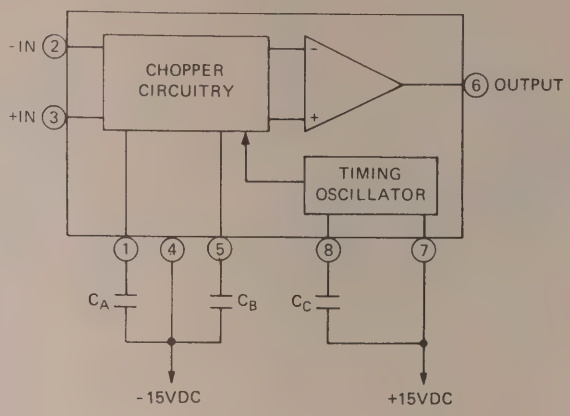
AM-490-2

MONOLITHIC, DIFFERENTIAL INPUT CHOPPER STABILIZED OP AMP





FEATURES

- **Differential Inputs**
- **120 dB CMR**
- **Chopper Stabilized**
- **Drift as Low as 0.1 μV/°C**
- **5 x 10^8 Open Loop Gain**

Model AM-490-2 is a monolithic, chopper stabilized operational amplifier with differential inputs; it is specifically designed for applications requiring ultra-stable DC characteristics together with good bandwidth. This device is available in three different grades of maximum input offset voltage drift: 1.0, 0.3, and 0.1μV/°C. The extremely low input offset voltage drift and initial input offset voltage of only 20μV eliminate the requirement for zero adjustment in most applications. Other important input characteristics include an input impedance of 100 megohms, input bias current of 150pA, and input offset current drift of 1pA/°C. This permits the AM-490-2 to operate accurately with source impedances over 100 kilohms. A common mode rejection of 120 dB minimum and open loop gain of 5 x 10^8 result in extremely low output errors. Long term stability is typically 5μV per year.

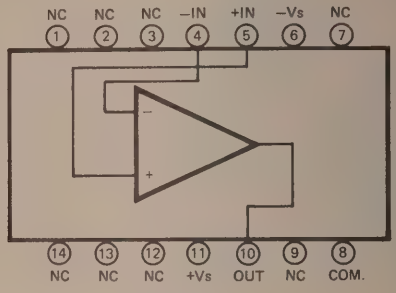
AM-500

ULTRA-FAST HYBRID OP AMP

DATEL SYSTEMS, INC



FEATURES

- **200 nsec. Settling to .01%**
- **1000V/μsec. Slew Rate**
- **100 MHz Gain Bandwidth**
- **10^6 Open Loop Gain**
- **50 mA Output Current**

The AM-500 series amplifiers are ultra-fast settling operational amplifiers for use in inverting applications. A unique feedforward amplifier design combines the characteristics of a low drift DC amplifier with those of a very fast AC amplifier. For optimum fast settling performance, this amplifier has an open loop gain roll-off of 6 dB per octave to beyond 100 MHz. Miniature thin-film hybrid construction permits an optimum combination of semiconductor devices and minimum lead lengths to realize the amplifier circuitry. Applications for the AM-500 series include fast integrators, sample-holds, fast waveform drivers, and fast D/A converter output amplifiers.

Output settling time is 200 nanoseconds max. to .01% for a 10 volt step change. Slew rate is 1000V/μsec. for positive output transitions and 1800V/μsec. for negative transitions. This high slew rate permits undistorted reproduction of a full load, 20V peak to peak sine-wave out to 16 MHz. Gain bandwidth product is 100 MHz minimum.

SPECIFICATIONS, Typical at 25°C

	AM-500

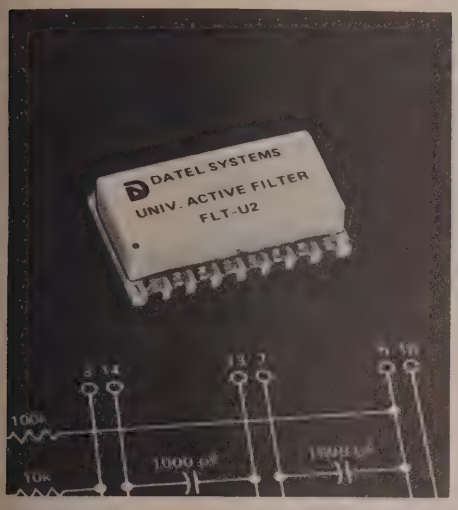
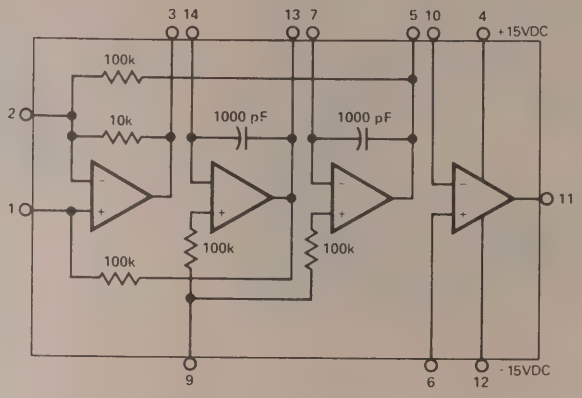
FLT-U2

UNIVERSAL HYBRID ACTIVE FILTER





FEATURES

- **State Variable Filter**
- **LP, BP, or HP Functions**
- **2 Pole Response**
- **Low Noise Amplifiers**
- **Low Cost**

The FLT-U2 is a universal active filter manufactured with thick film hybrid technology. It uses the state variable active filter principle to implement a second order transfer function. Three committed operational amplifiers are used for the second order function while a fourth uncommitted op amp can be used as a gain stage, summing amplifier, buffer amplifier, or to add another independent real pole.

Two-pole lowpass, bandpass, and highpass output functions are available simultaneously from three different outputs, and notch and allpass functions are available by combining these outputs in the uncommitted op amp. To realize higher order filters, several FLT-U2's can be cascaded. Q range is from 0.1 to 1,000 and resonant frequency range is 0.001 Hz to 200 kHz. Frequency stability is .01%/°C and resonant frequency accuracy is within ±5% of calculated values. Frequency tuning is done by two external resistors and Q tuning by a third external resistor.

SPECIFICATIONS, Typical at 25°C

	FLT-U2
Frequency Range	0.001 to 200 kHz
Q Range	0.1 to 1,000
f_0 Accuracy	±5%
f_0 Tempco	100 ppm/°C

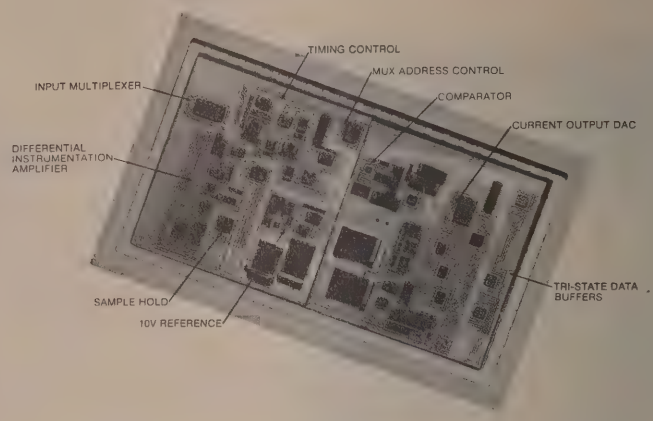
HDAS-8, HDAS-16

12 BIT HYBRID DATA ACQUISITION SYSTEMS

DATEL SYSTEMS, INC



FEATURES

- **12 Bit Resolution**
- **8 or 16 Channels**
- **Internal Instrumentation Amp**
- **50 kHz Throughput Rate**
- **Three State Outputs**

The HDAS-8, with 8 differential input channels, and the HDAS-16, with 16 single ended input channels, are industry's first complete 12 bit data acquisition systems in a single hybrid package. Acquisition and conversion times combined are 20μsec. maximum, giving a 50 kHz throughput rate. The 12 bit output data can be transferred out in three 4 bit bytes by means of three state data bus drivers. Output coding is straight binary for unipolar operation and offset binary for bipolar operation.

The HDAS circuitry includes an analog multiplexer, programmable gain instrumentation amplifier, sample-hold circuit with MOS hold capacitor, 10 volt buffered reference, 12 bit A/D converter, three state bus driver and digital control circuitry. The instrumentation amplifier can be programmed by a single external resistor for gains from 1 to 1000. This is an important feature for processing signals in the range of 10mV to 10 V full scale.

SPECIFICATIONS, Typical at 25°C

	HDAS-8	HDAS-16
No. Channels	8	16
Input Type	Differential	Single Ended
Input Range, unipolar FS	+10mV to +10 V	+10mV to +10 V
Input Range, bipolar FS	±10mV to ±10 V	±10mV to ±10 V
Common Mode Range	±11 V	—
Input Resistance	100 Meg.	100 Meg.
Input Bias Current, max.	200 pA	200 pA
Input Off. Voltage Drift	20μV/°C+(10μV/°C)G	
Input Gain Equation	G = 1+20K/R_G	
Channel Addressing	3-Bit Code	4-Bit Code
Address Input Logic	DTL, TTL	DTL, TTL
Resolution	12 Bits	12 Bits
Linearity Error, max.	½ LSB	½ LSB
Differential Nonlinearity, max.	½ LSB	½ LSB
Total Error, max.*	0.025%	0.025%
Gain Tempco, typ.	10 ppm/°C	10 ppm/°C
Gain Tempco, max.	30 ppm/°C	30 ppm/°C
No Missing Codes	Over Oper. Temp. Range	
Power Supply Sensitivity	0.01%/%	0.01%/%
Throughput Rate, max.	50 kHz	50 kHz
Acquisition Time	9 μsec.	9 μsec.
Conversion Time	9 μsec.	9 μsec.
Aperture Delay Time	100 nsec.	100 nsec.
Sample-Hold Droop	1 μV/μsec.	1 μV/μsec.
Feedthrough at 1 kHz, max.	0.01%	0.01%
Output Coding, unipolar	Straight Bin	Straight Bin
Output Coding, bipolar	Offset Bin.	Offset Bin.
Power Requirement	+15VDC at 67 mA max. −15 VDC at 71 mA max. +5VDC at 155 mA max.	
Package	Miniature 62 Pin

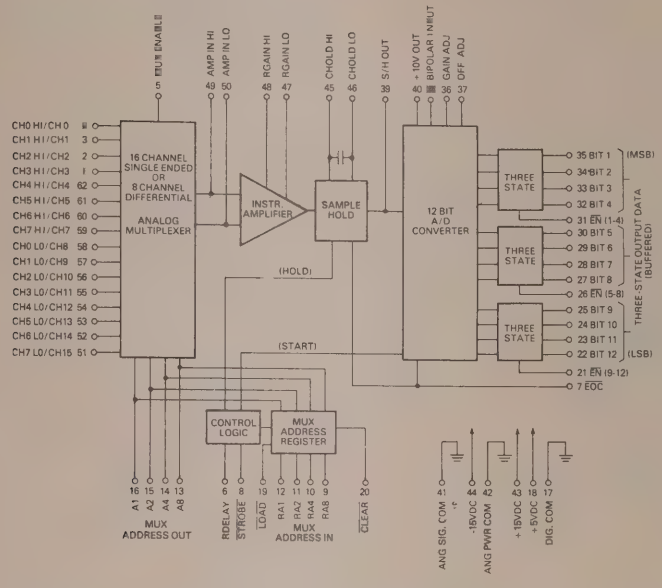
Add Dept. EM to address to tell them you saw it in eem

eem/1978



The internal sample-hold device has excellent characteristics and has its own self contained MOS hold capacitor. Aperture delay time is 100nsec. and hold mode droop is 1μV/μsec. Nonlinearity error is less than ½ LSB and total error is 1 LSB maximum at 50 kHz throughput rate.

The HDAS units are especially useful for microcomputer based measurement and control systems. The package is a miniature 2.3 × 1.4 × 0.24 inches (58 × 36 × 6 mm) with 62 pins.

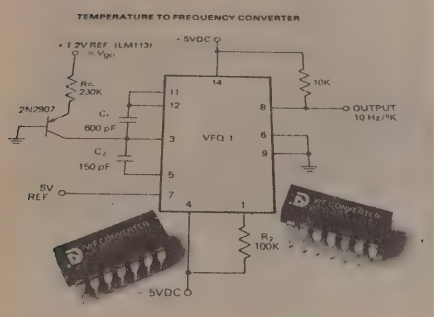
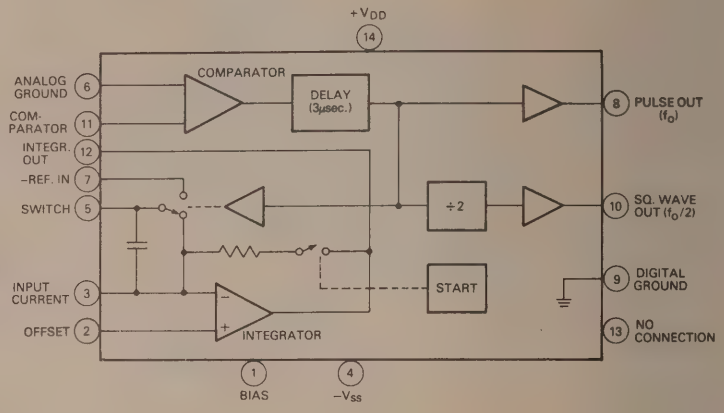
VFQ-1

MONOLITHIC VOLTAGE TO FREQUENCY CONVERTER





FEATURES

- **10 kHz to 100 kHz FS**
- **0.01% Typ. Linearity at 10 kHz**
- **25 ppm/°C Tempco**
- **Open Collector Output**
- **Pulse or Square Wave Output**

Model VFQ-1 is a new monolithic voltage to frequency converter using combined bipolar and CMOS technologies. This device accepts a positive analog input current and produces an output pulse train with a frequency linearly proportional to an input current. In addition to the pulse output, there is also a square wave output at half the pulse frequency. The full scale output pulse rate can be set from 10 kHz to 100 kHz by means of two external capacitors. Linearities are typically 0.01% for 10 kHz full scale and 0.1% for 100 kHz full scale; linearity holds all the way down to zero.

The VFQ-1 internal circuitry includes an operational integrator, a comparator, digital delay circuit, single-pole double-throw electronic switch, a start circuit, a divide by two circuit, and two output driver circuits. It operates on the well-known charge balancing integrator principle. The two outputs are open collector NPN which can sink up to 10 mA and give a logic HI output up to +18 volts.

SPECIFICATIONS Typical at 25°C

	VFQ-1
Output Frequency	0 to 10 kHz 0 to 100 kHz
Linearity 10 kHz FS	0.01%
Linearity, 100 kHz FS	0.1%
Gain Tempco	25 ppm/°C
Output	Open Collector TTL
Output Waveforms	Pulses at f_O Sq. Wave at $f_O/2$
Output Settling Time	2 pulses
Input Current Range	0 to +10 μA
Input Overrange	+50 μA
Input Offset Voltage	50 mV
Reference Input	−3.5 to −6.5 V
Zero Drift	50 μV/°C max.
Power Supply Sensitivity	0.025%/V
Power Requirement	±5 V at 4 mA
Package	16 Pin DIP

SINETRAC SERIES

A/D-D/A PERIPHERAL BOARDS THAT SLIDE INTO YOUR COMPUTER

Datel's SineTrac Series is a family of slide-in A/D-D/A analog peripheral boards for popular mini- and microcomputers. Datel offers SineTrac models for DEC LSI-11 and PDP11 computers; Data General NOVA and microNOVA models; and for microprocessor-based computers from Intel (SBC and MDS series), Motorola (M6800 EXORciser) and National Semiconductor (BLC-80).

All models feature outstanding performance with A/D throughput periods of 20 microseconds per channel and D/A settling of 4 microseconds. Extraordinary channel density is achieved by using Datel's in-house-manufactured hybrid A/D's, D/A's, and subminiature power supply modules. Most SineTrac models include analog channel address registers and control logic for automatic sequential channel scanning. Depending on the computer type, most models accept interrupt and DMA programming with software control of system mode.

All SineTrac series include a comprehensive diagnostic assembly language program on paper tape. Full systems manuals supplied with each product include a full listing of this program plus much more.

The SineTrac series offers a user relief from typical A/D-D/A interfacing problems such as interface circuit design, digital I/O cabling (only analog signal cabling is required), and a strong head start toward handling problems.

Analog specifications are excellent including 12-bit binary A/D-D/A resolution and accuracy, 100 megohm A/D input impedance, and 50 milliohm D/A output impedance.

Contact Datel for complete individual brochures on the SineTrac Series.

SINETRAC SERIES

SPECIFICATIONS
COMMON TO ALL SINETRAC MODELS

DATA ACQUISITION SECTION (A/D ANALOG INPUTS)

SPECIFICATIONS
(Typical @ +25°C, dynamic conditions, unless otherwise specified)

ANALOG INPUTS

Number of Channels	Up to 64 channels, depends on model.
Channel Expansion	Up to 256 single-ended or differential channels.
Full Scale Input Voltage Ranges	0 to +5 volts 0 to +10 volts −5 to +5 volts −10 to +10 volts
Common Mode Range	±10 volts maximum
Input Overvoltage	±35 volts maximum sustained (no damage)
Input Impedance	100 megohms differential or to ground.
Input Bias Current	3nA typical, 10nA maximum
Input Capacitance	10pF, OFF channel, 100pF, ON channel to ground.

PERFORMANCE

Accuracy @ +25°C	Within ±0.025% of full scale range.
Resolution	12 Binary Bits (1 part in 4096)
Nonlinearity	±½ LSB maximum
Differential nonlinearity	±½ LSB maximum
Gain error	Adjustable to zero
Offset or Zero Error	Adjustable to zero
Gain Temperature Drift	Within ±30ppm of FSR/°C
Offset or Zero Temperature Drift	Within ±7ppm of FSR/°C
Common Mode Rejection	70dB min., DC to 1kHz, with 1 Kilohm unbalance
Power Supply Rejection	100dB to +5V Bus

DYNAMIC CHARACTERISTICS

Throughput Period	20 Microseconds max.
Acquisition Time	12 Microseconds
A/D Conversion Time	8 Microseconds
Aperture Time	50 nanoseconds
Sample/Hold Switch Feedthrough	0.01% Maximum
MUX Crosstalk from OFF Channels	0.01% @ 1KHz

DIGITAL OUTPUTS

Output Coding	Straight Binary (unipolar) Offset Binary (bipolar) 2's Complement (bipolar)	Jumper Selected

POWER CONSUMPTION
2.5 Amps or less typical @ +5VDC supplied from CPU bus connector. On-board DC/DC converter supplies ±15VDC to linear circuits.

PHYSICAL

Operating Temperature Range	0° to +70°C
Storage Temperature Range	−25°C to +85°C

DATA DISTRIBUTION SECTION (D/A ANALOG OUTPUTS)

ANALOG OUTPUTS

Number of Channels	Up to 8 single-ended or 4 single-ended per board.
Channel Expansion	256 Channels addressable
Full Scale Output Voltage Ranges	0 to +5 volts 0 to +10 volts −2.5 to +2.5 volts −5 to +5 volts −10 to +10 volts
Input Coding	Straight Binary (unipolar) Offset Binary (bipolar) 2's Complement (bipolar)
Output Impedance	50 milliohms
Output Current	±5mA min., short circuit proof to ground.

PERFORMANCE

Nonlinearity	±½ LSB, maximum
Differential nonlinearity	±½ LSB maximum
Gain Error	Adjustable to zero using pot for each channel.
Offset or Zero Error	Adjustable to zero using a pot for each channel.
Scan Period Adjust	1 to 10 milliseconds
Gain Temperature Drift	±30ppm of output/°C
Zero Temperature Drift	(Unipolar output) ±5ppm of FSR/°C
Offset Temperature Drift	(Bipolar output) ±15ppm of FSR/°C
Settling Time	4 microseconds to ±½ LSB
Power Supply Rejection	±0.02% of FSR per 1% variation.

32S = 32 Single-ended	2 = Two D/A's	X = Not Included (External ±15V @ 150 mA is required)	2 = Bit-Programmable Gain Differential Amplifier (PGA). ×1,2,4,8 Gains
16D = 16 Differential*	3 = No D/A's (A/D's Only)		3 = Differential Instrumentation Amplifier, user-selected fixed gain resistor, ×1 to ×1000

*For differential systems, the PGA or Differential Instrumentation Amplifier **must** be used.
All models do not include Data General MN603 and MN636 Controller Circuits.
All models will be ±10V, 2's complement coding
Users may rewire other ranges and coding.

PRICES

	Price, Single Quantity
Model ST-MNOVA32S3X1..... (16 Single-ended A/D channels, no D/A, no PS, fixed gain). Does not include Data General MN603 and 636 controller circuits.	$630
For 16 additional A/D channels (16D or 32S total).....	Add $40
For each D/A channel.....	Add $60
For the ±15V DC/DC Power Converter.....	Add $80
For programmable gain amplifier (X1, X2, X4, X8 Gains).....	Add $125
For differential instrumentation amplifier (User-selected fixed gain resistor, X1 to X1000).....	Add $90

STAND-ALONE D/A BOARDS

MODEL NUMBER	NOTES	PRICE (SINGLE QUANTITY)
ST-MNOVA-DA4A	DC/DC Power Converter is Included	$630
ST-MNOVA-DA4B	No DC/DC Converter (External ±15 Vdc Power @ 160 mA is required)	$550
ST-MNOVA-DA8B	No DC/DC Converter (External ±15 Vdc Power @ 320 mA is required)	$785

SLAVE A/D MULTIPLEXER CHANNEL EXPANDERS

(An A/D-D/A Master Board is required for control)

MODEL NUMBER	NOTES	PRICE (SINGLE QUANTITY)
ST-MNOVA-ADX64S	Adds 64 additional single-ended channels.	$345
ST-MNOVA-ADX32D	Adds 32 additional differential channels. The PGA or Diff. Inst. Ampl. on the master board is required.	$345

NOTE: Single-ended and differential inputs cannot be mixed.

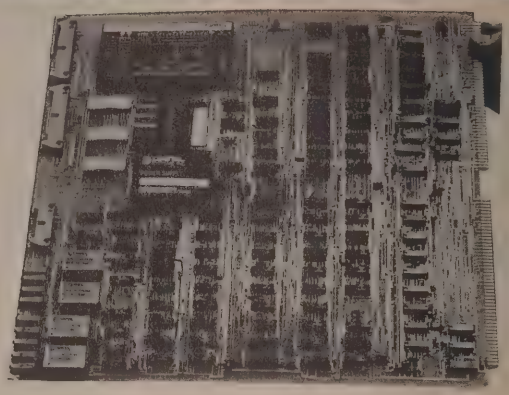
A/D-D/A COMPUTER PERIPHERAL FOR DATA GENERAL'S NOVA SERIES

SINETRAC NOVA SERIES

FEATURES

- **64 A/D and 4 D/A Channels on a single board that slides directly into Data General's NOVA series minicomputers.**
- **Expandable up to 256 A/D and/or D/A channels.**
- **Speeds up to 45,000 A/D Samples per Second**
- **Choice of Program Control, Interrupt, or DMA**
- **Comprehensive Systems Manual and Paper Tape Diagnostic Program Included**



ORDERING INFORMATION

ST-NOVA

A/D - D/A Location

A/D	D/A
1 = On-board	On-board
2 = None	On-board
3 = On-board	None
4 = On-board	Remote
5 = Remote	On-board
6 = Remote	Remote
7 = Remote	None
8 = None	Remote

Remote refers to A/D and/or D/A contained in the System 256 housing. System 256 must be ordered separately. Remote models delete certain analog signal components.

Configuration

S = Single-ended 64 A/D Channels*
D = Differential 32 A/D Channels*
X = Use for no on-board A/D Channels

* On-board A/D configurations are supplied with a capacity of 64 single-ended or 32 differential channels.

System Data Coding

1 = Straight Binary (unipolar) or Offset Binary (bipolar), with no sign extension
2 = 2's Complement (bipolar), with sign extension

Full Scale A/D Input Range

A = 0 to +5V
B = 0 to +10V
C = ±5V
D = ±10V
X = Use if on-brd A/D's are not included

A/D Resolution

1 = 8 Bits*
2 = 10 Bits*
3 = 12 Bits*
4 = 14 Bits*
5 = Use if A/D's are not included

*On-board A/D's must be 12 bits. This designator determines bit-positioning for both on-board and remote A/D's.

Full Scale D/A Output Range

A = 0 to +5V
B = 0 to +10V
C = ±5V
D = ±10V
X = Use if on-brd D/A's are not included

D/A Resolution

1 = 12 Bits*
2 = 14 Bits*
3 = Use if D/A's are not included

*On-board D/A's must be 12 bits. D/A's with 12 and 14 bit resolution will accept 8 and 10 bit inputs. Bits may be repositioned for desired voltage output swing. This designator determines bit-positioning for both on-board and remote D/A's.

SYSTEM 256 (REMOTE A/D-D/A) MUST BE ORDERED SEPARATELY IF USED

PRICES (Single Quantity)

A/D-D/A COMPUTER PERIPHERALS FOR DEC'S LSI-11

SINETRAC LSI SERIES

FEATURES

- **64-channel analog input (A/D) and 2 output (D/A) channels fit directly inside DEC's LSI-11 series mini-computer.**
- **Data acquisition rates up to 25,000 samples per second.**
- **Two modes of programming.**
  - **Program-controlled mode**
  - **program-interrupt mode**
- **Expandable up to 256 A/D and/or 256 D/A channels.**
- **12-bit analog resolution with choice of coding and voltage ranges.**

A/D-D/A MASTER BOARD
Model Numbering

ST-LSI

Number of A/D Channels	Number of D/A Channels	Programmable Gain Amplifiers or Instrumentation Amplifiers	DC/DC Power Converter
32S = 32 Single-ended	Ø = No D/A's	P = PGA	1 = Included
16D = 16 Differential*	2 = 2 D/A Channels	D = Differential Instrumentation Amplifier (User-selected fixed gain)	2 = Not Included (Extra ±15V Power Required)
16S = 16 Single-ended		X = None (SE Only)	

Standard inputs are ±10V full scale and 2's complement coding. Users may rewire jumpers for other ranges and coding.

*For differential systems, the PGA or Differential Instrumentation Amplifier must be used.

PRICES — A/D-D/A MASTER BOARD

	Price, Single Quantity
MODEL ST-LSI16SØX2 (16 SE A/D Channels, no D/A, no PS)	$625
For 16 Additional A/D Channels (16D or 32S Total)	Add $ 40
For 2 D/A Channels (Includes current outputs)	Add $180
For Programmable Gain Amplifier (x1,x2,x4,x8 Gains)	Add $125
For Differential Instrumentation Amplifier (User-selected fixed gain resistor, x1 to x1000)	Add $ 90
For the ±15V DC/DC Power Converter	Add $ 80

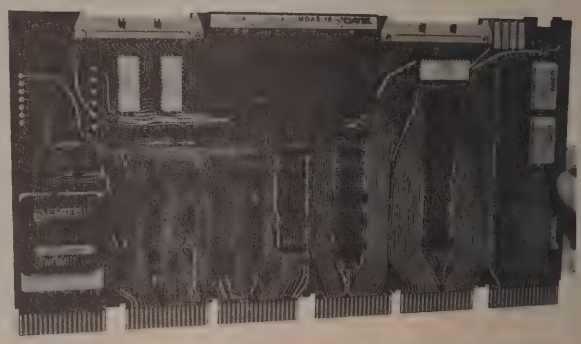
A/D-D/A PERIPHERALS FOR DEC'S PDP-11'S

SINETRAC PDP SERIES

FEATURES

- ▶ 64 A/D channels plus 2 D/A channels optional on one slide-in PDP 11 board
- ▶ A/D Throughput period 20 microseconds—provides data bursts in DMA mode up to 45,000 samples per second
- ▶ Three Scan Start Methods
  1. Program scan start (via interrupt or program instruction)
  2. DMA-board adjustable scan timer
  3. External start pulse
- ▶ Fast Automatic Sequential DMA Addressing, Lowest CPU Overhead. On-board channel address counters and start/final address logic
- ▶ Complete Systems manuals included.
- ▶ Paper Tape diagnostic programs included.
- ▶ Three Programming Methods
  1. Program Control Interface (PCI)
  2. Interrupt Service Interface (ISI)
  3. Direct Memory Access (DMA)



THREE SYSTEM LEVELS

The Sine Trac PDP is available in 3 versions:

1. A/D-D/A slide-in cards only. 64 single-ended A/D channels for only $1295 including manual and programs.
2. A/D-D/A card plus a wire-wrapped connector block, accessory cards and I/O cables.
3. As an interface to Datel's high performance System 256 remote A/D-D/A housing.

PRICE LIST

SineTrac Card Only ST-PDP1X Series

Model*	Description	Price (Singles)
ST-PDP1X1C5___	64 SE or 32 Diff. A/D Chan., no D/A Chans.	$1235.00
ST-PDP1X2E X__	No A/D, 2D/A Chan.	$ 935.00
ST-PDP1X3C____	64 SE or 32 Diff. A/D Chan., 2 D/A Chan	$1315.00

SineTrac Card plus Accessory Cards ST-PDP2 Series

Model*	Description	Price (Singles)
Program Control Interface		
ST-PDP2P1C5___	64 SE or 32 Diff. A/D Chan., no D/A Chans.	$2385.00
ST-PDP2P2E X__	No A/D Chan., 2 D/A Chan.	$2085.00
ST-PDP2P3C____	64 SE or 32 Diff. A/D Chan., 2 D/A Chan.	$2465.00
Interrupt Service Interface		
ST-PDP2S1C5___	64 SE or 32 Diff. A/D Chan., no D/A Chan.	$2385.00
ST-PDP2S3C____	64 SE or 32 Diff. A/D Chan., 2 D/A Chan.	$2465.00
Direct Memory Access		
ST-PDP2D1C5___	64 SE or 32 Diff. A/D Chan., no D/A Chan.	$2625.00
ST-PDP2D3C____	64 SE or 32 Diff A/D Chan., 2 D/A Chan.	$2700.00

SineTrac/System 256 Configuration with ST-PDP Card, and Accessory Cards ST-PDP3 Series

Model*	Description	Price (Singles)
Program Control Interface		
ST-PDP3P4C____	64 SE or 32 Diff. On-board A/D Chans., Remote D/A Chans.	$2700.00
ST-PDP3P5_____	Remote A/D Chans., 2 On-board D/A Chans.	$2430.00
ST-PDP3P6_____	Remote A/D Chans., Remote D/A Chans.	$2570.00
ST-PDP3P7	Remote A/D Chans., no D/A Chans.	$2570.00
ST-PDP3P8_____	No A/D Chans., Remote D/A Chans.	$2570.00
Interrupt Service Interface		
ST-PDP3S4C____	64 SE or 32 Diff. On-board A/D Chans., Remote D/A Chans.	$2730.00
ST-PDP3S5_____	Remote A/D Chans., 2 On-board D/A Chans.	$2430.00
ST-PDP3S6_____	Remote A/D Chans., Remote D/A Chans.	$2530.00
ST-PDP3S7_____	Remote A/D Chans., no D/A Chans.	$2530.00
Direct Memory Access		
ST-PDP3D4C____	64 SE or 32 Diff. On-board A/D Chans., Remote D/A Chans.	$2975.00
ST-PDP3D5_____	Remote A/D Chans. 2 On-board D/A Chans	$2675.00
ST-PDP3D6_____	Remote A/D Chans., Remote D/A Chans.	$2815.00
ST-PDP3D7_____	Remote A/D Chans., no D/A Chans.	$2815.00

SYSTEM 256

HIGH PERFORMANCE ANALOG I/O SYSTEM

FEATURES

- **Expansion to 512 single-ended A/D channels or 64 D/A channels**
- **A/D resolution up to 14 bits at 60 microseconds throughput period**
- **A/D throughput periods down to 4 microseconds for DMA I/O rates up to 200,000 samples/second**
- **Relay multiplexer option for 300V RMS common mode voltage with very high isolation**
- **Up to 32 Simultaneous Sample/Hold amplifiers for fast dynamic events**
- **Minicomputer-style, LED/Toggle Switch, binary front panel**
- **Datel SineTrac interfaces to PDP-11, NOVA, SBC-80, BLC-80**

System 256 is a complete high reliability computer input-output system for analog signals. It is capable of operating *on-line* or *off-line.* It has been designed to provide a versatile and permanent solution to the problem of interfacing analog signals to and from a digital computer. The modular principle used throughout enables the user to realize the most economic solution to any problem while maintaining maximum flexibility. Further expansion to an initial system is made by plug-in cards.

A wide range of options outlined elsewhere in this catalog allows a comprehensive system to be specified for applications to an instrumentation or control problem.

System 256 offers the flexibility, speed, economy and reliability necessary in today's world of real time applications.

It can function as an interface between an analog and digital computer in hybrid computer systems or as a peripheral device for general purpose digital computers.

It fills a growing need in industrial process control systems.

The ability to mix Analog Multiplexers, A/D's, Sample and Hold amplifiers and D/A's in virtually any configuration makes System 256 a valuable and dynamic systems tool.

GENERAL DESCRIPTION

The most unique feature of System 256 is its large analog input channel capacity while at the same time providing extremely low power consumption. The power consumed is a fraction of any system offered today while providing four times the channel capacity in the same package area. System 256 offers up to 256 analog channels and 32 Digital-to-Analog channels in a 19"Wx19"Dx3.5"H rack mounted enclosure, while competitors' systems offer 64 analog channels and 8 Digital-to-Analog channels in the same area, and still System 256 consumes less power. System 256 utilizes C/MOS (Complementary Metal Oxide Silicon) logic throughout.

C/MOS logic provides the necessary high-speed capability while at the same time drastically reduces power consumption. The quiescent power consumed by C/MOS logic is extremely low, or more precisely, the product of the supply voltage and the leakage current of the device (measured in pA). Its dynamic power consumption is somewhat more complex in that it is dependent on the supply voltage, operating speed and load capacitance. With a supply voltage

of +15V operating at IMHz into 15pF, the dynamic power consumption per logic function is approximately ImW. When this is compared with TTL logic at approximately 10.5mW per logic function, both quiescent and dynamic, it can be seen that a considerable reduction in power dissipation throughout the system will result by using C/MOS logic rather than TTL or DTL logic. The advantages of this low power dissipation in the system are obvious — less drift due to temperature rise, smaller power requirements, no cooling required, and more hardware per area.

SYSTEM DESCRIPTION

System 256 is designed to accept up to 256 single-ended or 128 differential analog signals plus 64 simultaneous sample & hold channels in the basic package. The analog inputs are multiplexed one at a time into a high impedance buffer amplifier then supplied to a sample & hold amplifier. The buffered analog signals are converted to digital data via a high speed successive approximation Analog to Digital Converter of up to 14 bits. The analog multiplexing process may be accomplished in either a sequential scan or a random address mode of operation. The digital output data is then fed to an LSB (least significant bit) positioning circuit which assures that regardless of the resolution of the converter, the LSB will always be on the extreme right hand position. This is in compliance with most minicomputer programming requirements.

THROUGHPUT TIME	A/D RESOLUTION			
	8 Bits	10 Bits	12 Bits	14 Bits
100 KHz	√	√ (opt)	√ (opt)	
70 KHz		√ (opt)		
50 KHz		√	√	
17 KHz				√

SYSTEM THROUGHPUT TIME VS RESOLUTION

250 KHz., 12 Bits Optional

Display and Control in both the Local and Remote mode of operation are provided on the front panel. This includes an LED display of digitized input data and A/D-D/A channel address. The Local Control features allow selection of input A/D channel address via an advance pushbutton switch, continuous conversion cycles on the same channel via a convert pushbutton switch, D/A channel address and manual insertion of D/A data via toggle switches.

Contained in the same package are provisions for supplying up to 32 Digital to Analog Converters. This conversion process again utilizes the LSB positioning circuit and is supplied with C/MOS storage registers. The Digital to Analog Converters accept up to 12 binary bits and generate an analog output corresponding to the selected channel. Four standard voltage range outputs are supplied to provide up to 10 milliamperes.

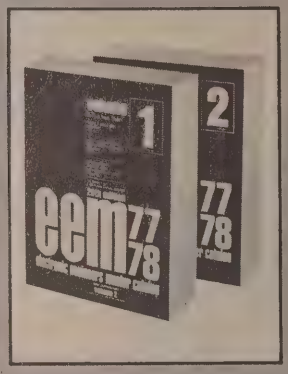
WE KNOW OUR STUFF

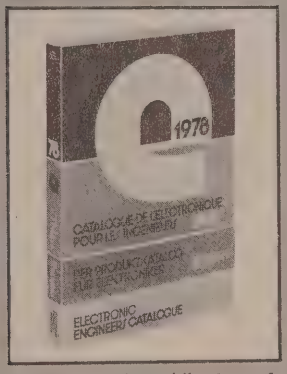
41 YEARS OF EXPERIENCE IN CATALOGING, 21 EDITIONS OF eem

eem/ELECTRONIC ENGINEERS MASTER CATALOG —



The "blue-ribbon" catalog/directory that has become "the standard of the industry" for electronic engineers, buyers and specifiers.

ELECTRONIC ENGINEERS CATALOGUE



The new catalogue/directory of electronic products available to and from Western Europe and the United Kingdom. Designed especially for the European electronics engineer.

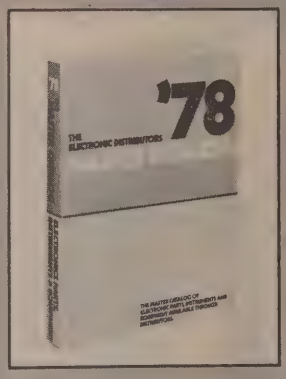
eem FILE SYSTEM —

The only filing system designed especially for the electronics engineer. Instant retrieval and organization of data sheets and catalogs.

UTP CUSTOM CATALOGS —

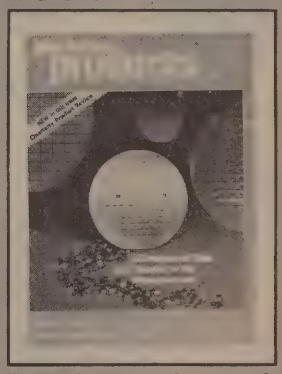
The Cadillac of individualized catalogs for the electronic parts distributor, featuring solely his lines and services.

ELECTRONIC DISTRIBUTORS MASTER CATALOG —



The only national catalog designed exclusively for distributors and their customers featuring electronic parts, instruments and equipment.

ELECTRONIC PRODUCTS MAGAZINE —

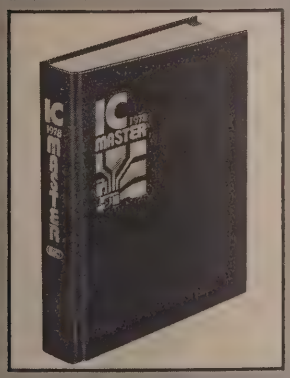


The products magazine . . . A 100% product-oriented magazine including hundreds of new products and special features every month.

UNITED COST AND PRICING SERVICES —

The electronic distributors' proven method of being up to the minute on his cost and selling prices.

IC MASTER AND THE UPDATES —



The only complete single-source directory including all IC devices manufactured in the United States. Updated three times yearly with accumulative supplements.

DIRECT SALES CATALOG

Welcome

to the fourth edition of DIGITAL's Direct Sales Catalog. This new edition continues our tradition of offering you the latest technology products in computer hardware, supplies, and accessories.

Take advantage of Direct Catalog buying . . .

DELIVERY — FAST! Most orders are shipped "off-the-shelf" within 24 hours after we receive them.

SAVINGS — Many catalog products are priced below list. Since selling direct saves us money, we can pass that savings on to you.

SATISFACTION GUARANTEED — You must be completely satisfied with every item you purchase from DIGITAL. It must be as we describe it, and just what you expect it to be. If a product is unsatisfactory — for any reason — simply return it to us within 10 days for full credit or refund (see page 156). This return policy is in addition to the 90-day warranty against product defects.

SERVICE — Call our direct lines for additional information or specifications. Our specialists are waiting to assist you. Call toll free 8:30 am to 5:00 pm EST 800-258-1710. (New Hampshire residents, call (603) 884-6660.)

We believe that once you try purchasing the Direct Sales Catalog way, these catalog shopping advantages will prove themselves to you.

For details on how to place your orders, check the How to Order section beginning on page 154.

NEW in this edition

Computer Systems — Complete PDP-11/V03 floppy disk based microcomputer system.

Microcomputers — LSI-11/2, the second generation of the successful LSI-11 microcomputer family.

Terminals — Excitingly low prices on DECwriter terminals.

Disk Drives — Catalog availability of add-on RK05 disks for expansion of existing RK8 and RK11 installations.

Documentation — A selection of DIGITAL's most popular technical manuals and handbooks.

System Enclosures & Cabinets — More logic expansion boxes and system cabinetry. And more . . .

We've carried forward into this edition of the Direct Sales Catalog several of the new items in our Spring 1978 Catalog Supplement. Items such as:

DECstation — A PDP-8 system you've probably never seen before.

Chipkits — LSI-11 design aids for the custom interface builder.

DECscope 4-pack — A special low price on the purchase of four (4) VT52 DECscopes.

We look forward to doing business with you and, as always, are standing by to process your orders quickly and efficiently.

DIRECT SALES CATALOG

The Direct Sales Catalog is: TERMINALS

Sophisticated computer systems demand reliable terminals. That's why DIGITAL manufactures its own. In fact DIGITAL manufacturing facilities are dedicated solely to the production of interactive terminals. What does this mean to you? Ultra reliable products with MTBF's (Mean Time Between Failure) measured in thousands of hours and millions of trouble-free data transactions. Video terminals, graphic terminals, hardcopy terminals, high speed printer terminals are all made to the same exacting quality standards — quality standards that the industry equates with the name DIGITAL.

LA35 & LA36 DECWRITER II

PRINTER TERMINALS 30 CPS

Priced from $1520

LA35

LA36

Priced from $1595

- *Office-environment quietness.*
- *True 30-character-per-second printing throughput.*
- *Full 132-character line length.*
- *10 characters per inch standard. 16.5 optional. 6 lines per inch vertically.*
- *Upper and lower case printing plus numerics and symbols.*
- *ANSI typewriter keyboard on LA36. APL characters optional.*
- *Multipart forms up to 6 high.*
- *Form width variable from 3 to 14⅞".*
- *ASCII 128 character set (and keyboard on LA36).*
- *Numeric keypad, LA36 only.*
- *Asynchronous data transmission at switch selectable baud rates of 300, 150, and 110.*
- *20 mA current loop interface or EIA RS-232C.*
- *Full-duplex or half-duplex with local copy option.*
- *Buffer memory option for dynamic editing with store and forward capability on LA36.*

DECwriter II is a fast, small, quiet 300-baud interactive hard copy terminal. It functions as an economical, remote or local hard copy input/output device to a host computer. Priced competitively with comparable printer terminals, DECwriter II features improved throughput, reliability, print quality, and forms handling versatility. It is a true 30 characters per second printer — yet is so quiet that it can readily be used in an office environment. Measured exterior noise level is no more than 65 dB at 30 feet.

Two types of terminals are offered here: The LA36 Series which is a full send-receive terminal, and the LA35 Series which is a receive-only printer. Both terminals can accept multipart forms from 3 to 14⅞" wide.

An exciting new option that provides Buffered Send-Receive capabilities for LA36 is now available, see box on page 11. It provides the user local storage of data for editing before transmission, batching for highest-speed (300 baud) "burst" transmission, and storage for later transmission when line charges are lowest. This option can be added to all existing LA36 terminals.

DECwriter II achieves its 30 cps throughput by having a 16-character buffer storage receiving incoming data. This buffer stores characters during printing, carriage return, and line feed. When there is more than one character in the buffer, the terminal automatically switches to a 60 cps catch-up printing operation until all characters are printed. Thus DECwriter II makes full use of a 300-baud communications line.

The full ASCII complement of 96 upper and lower case letters, numbers, and symbol characters are printed by DECwriter II. However, the reduced 64-character ASCII subset can be accommodated by setting the CAPS LOCK key. This reduced set maps the lower case keyboard characters into their upper case equivalents so that only upper case characters are transmitted. The printout format is a full 132 character positions with 6-lines-per-inch vertical spacing. Horizontal character spacing is 10 per inch standard with option of having closer spacing of 16.5 per inch.

LA35 & LA36 DECWRITER II

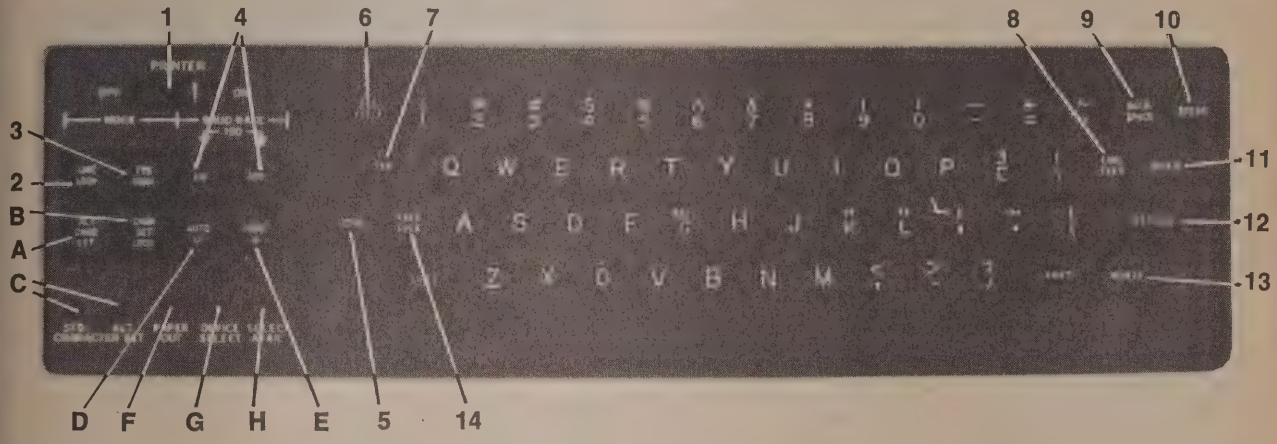
TYPEWRITER KEYBOARD — LA36

The keyboard of the LA36 Series is built to a universally accepted standard — the office typewriter (ANSI standard). The key layout, stroke, and touch are familiar to any typist. This means that training and familiarization time can be kept to a minimum, and maximum throughput can be achieved quickly. DECwriter II's keyboard is user-proven, having undergone vigorous testing since the fall of 1973.

Three-key rollover protection is incorporated in the design to eliminate multiple-keying errors. Up to three keys can be depressed at one time but the input will be correct if one of the first two keys struck is released before the third.

Switches adjacent to the keyboard allow the operator to power-up, select transmission rate, choose on-line or local operation, half- or full-duplex operation, and to activate optional features. In the local mode DECwriter II functions as a typewriting device allowing operators to add information to the printout.

An optional 14-key numeric keypad is available for those applications that require extensive numeric data entry. The keypad fits in the keyboard bezel to the right of the main keys.



STANDARD FEATURES — LA36 KEYBOARD

1. POWER-ON/OFF — Turns power on or off.
2. LINE/LOC — Connects the LA36 to the host computer (LINE) or, when depressed in the locked position, to itself (LOCAL).
3. FDX/HDX — Selects either full-duplex or half-duplex (when depressed, in the locked position) with local copy operation.
4. BAUD RATE — Selects clock frequency for transmission/reception at one of the following rates:
   300 (normal) 30 characters/second at 10 bits/character
   150 15 characters/second at 10 bits/character
   110 10 characters/second at 11 bits/character
   For 300 BAUD operation:
   Depress and lock only the key labeled 300
   For 110 BAUD operation:
   Depress and lock only the key labeled 110
   For 150 BAUD operation:
   Depress and lock both keys
5. CTRL — In combination with other keys, causes some "control" (nonprinting) action to take place at the host computer. See Table I.
6. ESC(SEL) — Directs the host computer to treat the next received character as a command.
7. TAB — Directs the host computer to advance the print head the programmed number of spaces.
8. LINE FEED — Sends a line feed command in the data sent to the host computer.
9. BACK SPACE — Sends a BS code to the host computer. Moves the printed head one space to left in half-duplex mode.
10. BREAK — Causes reception of data from the host computer to be interrupted (in half-duplex operation).
11. DELETE — Transmits a DELETE code to host computer.
12. RETURN — Sends a carriage return command in the data sent to the host computer.
13. REPEAT — Repeats to the host computer any character being pressed simultaneously.
14. CAPS LOCK — Generates all upper-case characters plus numerals and eliminates lower-case alphas.

OPTIONAL FEATURES — LA36 KEYBOARD

A. ALT CHAR SET — When depressed and in the locked position selects the Alternate Character Set to be printed.

B. CHAR SET LOCK — When depressed in the locked position determines whether the operator or a remote device controls changes between ASCII and APL or other alternate character sets.

C. STD/ALT CHARACTER SET — These Light Emitting Diodes light to signify which character set has been selected. Either the one above STD or ALT will be illuminated.

D. AUTO LF — When depressed in the locked position AUTO LF inserts a local line feed after each carriage return whether typed locally or received from the host.

E. HERE IS — When depressed will send up to a 20 character message down the communication line.

F. PAPER OUT — Will light when the terminal is out of paper.

G. DEVICE SELECT — Will light when the terminal has been remotely selected to transmit. SELECT AVAIL will then be extinguished.

H. SELECT AVAIL — Will light when the terminal is available for remote selection.

digital

DIRECT SALES CATALOG

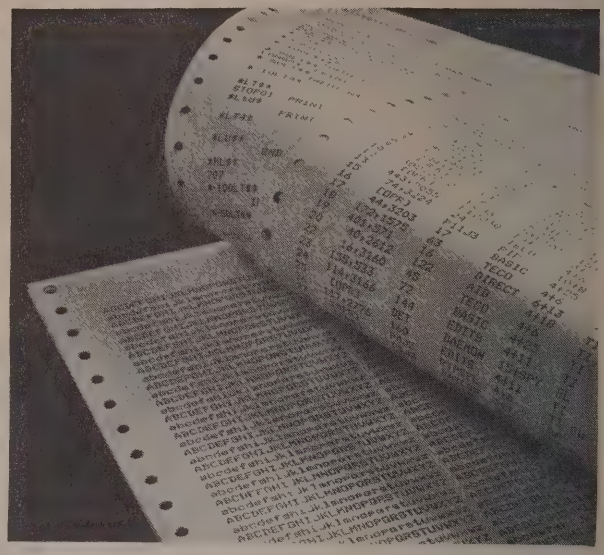
LA35 & LA36 DECWRITER II

Print Quality

The secret of DECwriter II's print quality is the design of the printhead. It comprises a 7 by 7 dot matrix which produces a far more legible image than the more conventional 5 by 5 matrix. The printhead wires are permanently lubricated and their curvature and support mechanism has been developed by computer simulation. The mechanism is protected by a massive heat sink. The results? Long life with minimal wear.

To ensure uniform density of the character impressions the motion of the printhead wires is controlled from a constant-current source. For absolute accuracy in both horizontal and vertical dot placement the printhead has a ruby sapphire bearing guide at its tip. This jewel bearing is highly resistant to wear ensuring that each wire always strikes the ribbon and paper at the proper location.

Dye-based ribbons per a DEC specification are used instead of carbon-based. These latter ribbons tend to unduly wear printhead wires which leads to poor character legibility. The ribbon feed system is also designed to eliminate smudging of the impressions. The ribbon is advanced only during carriage motion and is in fact directly driven by this motion. This eliminates a separate ribbon advance circuit and associated actuators. DECwriter II's mechanical ribbon rewind mechanism is also particularly trouble free.



DECwriter II prints easily read upper and lower case characters formed in a 7 by 7 dot matrix positioned precisely by a proprietary new carriage system.

Paper Handling

Because DECwriter II has a full 132-column printing capability and can accept form widths all the way from 3 to 14⅞″ — including 9½″ teleprinter forms — the same forms can be used on both line printers and keyboard printers, reducing inventory costs and headaches.

To accept different forms widths the right tractor moves horizontally. The left tractor can be adjusted to permit precise horizontal alignment on preprinted forms.

Six-part forms can easily be handled because of the tractor system for forms feeding. This system is the same as that found on high speed computer output line printers. Because a stepping motor drives the two pin-feed tractors the tractors reliably initialize on an integral forms line. There are always six pins engaging the paper, thus multiple forms are pulled with uniform tension without interleaf slippage and misregistration.

As an aid to the terminal operator the top of DECwriter II is beveled and the ribbon is positioned away from the paper. The printed characters are therefore easily visible. The printhead, too, moves four spaces to the right whenever there is a pause in printing lasting over 1,300 millisecs. The printhead returns to its operating position within 100 millisecs once printing commences. Other operator aids are detailed in the Options section.

Interface: Software

The DECwriter II will function with software handlers written for teletypewriters and other hard-copy terminals — in general. But it is important to review the exact interactive relationships in matching DECwriter II to the particular application. The following considerations are key to successful utilization:

1. **Transmission Mode** — Full-duplex or Half-duplex operation is possible. In the full-duplex mode the keyboard is logically separated from the printer. In half-duplex mode, the printer will copy all printable characters typed on the keyboard.
2. **Word Length** — 7-bit data words plus even or no parity. All outgoing characters are transmitted using even-parity protocol (a word is judged correct if it contains an even number of ones). Jumpers can be moved to provide no parity with parity bit marking, or parity bit spacing, and, alternately, odd parity protocol.
3. **Variable Baud Rates** — By switch selection on the terminal 110, 150, or 300 baud transmission rates are possible. Word length varies with the baud rate. At 110 baud, word length is 11 bits while at 150, and 300 it is 10 bits.
4. **Print Format** — Both upper case and lower case printout is possible. The CAPS LOCK feature also allows upper case only printout. Where forms fill-in is frequently called for options such as tab control and forms feed-length selection should be specified. Also if the terminal will be used in programming applications where APL is used, the optional dual ANSI/APL character set option should be specified. Further consideration should be given to the benefits of the compressed font option. This changes the horizontal spacing of the characters from 10 per inch to 16.5 characters per inch allowing the full 132 characters to be printed in only 8″ of space. Thus the printout can be on 8½″ wide paper for easy filing in standard cabinets.

digital DIRECT SALES CATALOG

LA35 & LA36 DECWRITER II

Interface: Software (Cont'd)

5. **Command Responses** — How DECwriter II reacts to commands from the host computer is an important consideration. Instructions such as line feed or carriage return cause movement of the printhead. Table II spells out the standard and optional codes in use. The host computer, too, must be programmed to respond to control commands from the keyboard. These are generated by striking the CTRL key followed by another key, see Table I.

6. **Optional Operational Controls** — Other interactive controls are optionally available. For example, a selective addressing option allows a transmitting device such as the host computer or another master terminal to select a single terminal, or a group of terminals, or all terminals on the same communications line to receive the transmitted data. A terminal, too, may identify itself to the network by application of the answerback option. Here on receipt of an ENQ or enquiry code the terminal transmits a 20 character identity. This same message is transmitted by the operator pressing the HERE IS key. An automatic line feed option allows the terminal to transmit both a carriage return signal and a line feed signal each time the carriage return button is depressed. And an automatic paper-out signal can be optionally generated.

7. **Buffered Send Receive** — A 4K, 8K, 12K, or 16K local memory and control option has recently been introduced for LA36. This buffer allows data to be stored prior to transmission.

TABLE I — CONTROL SIGNALS FROM KEYBOARD

(CTRL) (C)	Signifies that the end of text has been reached.
(CTRL) (B)	Signifies that all characters to follow are to be treated as text.
(CTRL) (BEL)	Signifies an alarm condition.
(CTRL) (Space, Y, Z, X, P, Q, S, F, U, V)	Special commands associated with Buffered Send-Receive Option.

TABLE II — COMMAND CODES FROM HOST COMPUTER

Character(s) and Octal Code(s)	Action Taken
BEL (007)	Sounds alarm bell.
BS (010)	Moves printhead back one space to left.
SI (017) and SO (016)	Part of ANSI/APL selection option. When code SI is received, character set to be printed shifts from ANSI to optional APL standard. SO code restores operation to normal.
LF (012)	Advances the paper upwards one line.
CR (015)	Moves printhead to left margin. Can also trigger an automatic LF command as an option.
SP (040)	Space Bar. Moves printhead one position to the right.
(041 to 176)	Prints all printable characters including numerics, punctuation symbols, upper case, and lower case alphas. Moves printhead one space to the right.
NUL (000) and DEL (177)	The terminal does not respond to these characters which are often used with slower electro-mechanical devices as fill or pad characters.
ESC 1 (033 061)	Part of the forms control option. This code sets a horizontal tab in any or all of the 132 character columns. Fill characters, or a time delay, required from host computer.
ESC 2 (033 062)	This code clears all horizontal tabs.
ESC 3 (033 063)	Part of forms control option. This code sets up to 84 vertical tabs. Host computer must provide time delay or fill characters.
ESC 4 (033 064)	This code clears all vertical tabs.
ENQ (005)	Activates answerback option resulting in transmission from terminal of up to 20 character terminal identity.
FF (014)	Part of form feed option. This code causes form to be advanced to top of next form.

Interface: Hardware

The keyboard version LA36 is normally configured for full-duplex operation. It can either be passive with the host computer providing the current source or, by a local wiring change, become an active device. In the half-duplex mode, transmission can take place only in one direction at a time. In this mode DECwriter II can also be either active or passive.

An optional 20 mA current loop or EIA Standard RS232C interface is available. Physically the EIA interface is a customer installed cable and module. The EIA interface can be provided with modem control which includes auto answer, timed disconnect, and half/full duplex logic to provide both the LA35 and LA36 with half-duplex capability.

An optional modem is also available. This modem is comparable to a BELL 103J modem. It provides full duplex, asynchronous communication at rates up to 300 baud. It has originate and auto-answer capability. It includes an FCC-approved DAA. And it incorporates a self-test switch, mounted inside the cabinet, for local or remote diagnosis.

An integral acoustic coupler kit is an option. Two muffs are mounted on the rear of the terminal and accept a standard telephone handset.

Included are a carrier detector light and a new terminal cover to contain the muffs. The coupler can transmit full- or half-duplex serial, binary, asynchronous data at rates from 0 to 303 bits per second.

digital DIRECT SALES CATALOG

LA35 & LA36 DECWRITER II

OPTIONS DESCRIPTION

The options described here must be installed by the user if ordered by individual option catalog number. Note that Models LA35-CE, -CJ and LA36-CE, -CJ are equipped with certain pre-installed options. See p. 11 for details.

Basic Mounting Kit for Options

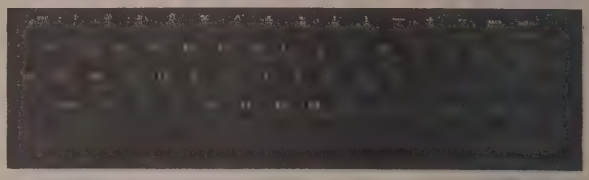
LAXX-LB

This option provides the expansion logic and 6 mounting spaces to mount the DECwriter II communications and forms-handling options. This option also contains logic to automatically sense and activate new options as they are added to the DECwriter II.

Character Set Options

LAXX-PK

This dual character option allows DECwriter II to be used as an ANSI/APL terminal. With this option installed, the DECwriter II has two character sets and selection of the desired set is possible via the receipt of Shift In (SI) and Shift Out (SO) ASCII control codes or via the ALT character set switch on the operator's control panel. The Character Set Lock switch is used to lock-out either manual control or host computer control of character set selection.



Optional APL keyboard.

Paper Handling and Printout Options

LAXX-KV — Forms Feed Option

This option consists of a single-width, double-height module, a cable and a forms-control switch unit. The forms-length switch unit mounts inside the top cover on the printer mechanism side plate. It contains an 11-position switch to select the desired forms length and a reset button which, when depressed, defines the present paper position as top-of-form. The receipt of an FF character (can also be generated from the console panel in half-duplex or local mode) causes the form to be advanced to the next top-of-form.

NOTE: The host computer software must send fill characters or provide time delay to use this option.

LAXX-KY — Form Control Option

This option provides all of the features of the LAXX-KV, plus it provides horizontal and vertical tab capability. The horizontal tab uses ESC 1 to set a tab in any column (132 tabs maximum) and an ESC 2 to clear all horizontal tabs. The vertical tab uses ESC 3 to set up to 84 vertical tabs per form and ESC 4 to clear all vertical tabs.

NOTE: The host computer software must send fill characters or provide time delay to use this option.

LAXX-LZ — Paper Out Sensor

This option alerts the operator to a paper-out or paper-jam condition. An LED on the console panel will illuminate when a paper out has occurred. When using a 20mA interface, printing will stop and data will be discarded. When using the LAXX-KG EIA, interface, the ready line will be dropped and a forced disconnect will occur. Use of EIA with modem control allows the user a choice of actions on paper out. (See LAXX-LG)

LAXX-KJ — Compressed Font Option

This option changes the horizontal spacing from 10 characters per inch to 16.5 characters per inch. This allows 132 columns to be printed in 8″ space. A 40% reduction in paper usage is achieved allowing 132 column reports to be filed in standard file cabinets.

Operator Assist Options

LAXX-KK — 14 Key Numeric Pad Option

Comes with new keyboard bezel and cable.

LAXX-LA — Auto Line-Feed Option

This option allows the operator to depress the auto LF push-button on the operator's control panel and in this state cause the DECwriter II to transmit a carriage return and line-feed character each time the carriage return button is depressed on the main keyboard. With the auto LF button up, the DECwriter II reverts back to normal mode of operation. The option also features, as an installer option, the ability to generate an LF automatically upon receipt of a carriage return code from the host computer.

LAXX-KX — Answerback & Auto Line Feed Option

This option provides all of the features of the LAXX-LA, plus a manual and automatic answerback capability. The answerback option allows transmission of a user-determined terminal identification message of up to 20 characters. This feature is activated upon receipt of an inquiry (ENQ) code or by the operator depressing the HERE IS button on the console. Message generation is accomplished by means of 20 7-bit DIP switches on the option board. These switches are easily changeable to alter the Answerback message.

LAXX-NE — Print Window

The Print Window is a clear plastic cover that mounts over the entire carriage system to provide both noise-free operation and protection of the print head and paper from foreign objects.

LAXX-RG — Column Scale and Pointer

This option is virtually the same as LAXX-LN but does not include the Print Window.

LAXX-LN — Print Window, Scale, Pointer

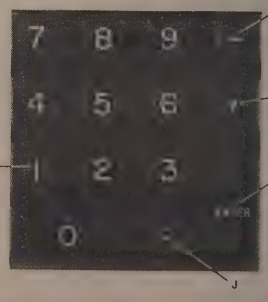
This option consists of the Print Window and three indicators: Column Scale, Line Indicator, and Column Pointer. The Column Scale is a 17.25″ long strip that is marked off in 132 divisions representing the possible column locations. The scale adheres to the bottom lip on the print window. The Line Indicator mounts on the print head and is used to establish two printing locations. One part indicates the baseline of the characters in a particular line. When setting up a form or rolling back to a previously printed line, this indicator is used to exactly align where the next character will print on the line. The other part of this indicator shows where the next character will print with respect to the column position. The Column Pointer is used in conjunction with the Column Scale to indicate the number of the column where the next character will be printed.

Optional Keypad Features for LA36

I 0 thru 9
Numerical keys aid in data input.

J ./ ,/ —
Point, comma and minus sign are essential symbols for numerical data.

K ENTER
This instruction functions like CR and other "input data" signals.



digital DIRECT SALES CATALOG

LA35 & LA36 DECWRITER II

OPTIONS DESCRIPTION (Cont'd)

Communications Options

Cat. No. LAXX-KG — EIA Interface

This option provides an EIA RS232-C interface. A 9-foot cable with 25-pin data-set-type connector is also supplied.

LAXX-LG — EIA Interface & Modem Control

This option provides an EIA RS232-C interface for the DECwriter II. The option includes auto answer, timed disconnect and half/full duplex logic to provide earlier model DECwriters with half-duplex. A 9-foot cable with 25 pin data-set type connector is also supplied with this option. Straps are available on this option to send timed break (230 ms), 3000 ms long space, forced disconnect, or do nothing (stops printing, discards data) on a paper-out condition. Modem controls are also provided on this option for use with the Selective Address option.

LAXX-KW — Selective Address Option

This option allows the capability of operating in a selection control environment when connected to a multipoint Common Carrier Leased Private Line facility or an equivalent customer-provided communication network. It allows a transmitting device (CPU or controlling terminal) to act as a master and select a single terminal, a group of terminals, or all terminals on the same communications line to receive the transmitted data.

Each terminal connected to the line has the capacity of selecting itself as master once the previous master has relinquished the multi-party line.

LAXX-LM — Integral Acoustic Coupler Kit

The option provides coupling to phone lines with hardware mounted completely within the DECwriter. It comprises two muffs which are mounted to the rear of the terminal cover and are capable of accepting standard telephone handsets. Included with the option are a carrier detector light and a new terminal cover to contain the muffs. The coupler can transmit full- or half-duplex serial, binary, asynchronous data at rates from 0 to 303 bits per second. The coupler may also be set to transmit or ignore BREAK. Signals: Serial, binary, asynchronous 0 to 303 baud maximum transmission rate.

Transmit Frequencies:	Mark 1270 ±10Hz
	Space 1070 ±10Hz
Receive Frequencies:	Mark 2225 ±10Hz
	Space 2025 ±10Hz

LAXX-RE — Modem

This option, which is comparable to the BELL 103J modem, consists of modem, cover with switch assembly, test switch, carrier light, interface cabling, and an FCC-approved DAA.

Both the modem and the Data Access Arrangement mount completely inside the LA36 cabinet. In addition, a plug is provided which connects the DAA to a standard telephone jack, so the terminal can be easily moved to any phone location.

LAXX-LH 20 mA Interface

This option adds 20 mA current loop capability to DECwriter II models not so equipped.

BUFFERED SEND RECEIVE

LAXX-NS, -NT, -NU, -NV

The LA36 DECwriter II can be equipped with a solid state buffer option which provides the user local storage of data for batch transmission at rates up to 300 baud. The electronic store and forward capability is an alternative to electromechanical automatic send and receive (ASR) devices using either magnetic or paper tape media. In addition, the electronic buffer's easy-to-use editing capability can minimize communication line charges.

In normal use, savings in line charges will pay for the buffer within four months.

The option consists of one microprocessor-based printed circuit board with an integral power supply and a mounting bracket. The entire assembly is mounted inside the LA36. This option is user installed. The terminal must have an EIA interface for this option.

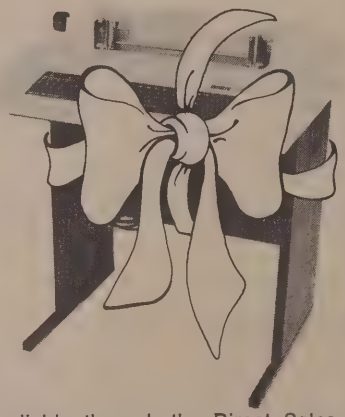
Other features are:

- *Field installable in any DECwriter II.*
- *110, 150, or 300 baud rate transmission.*
- *Available with 4K, 8K, 12K, or 16K memory.*
- *Parity check on each character and parity selection.*
- *Stand-alone power supply.*
- *CONTROL code operation, see Table I.*
- *Line search capability.*
- *Margins selectable for 72, 80 or 132 characters.*
- *X ON, X OFF and restraint control.*

Electrical power for the buffer is provided by its own power supply which is included with the option. The option mounts conveniently within the LA36. Logically the buffer is in series between the LA36 Logic Module and the EIA interface (must be ordered if not present on existing installation).

DECwriter II

WITH THE TRIMMINGS



LA36 Priced from $1825

Now available through the Direct Sales Catalog is a DECwriter II configuration with factory installed options:

- *A 14-Key Numeric Keypad (LA36 only)*
- *Print Window, Column Scale, and Pointer*
- *Paper-out Sensor*
- *Ribbon*
- *Sample Paper*
- *20 mA Current Loop Interface*
- *Includes On-Site Warranty (90 days)*
- *Extra Ribbon*
- *Sample Paper Sheets*

Order LA36-CE or -CJ for keyboard DECwriter II's and LA35-CE or -CJ for Receive-Only Models.

CALL: 800-258-1710 (N.H. Residents 603 - 884-6660) 8:30 am to 5 pm EST.

digital DIRECT SALES CATALOG

LA35 & LA36 DECWRITER II

OPERATIONAL SPECIFICATIONS

Printout

Printing Speed: 30 char/sec throughput, serial asynchronous.

Number of Columns: 132.

Printing Characters: 96 or 64 switch selectable ASCII Character set. APL optional.

Control Characters: 32 ASCII Character set.

Keyboard Characters: 128 or 96 switch selectable. APL optional.

Paper Handling

Tractor feed, 6 engaging pins, movable tractors for 3 to 14⅞″ forms, manual print gap adjustment for 1-6 part forms, vernier vertical and horizontal adjustment for custom preprinted forms.

COMMUNICATIONS

Rates

110 baud 11 bit, 150 and 300 baud 10 bit; switch selectable at keyboard panel.

Modes of Operation

Local or full duplex on-line, switch selectable at keyboard panel.

MECHANICAL SPECIFICATIONS

Color: Off-white top with flat-black base.

Mounting: 1 free-standing unit.

Height: 33.2″ **Depth:** 24.0″

Width: 27.5″ **Weight:** 102 lbs.

Environment

Temperature: 10°C to 40°C (50°F to 104°F) operating. −40°C to 66°C (−40°F to 151°F) non operating.

Humidity: 10% to 90% (relative, noncondensing) operating. 5% to 95% (relative, noncondensing) nonoperating.

Noise: 65 db at 3 feet.

ELECTRICAL SPECIFICATIONS

Input Current: 115V ac (2A) 60 Hz or 230V ac 50 Hz. Power cord included with grounded plug for wall outlets. LA36 and LA35 are UL listed.

Heat Dissipation: 300 W printing; 160 W nonprinting.

SUPPLIES SPECIFICATIONS

Paper

Single-Part: 15-lb. paper minimum; 0.010″ card stock max.

Multi-Part: 2-6 part (no cards except last copy). Max. Thickness: 0.020″. All parts of multi-part forms must be identical in width.

Note: NCR or 3M paper, up to 6-part. Must use ribbon on top copy. First surface impact paper not recommended.

Continuous-feed, fan-fold business forms with 3- or 4-prong margin crimps on both margins (multi-part). Stapled forms are not recommended and may damage tractors and other areas of the machine. Dot or line glue margins acceptable.

Caution: Do not line glue both margins as air will not be able to escape and poor impressions will result.

Type: Impact 7 by 7 dot matrix.

Character Size: 0.70 by 0.100″.

Vertical Spacing: 6 lines/inch.

Horizontal Spacing: 10 char/inch or 16.5 optional.

Carriage Return: 500 msec maximum.

Line Feed: 33 msec.

Slew Speed: 5 inches/second (30 lines/second).

Keyboard (LA36)

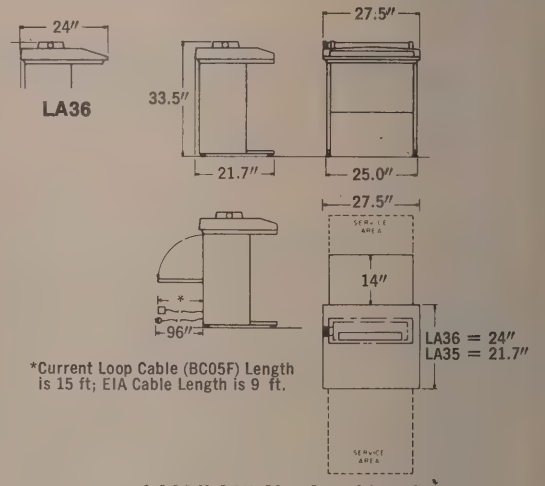
Standard ANSI typewriter-like layout, mechanical contact with four parallel switches of inlaid rolled gold. APL character designations optional.

Parity

No parity, eighth bit marking on transmit; odd or even parity, with or without parity error printout, jumper-selectable.

Interface

Full-duplex passive or active operation (jumper selectable). Optional 20 mA current loop or EIA RS232C.



LA36/LA35 Site Considerations

Ribbon

Digital-specified nylon fabric, spool assembly 0.5″ wide by 40 yards.

LA36 MAINTENANCE MANUAL

A comprehensive manual for the do-it-yourselfer; provides installation, operation, theory, electrical and mechanical servicing information, engineering drawings, and parts breakdown.

SUPPLIES AND ACCESSORIES

Accessories

To complement DECwriter installations, a range of custom-tailored accessories is available either individually or in combination kits as follows:

Work Surface Shelf, LAXX-KC — Attaches to either left or right side of terminal. Dimensions: 24L by 15″W.

Wire Shelf, LAXX-KD — Attaches to back of terminal to collect printer paper. Dimensions: 10½L by 18W by 2″H.

Basket, LAXX-NC — Attaches to back of terminal to collect printer paper. It is deeper than the LAXX-KD wire shelf and holds up to one complete box of single or multipart forms. Dimensions: 12L by 16W by 13″H.

Casters, LAXX-KB — Attaches to back legs of terminals so they can easily be moved.

LS120 DECWRITER III

PRINTER TERMINALS, HIGH SPEED 180 CPS

Standard Features

- *180 cps printing.*
- *110, 300 or 1200 baud operation plus additional, operator-selectable rates of up to 4800 baud.*
- *Full- or half-duplex operation.*
- *X-ON, X-OFF (DC1, DC3) FDX protocol.*
- *ETX/EOT or reverse channel HDX protocol.*
- *RS232C interface.*
- *Paper-out switch.*
- *Switch-selectable automatic line feed.*
- *Selectable automatic new line.*
- *Auto-answer with time out protection.*
- *132-column printing; 10 characters per inch horizontal; 6 lines per inch vertical spacing.*
- *Fine vertical adjustment for forms alignment.*
- *128-character ASCII upper/lower case set.*
- *ANSI keyboard with multi-key rollover.*
- *Prints 6-part forms.*
- *Handles variable width forms (3 through 14⅞"W).*
- *Self-test mode.*
- *Print window.*
- *Adjustable left and right tractors.*
- *Switchable parity selection and parity error detection.*
- *7 by 7 dot matrix printing.*

NEW LOWER PRICE

LS120

Priced from $3072

Optional Features

- *Forms package, including length of form, top and bottom of form, horizontal and vertical tab (relative and absolute), left hand and right hand margin setting and direct positioning.*
- *User programmable 20 character Answerback option, which includes additional space for storage of user defined machine set-up parameters.*
- *APL alternate character set.*
- *Compressed font (16.5 characters per inch).*
- *14-key numeric pad.*
- *300 baud integral acoustic coupler.*
- *Compatibility with DECwriter II standard accessories and supplies.*

The LS120 DECwriter III is a low cost, interactive hard copy serial data communications terminal designed for operation at 1200 baud.

DECwriter III draws upon field-proven sub-assemblies used in other DIGITAL terminals. DECwriter III meets high standards of reliability, ease of maintenance and accuracy of DECwriter II and DECprinter.

A microprocessor-based options controller module provides flexibility in the DECwriter III, making it suitable for a wide range of applications. For example, the terminal can utilize half- and full-duplex as well as echoplex protocols. In addition to the terminal's basic 1200 baud rate, other rates from 110 to 4800 baud can be selected.

Further, DIGITAL offers a number of standard options for the machine, allowing the user to tailor terminals to each specific application.

The DECwriter III is equally at home in both communications and interactive computer console applications. Its 180 cps print speed, combined with its integral 1K character buffer provides highly efficient machine throughput. In addition, the DECwriter III incorporates a "smart" look ahead print capability which automatically returns the print head to the first *printing* position of each successive line. Its quiet operation makes it a suitable addition to any office environment.

Field-proven subassemblies used in both the LA36 DECwriter II and the LA180 DECprinter are incorporated in the DECwriter III. These include a 7 by 7 dot matrix print head, ANSI keyboard, logic circuitry and power circuitry. In addition, the DECwriter III contains a microprocessor-based options controller module for additional forms handling and communications capabilities. This module has been designed to allow for future buffered send/receive capabilities and editing features. The LS120 uses a 128-character upper- and lower-case ASCII character set. Optional character set ROMs enable the user to print non-standard characters.

digital

DIRECT SALES CATALOG

LS120 DECWRITER III

Incoming Buffer Storage

The LS120 incorporates a 1K character FIFO buffer for temporary storage of incoming data. If data is received at a rate faster than DECwriter III can process and print it, the buffer will protect the data stream, against loss. If the buffer becomes full, the terminal can be switched to automatically issue an XOFF (DC3) command to the sending device to stop transmitting data. When the buffer has been emptied, the terminal will issue an XON (DC1) command for resumption of transmission.

Keyboard

The keyboard layout is an ANSI standard typewriter styled keyboard. An optional APL character set option can also be ordered. DECwriter III features a multi-key rollover keyboard, which prevents the operator out-typing the keyboard even at low baud rates. Each key activates a gold-inlaid multi-contact switch capable of generating more than 100 million characters without an error. The keyboard's "CAPS LOCK" key permits the operator to lock the alpha keys in upper case while leaving numerals and special symbols in lower case. Any operator hesitation longer than two seconds moves the print head four spaces to the right. This provides a clear view of the last character printed. Last character visibility can be overridden by the operator. An optional 14-key numeric pad is also available. See LA36, p. 10.

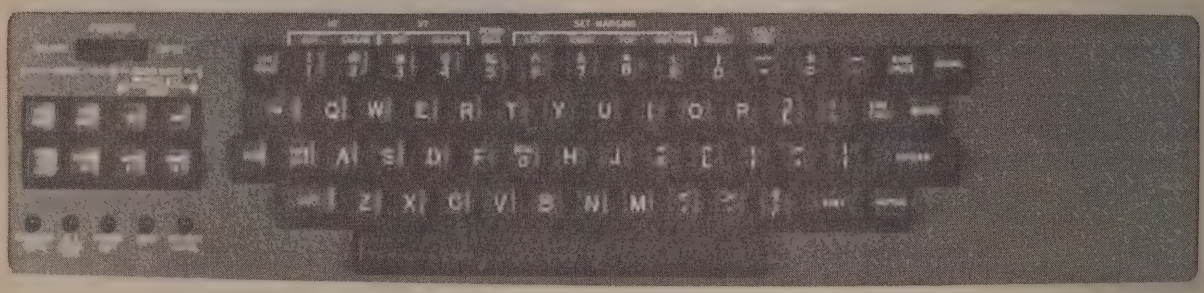

TABLE I — CONTROLS AND INDICATORS

PRINTER ON/OFF	This rocker switch applies or removes ac power to the machine electronics.
LINE/LOC	Connects the terminal to the host computer (LINE). When depressed, a disconnect is issued and the terminal can be used in off-line operations.
HDX/FDX	Selects either full-duplex or half-duplex (when depressed and locked) with local copy operation. (The echoplex feature can be defeated by the user.)
BAUD RATE	The two pushbuttons labeled 110 and 300 determine the line speed at which the DECwriter III sends or receives data. Depressing both buttons selects 1200 baud operation. When both buttons are in the up position, a user pre-determined rate of 2400, 4800 or a split rate of either 75/1200 or 150/1200, can be used.
AUTO LINE FEED	When this pushbutton is in the down position, carriage return and line feed are transmitted whenever the carriage return on the main keyboard is struck. When a carriage return is received from the communications line, a line feed can also be generated.
PRINTER ON INDICATOR	Indicates that ac power is being applied to machine electronics. This light will blink when power is ON, but the terminal is in a NOT READY condition.
ALT CHAR SET INDICATOR	Indicates that the alternate character set is being used, when installed.
PAPER OUT INDICATOR	Indicates that the terminal has run out of paper. This indicator will also come on when the LS120 cover is open.
XMIT INDICATOR	When ON, indicates that the terminal is transmit enabled.
SELECT AVAIL INDICATOR	Reserved for future use.
CHAR SET LOCK	Depression of this button locks the terminal into the selected standard or alternate character set.
STANDBY	Allows keyboard operation in LOCAL mode while holding the communication line.
HERE IS	This button functions only when the answerback option is installed. When pushed, it causes transmission of a user-determined identification message of up to 20 characters.

digital DIRECT SALES CATALOG

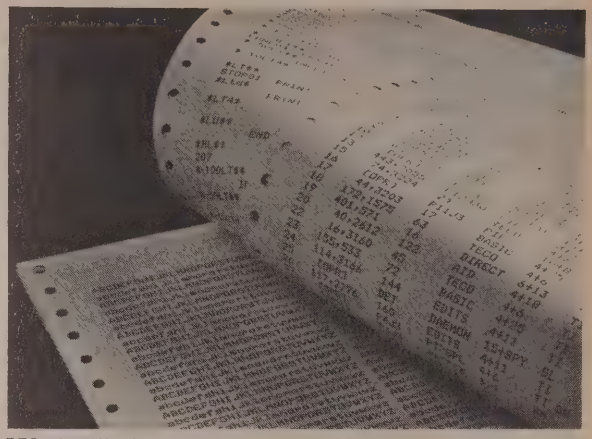
LS120 DECWRITER III

Print Head

DECwriter III's print head is based on the technology used in DIGITAL's DECprinter and DECwriter II. The wires are permanently lubricated for long life and resistance to wear by paper and ribbon. Wire curvature and support mechanism are designed by computer simulation for minimal wear and fatigue. The use of constant current solenoids and a ruby jewel head bearing insures precise character formation and uniform density of character impression. Field experience with over 100,000 units has proved this 7 by 7 dot matrix design to be extremely reliable.

Carriage System

The carriage system smoothly and quietly transports the print head along the horizontal axis, providing accurate character positioning. A precisely adjustable print gap assures clean, clear impressions on a variety of forms sizes of up to six parts. The carriage is controlled by a servo system which assures accurate dot placement. The dc motor operates in the forward direction at up to 18″ per second, and has a maximum carriage return time of 275 milliseconds.



DECwriter III prints easily read upper and lower case characters formed in a 7 by 7 dot matrix positioned precisely by a proprietary new carriage system.

COMMUNICATIONS

The terminal supports half-duplex transmission with both coded character turnaround protocol and reserve channel protocol. For the character turnaround command, the operator may select between ETX or EOT. In addition, the LS120 provides operator-switchable local copy (echoplex) capability for systems where neither the processor nor the modem provides this function.

Many 300 and 1200 baud half- and full-duplex modems are compatible with the LS120. These include the Bell 103 and 202 Series, the Vadic 3400 and the Bell 212A.

The LS120 allows the user a choice of alternatives in the event of a paper out. One condition issues a short break, signaling the host to take appropriate action while holding the communication line. The other condition, for use in unattended operation, issues a DTR disconnect signal.

Parity selection is handled through switches on the options controller module.

If a problem occurs on the system, the operator can utilize a self-test feature in local mode. This initiates a constant ripple pattern, which tells the operator whether the problem is in the terminal or in some other part of the system.

OPTIONS

LAXX-RF — Programmable Answerback Package

The optional answerback package for the DECwriter III features a user programmable 20 character answerback message. The answerback option utilizes a PROM that can be programmed by the user directly from the terminal's keyboard. In addition, separate PROM space is provided for the user to store machine set-up parameters.

LAXX-RB — Read Only Answerback Package

This option performs the same functions as the programmable option except it does not have the capability of blasting PROMS. Therefore, any PROM being used on this option must have been previously blasted on the programmable version.

LAXX-RA — Optional Forms Handling Package

A comprehensive option package for quick and easy handling of single- or multi-part forms can be added to the DECwriter III. Through simple keyboard commands, the operator can set all forms handling parameters. Also, by a direct positioning feature, the print head can be ordered to any horizontal or vertical print position with a single command. Tabbing can be accomplished through either absolute or relative addressing — providing a high degree of flexibility for the user.

LAXX-RC — APL Alternate Character Set

This dual character option allows DECwriter III to be used as an ANSI/APL terminal. With this option installed, the DECwriter III has two character sets and selection of the desired set is possible via receipt of Shift In (SI) and Shift Out (SO) ASCII control codes. Character Set Lock switch, located on the LS120 console panel, is used to either lock-out manual control or host computer control of character set selection.

LAXX-RM — 14 Key Numeric Pad Option

14 Key Numeric Pad Option comes with new keyboard bezel and cable.

LAXX-KJ — Compressed Font Option

This option changes the horizontal spacing from 10 characters per inch to 16.5 characters per inch. This allows 132 columns to be printed in 8″ space. A 40% reduction in paper usage is achieved allowing 132 column reports to be filed in standard file cabinets.

LAXX-LM — Integral Acoustic Coupler Kit

The 300 baud option provides coupling to phone lines with hardware mounted completely within the DECwriter. It comprises two muffs which are mounted to the rear of the terminal cover and are capable of accepting standard telephone handsets. Included with the option are a carrier detector light and a new terminal cover to contain the muffs. The coupler can transmit full- or half-duplex serial, binary, asynchronous data at rates from 0 to 303 bits per second. The coupler may also be set to transmit or ignore BREAK. Signals: Serial, binary, asynchronous 0 to 303 baud maximum transmission rate.

Transmit Freq: Mark 1270 ±10 Hz Space 1070 ±10 Hz

Receive Freq: Mark 2225 ±10 Hz Space 2025 ±10 Hz

LAXX-RN — 20 mA Current Loop Interface

This option provides a 20 mA interface. A 15′ cable is also supplied.

LAXX-RG Column Scale and Pointer

This option consists of three indicators: Column Scale, Line Indicator, and Column Pointer. The Column Scale is a 17.25″ long strip that is marked off in 132 divisions representing the possible column locations. The scale adheres to the bottom lip of the print window. The Line Indicator mounts on the print head and is used to establish two printing locations. One part indicates the baseline of the characters in a particular line. When setting up a form or rolling back to a previously printed line, this indicator is used to exactly align where the next character will print with respect to the column position. The Column Pointer is used in conjunction with the Column Scale to indicate the number of the column where the next character will be printed.

Keyboard Characters: 128 or 96 switch selectable. APL optional.

Paper Handling

Tractor feed, 6 engaging pins, movable tractors for 3 to 14⅞″ forms, manual print gap adjustment for 1-6 part forms, vernier vertical and horizontal adjustment for custom preprinted forms.

Type: Impact 7 by 7 dot matrix.

Character Size: 0.75 by 0.100″

Vertical Spacing: 6 lines/inch.

Horizontal Spacing: 10 char/inch or 16.5 char/inch optional.

Carriage Return: 275 msec maximum.

Slew Speed: 7½ inches/second (45 lines/second).

Keyboard

Standard ANSI typewriter-like layout, mechanical contact with four parallel switches of inlaid rolled gold. APL character designations optional.

COMMUNICATIONS

Rates

110 baud, 11 bit; 300 baud and higher, 10 bits. Four switch selectable rates from console panel: 110, 300, and 1200 are standard user-determined. Fourth rate of 2400, 4800, or a split rate of either 75/1200 or 150/1200, can be used.

Interface

EIA RS232C. Supplied with 9 foot cable and terminated in a standard 25 pin EIA connector. An optional 20 mA current loop interface is also available.

Modes of Operation

Full-duplex, half-duplex, and echoplex modes on-line; or LOCAL switch selectable at keyboard panel. SWITCH SELECTABLE STANDBY MODE places LS120 keyboard into a LOCAL mode while the printer remains ON-LINE.

Parity: Input and output parity ODD, EVEN, and NO parity, bit 8 marking, or NO parity with bit 8 spacing are switchable choices. An output character with improper parity will force a substitute character to be printed.

MECHANICAL SPECIFICATIONS

Color: Off-white top with flat-black base.

Mounting: 1 free-standing unit.

Height: 33.5″

Width: 27.5″

Depth: 24″

Weight: 107 lbs.

Environment

Temp: 10°C to 40°C (50°F to 104°F) operating.
−40°C to 66°C (−40°F to 151°F) nonoperating.

Humidity: 10% to 90% (relative, noncondensing) operating.
5% to 95% (relative, noncondensing) nonoperat.

Noise: 65 dB printing at 3 feet.

ELECTRICAL SPECIFICATIONS

90-132V ac or 180-264V ac, user-selectable; 50 or 60 Hz ±1 Hz. Included w/grounded plug for wall outlets. UL listed.

Heat Dissipation:
400W printing; 100W nonprinting.

SUPPLIES SPECIFICATIONS

Paper

Single-Part: 15 lb. paper min; 0.010″ card stock max.

Multi-Part: 2-6 part (no cards except last copy). Max. thickness 0.020″.

All parts of multi-part forms must be identical in width.

Note

NCR or 3M paper, up to 6-part. Must use ribbon on top copy. First surface impact paper not recommended.

Continuous-feed, fan-fold business forms with 3- or 4-prong margin crimps on both margins (multi-part). Stapled forms are not recommended and may damage tractors and other areas of the machine. Dot or line glue margins acceptable.

Caution

Do not line glue both margins as air will not be able to escape and poor impressions will result.

Ribbon

Digital-specified nylon fabric, spool assembly 0.5″W by 60 yards. Supply Item #36-12153-01

SUPPLIES AND ACCESSORIES

Accessories

To complement DECwriter III installations, a range of custom tailored accessories are available either individually or in combination kits as follows:

Work Surface Shelf, LAXX-KC — Attaches to either left or right side of terminal. Dimensions: 24L by 15″W.

Wire Shelf, LAXX-KD — Attaches to back of terminal to collect printer paper. Dimensions: 10½L by 10W by 2″H.

Basket, LAXX-NC — Attaches to back of terminal to collect printer paper. It is deeper than the LAXX-KD wire shelf and holds up to one complete box of single or multi-part forms. Dimensions: 12L by 16W by 13″H.

Casters, LAXX-KB — Attaches to back legs of terminals so they can easily be moved.

Cat. No.	Description	Cat.	Cash	Shipping Weight

LA180 DECPRINTER I

HIGH SPEED PRINTER 180 CPS

Lowest Price EVER

Features:

- *180 characters per second.*
- *Parallel interface.*
- *Accommodates 6-part form (0.20 max. thickness).*
- *Handles variable-width forms, 3 through 14⅞"W.*
- *132-column print; 10-characters-per-inch horizontal spacing, 16.5-per-inch optional.*
- *6-lines-per-inch vertical spacing.*
- *128-character ASCII upper/lower case set with control codes and symbols.*
- *7 by 7 dot matrix.*
- *Backspace capability.*
- *Quiet operation.*
- *Excellent character readability.*
- *Fine vertical adjustment for accurate forms placement.*
- *Paper-out switch.*
- *Paper-out override.*
- *Switch-selectable forms length (11 lengths).*
- *Drives 100' cable.*
- *Self test capability.*

Priced from $2688

DECprinter

High-speed line printer **LA180** has a handsome styling to blend in with office or computer room decor.

The LA180 DECprinter I is a 180-character-per-second, 132-column hard-copy printer. Utilizing a 7 by 7 dot matrix printing technique and a field-proven printhead, the LA180 provides highly legible and reliable printing of the full 128-character ASCII upper and lower case set. Each LA180 is equipped with a standard parallel interface; however, the unit may also be utilized as a serial device by the addition of one of the optional serial line interface kits.

Forms flexibility is provided by the LA180's ability to accommodate up to six-part forms and handles variable width forms from 3 to 14⅞" wide. Forms length is switch settable, see figure, in eleven lengths, from one line to 14", with fine vertical tractor release adjustment for precise location of printing.

Paper feed is tractor-driven by a stepping motor. The tractor design provides four pin paper engagement of the form on a flat bed, ensuring control and positive feeding of multi-part forms. A paper-out sensor and switch is provided as a standard feature.

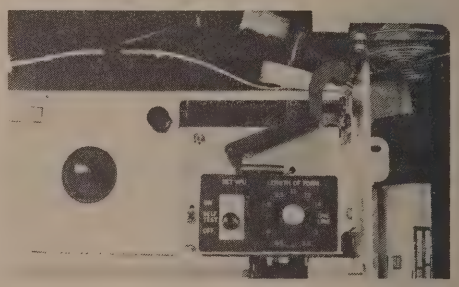

TABLE I — OPERATOR CONTROLS

POWER ON-OFF	Applies and removes ac power to entire machine.
ON-LINE/OFF-LINE	Enables or disables communications.
HEAD OF FORM	Feeds form to the next top-of-form or single-line, if forms switch is set in single-line position and ON-LINE/OFF-LINE switch is in OFF-LINE position. If the paper-out indicator is set, printing can be continued to the next top-of-form by pressing the Head-of-Form button for each line or holding button in until Head-of-Form is reached.
LENGTH OF FORM (ROTARY SWITCH)	Selects any of 11 form lengths.
SET VFU	Used in conjunction with the Length-of-Form switch to reset forms length.
SELF TEST	Will run a ripple test pattern locally if set in test position with machine in on-line mode.
FORMS THICKNESS ADJUSTMENT	Located on right side of printhead carriage; selects proper gap for 1-through-6-part form. Approximately 1 click for each part.
RIGHT AND LEFT TRACTOR ADJUSTMENT	Thumb screw may be loosened to allow tractor movement for various form widths.
FINE VERTICAL TRACTOR RELEASE	Line-feed knob may be depressed inward and rotated in the appropriate direction for precise location of printing with respect to vertical zones.

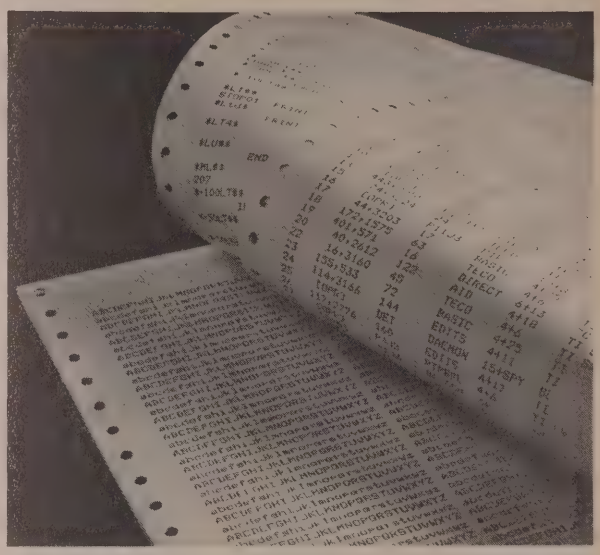
LA180 DECPRINTER I

Print Quality

The secret of LA180's print quality, see figure, is the design of the printhead. It comprises a 7 by 7 dot matrix which produces a far more legible image than the more conventional 5 by 5 matrix. The printhead wires are permanently lubricated and their curvature and support mechanism has been developed by computer simulation. The mechanism is protected by a massive heat sink. The results? Long life and minimal wear by paper or ribbon.

To ensure uniform density of the character impressions, the motion of the printhead wires is controlled from a constant-current source. For absolute accuracy in both horizontal and vertical dot placement, the printhead has a ruby sapphire bearing guide at its tip. This jewel bearing is highly resistant to wear, ensuring that each wire always strikes the ribbon and paper at the proper location. LA180's printhead has a rated life of 100 million characters.

Dye-based ribbons per a DIGITAL specification are used instead of carbon-based. These latter ribbons tend to unduly wear printhead wires which leads to poor character legibility. The ribbon feed system is also designed to eliminate smudging the impressions. The ribbon is advanced only during carriage motion and is in fact directly driven by this motion. This eliminates a separate ribbon advance circuit and associated actuators.



DECprinter I prints easily read upper and lower case characters formed in a 7 by 7 dot matrix positioned precisely by a proprietary new carriage system.

Paper Handling

Because DECprinter I has a full 132-column printing capability and can accept form widths all the way from 3 to 14⅞" — even 9½" teleprinter forms — the same forms can be used on both line printers and keyboard printers.

Six-part forms can easily be handled because of the tractor system for forms feeding. A stepping motor drives two pin-feed tractors. Thus the tractors reliably initialize on an integral forms line. There are always six pins engaging the paper; therefore, multiple forms are pulled with uniform tension without interleaf slippage and misregistration.

To accept different forms widths, the right tractor moves horizontally. The left tractor can be adjusted to permit precise horizontal alignment on pre-printed forms.

Character Set and Code

The full, 96-character, upper- and lower-case set is standard with the LA180. Data is interpreted in a read-only memory (ROM). Changing the ROM enables the user to print non-standard characters. The standard ASCII set, shown in Table II, consists of 10 numerics, 26 upper-case alphas, 26 lower-case alphas, and 34 special characters, including DELETE, a nonprinting, nonspacing control code. The total character and control code count is 128.

As an aid to the terminal operator, the top of LA180 is beveled and the ribbon is positioned away from the paper. The printed characters are therefore easily visible. The printhead, too, moves four spaces to the right whenever there is a pause in printing lasting over 1300 milliseconds. The printhead returns to its operating position within 100 milliseconds.

A compressed font option is available. This option changes the horizontal spacing from 10 characters per inch to 16.5 characters per inch. This allows 132 columns to be printed in 8" space. A 40% reduction in paper usage is achieved allowing 132-column reports to be filed in standard file cabinets. This option, once installed, must be removed if 132-column printing is again required.

TABLE II — COMMAND CODES FROM HOST COMPUTER

Character(s) and Octal Code(s)	Action
BEL (007)	Sounds audible tone. A separate tone is sounded for each of up to eight BEL codes in succession.
BS (010)	Moves printhead one space to left.
LF (012)	Prints content of line buffer, returns printhead to left margin, and advances paper one line.
FF (014)	Advances paper to top of next form (FORM FEED).
CR (015)	Moves printhead to left margin.
SP (040)	Stores "space character" in memory.
(041 to 177)	All printable characters. Received and stored in memory prior to printing.
DEL (177)	Clears memory.

?GOT A QUESTION?

digital DIRECT SALES CATALOG

LA180 DECPRINTER I

Microprogram Control

Functions once performed by printers under hardware control are handled in the LA180 under the control of a 512-instruction microprogram. These instructions are divided into routines, each dedicated to a specific machine function. Microprogram control (MPC) initiates a machine function, senses performance of the function, and, based on that performance, determines which routine is to be performed next. Because the LA180 allows the user to monitor machine functions and operator controls, he can design his software to modify specific routines and to change the printer's responses as desired to meet changing operational requirements.

Control Logic

Eight-bit characters reach the LA180 from the user's interface and are processed through the single-character buffer under MPC, loading the character-buffer RAM with a line of data. From the RAM, characters are presented on a FIFO basis to the character-generator ROM, which generates the firing matrix through which the print head forms the printable characters. The ROM also contains decoding information for the nonprintable command characters.

The carriage servo and printhead subsystems are activated under MPC to move the printhead through the character cell and print the commanded dots in each of the seven rows. A CR (carriage return) character causes the MPC to move the printhead to the left margin. A BS (back space) character causes the MPC to move the printhead one column to the left. An LF (line feed) character causes the MPC to activate the stepper motor drive and advance the paper one line. An FF (form feed) character advances the paper to the top of the next form.

DECprinter is shipped with no parity. The user can select even parity or odd parity, with parity error printout, by changing jumpers.

Interfacing

LA180 is generally connected via a local parallel interface to the host computer. Buffered serial interfaces (LAXX-NW for EIA RS232C and LAXX-NX for 20 mA current loop interconnection) are optionally available. They mount directly into LA180 and come complete with interface cabling. The standard parallel interface requires a BC11S-XX cable that plugs into a 40-pin Berg connector on the LA180 logic module. (Interface cable not supplied with terminal.) The cable can be any length up to 100 feet. The interface pin assignments for the host computer are shown in Table III. The diagram associated with Table III shows the recommended drivers and receivers for maximum noise rejection.

TABLE III — INTERFACE CONNECTOR PIN ASSIGNMENTS

Pin No.	Signal	Pin No.	Signal

LA180 DECPRINTER I

SUPPLIES SPECIFICATIONS

Paper

Single-Part: 15-lb. paper min.; 0.010″ card stock max.

Multi-Part:
2-6 part (no cards except last copy). Max. thick. 0.020″.
All parts of multi-part must be identical in width.

Note
NCR or 3M paper, up to 6-part, must use ribbon on top copy. First surface impact paper not recommended.

Ribbon

Digital-specified nylon fabric, spool assembly 0.5″ wide by 60 yards.

Continuous-feed, fan-fold business forms with 3- or 4-prong margin crimps on both margins (multi-part). Stapled forms are not recommended and may damage tractors and other areas of the machine. Dot or line glue margins acceptable.

Caution
Do not line glue both margins as air will not be able to escape and poor impressions will result.

digital DIRECT SALES CATALOG

PAPER TAPE READER ACOUSTIC COUPLER

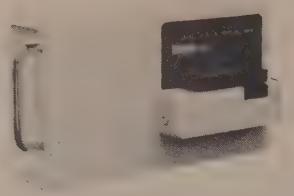
SERIAL PAPER TAPE READER — PRS01

The PRS01 is a small, portable paper tape reader that connects into the serial line of a system console or terminal. The reader provides a convenient and inexpensive method of loading paper tapes using the keyboard device codes of the terminal. It is designed primarily for loading maintenance and diagnostic programs. Because the reader produces a 20 mA serial asynchronous signal, it can be interconnected to a console device or terminal, or to any 20 mA current loop input if no console device is available.

A switch on the reader permits selection of either the console keyboard or the PRS01 as the computer input device. This lets the user switch back and forth between devices without having to disconnect the reader once it is installed. Operation is continuous with start and stop functions controlled by a front panel switch. Outside of this, the reader is similar in operation to the low-speed reader on an ASR teleprinter.

The PRS01 reads 8-level tapes with in-line feed hole. Two versions of the reader are available so that transfer rates of 300 baud or 2400 baud can be used. 115V ac or 230V ac models can be ordered, see table.

The entire reader, including a self-contained power supply, is housed in a small 2-piece plastic case. The back cover is removable for easy access to all sub-assemblies which are mounted inside the front cover.



PRS01

OPERATIONAL SPECIFICATIONS

Feed Hole: In-line.

Tape Level: 8-level.

Transmission Rates: PRS01-AA, PRS01-AB — 2400 baud (approx. 120 char/sec.).

PRS01-BA, PRS01-BB — 300 baud (approx. 22 char/sec.).

Interface: 20 mA current loop, passive, with Mate-N-Lok connector (12-09378-01).

Data: Data is in the form of a serial pulse string. Each character time consists of one "start" bit, eight "data" bits, and one "stop" bit. The "stop" bit (or "1") is current flowing.

System Connections

The PRS01 reader can easily be connected to computer systems with or without terminals. If the computer does not have a terminal, an adapter cable is normally used to connect the reader cables to the computer's terminal interface. Because the type of adapter cable needed depends on which computer terminal interface is used, it may have to be purchased separately.

If the computer has a terminal, then the standard interface cable supplied with the reader is used to interconnect the components. This interface cable uses a "Y" connection so that it can be inserted between the terminal and its interface.

ELECTRICAL SPECIFICATIONS

Power Requirements: PRS01-AA, PRS01-BA — 1.0A @ 117V ac (±10%), 50/60 Hz

PRS01-AB, PRS01-BB — 0.5A @ 230V ac (±10%), 50 Hz

MECHANICAL SPECIFICATIONS

Operating Temperature: 15°C to 32°C (59°F to 90°F).

Humidity: 20% to 80% (noncondensing).

Dimensions: 12W by 7½H by 5¼"D.

Weight: 6½ lbs.

Cat. No.	Baud Rate	Power Input	List	Cat.	Cash	Shipping Weight
B-**PRS01-AA***	2400	115V ac 60 Hz	**$750**	**$713**	**$683**	9 lbs.
B-**PRS01-AB***	2400	230V ac 50 Hz	**750**	**713**	**683**	9 lbs.
B-**PRS01-BA***	300	115V ac 60 Hz	**750**	**713**	**683**	9 lbs.
B-**PRS01-BB***	300	230V ac 50 Hz	**750**	**713**	**683**	9 lbs.

*Includes "Y" cable 10' long, male and female loose Mate-N-Lok connectors for computer and terminal.

ACOUSTIC COUPLER — DF01-A

DF01-A Acoustic Coupler can be used to connect DIGITAL and other terminals to remote computing systems via ordinary telephone sets and public switched telephone network.

Both 20 mA current loop and EIA RS232C interfaces are standard in the DF01-A.

Through slide switches, the user may choose either full- or half-duplex operation.

"Sound-seal" cushions on the DF01-A hold the telephone handset firmly in position and provide excellent acoustic shielding. Good durability is provided by an injection-molded case made of special impact-resistant material. All electronic circuitry, switches and connectors are mounted on a single printed circuit board.

Operating Modes: Originate only, in half- or full-duplex.

Data Rate: Up to 300 baud.

Receiver Sensitivity: −35 dBM in acoustic mode.

Frequencies:

	Send	Receive
Mark	1270 Hz	2225 Hz
Space	1070 Hz	2025 Hz
Frequency Stability	0.3%	0.4%

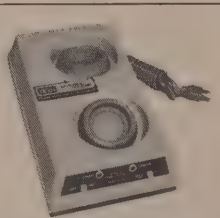
Modulation Technique: Audio Freq. — Shift Keyed (AFSK).

Transmit Power Level: −21 dBM ±3 dBM.

Line Coupling: Acoustic coupling to telephone line.

Interface: 20 mA teletype levels or EIA RS232C (both available on the same unit; both outputs can be used simultaneously if desired).

Compatibility: Used with remote terminals (teleprinter, typewriter, CRT display, plotter, card reader) to provide information transfer to/from a Bell 103A2 (or equivalent) dataset. Cannot be used with 230V 50 Hz, nor is it compatible with European modems.



Controls and Indicators: Power ON/OFF. Full-duplex/half-duplex (slide switch). Carrier ON indicator light.

Cables: Supplied w/8' cable equipped with Mate-N-Lok connector at terminal end for connection to terminals equipped with DEC compatible 20 mA interfaces. A cable should be ordered (DEC No. BC05D-25) to connect the DF01-A to terminals already equipped with EIA interface and cable.

MECHANICAL SPECIFICATIONS

Operating Temperature: 0°C to 60°C (32°F to 140°F).

Size: 7.5W by 3H by 12"L. **Wt:** 6 lbs. **Mounting:** Table case.

ELECTRICAL SPECIFICATIONS

Power Requirement: 115V 60 Hz (less than 10W).

Cat. No.	List	Cat.	Cash	Shipping Weight

VT52 DECSCOPE

VIDEO TERMINALS

Priced from $1729

VT52 DECscope
has a typewriter layout keyboard, keypad, upper and lower case alphabet, and advanced cursor control. Screen display capacity is 1920 characters (24 lines of 80 characters).

Features:

- *Price-competitive with teletypewriters.*
- *1920-character screen with twenty-four lines of 80 characters.*
- *Highly reliable keyboard featuring typewriter layout.*
- *Numeric function keyboard.*
- *Asynchronous data communication at individually switch-selected transmit and receive baud rates from 75 to 9600 baud.*
- *ASCII code utilized, plus additional commands through escape sequences.*
- *Extensive cursor controls.*
- *Horizontal tabs.*
- *Exclusive hold-screen mode prevents data loss regardless of host computer transmitting speed.*
- *Easy interfacing with 20-mA current loop or RS232C levels.*
- *Keystroke click for rhythmic typing.*
- *Three-key rollover protection.*
- *Full-duplex and full-duplex-with-local-copy modes.*
- *Printer interface option.*

DECscope is a character-oriented video terminal designed to replace electromechanical devices. Intended for asynchronous data communication systems. DECscope is compatible with most popular computers. DECscope is simple for operators to master, and noiseless for locations requiring silence. DECscope can reduce the high costs, both obvious and subtle, of teletypewriters and other video data terminals. The savings in operating costs are most meaningful. DECscope has a high throughput compared to teletypewriter devices. High reliability is the key to improved throughput. Electromechanical maintenance is eliminated, and electronic maintenance is minimal. DECscope costs less to keep running, and it keeps running longer.

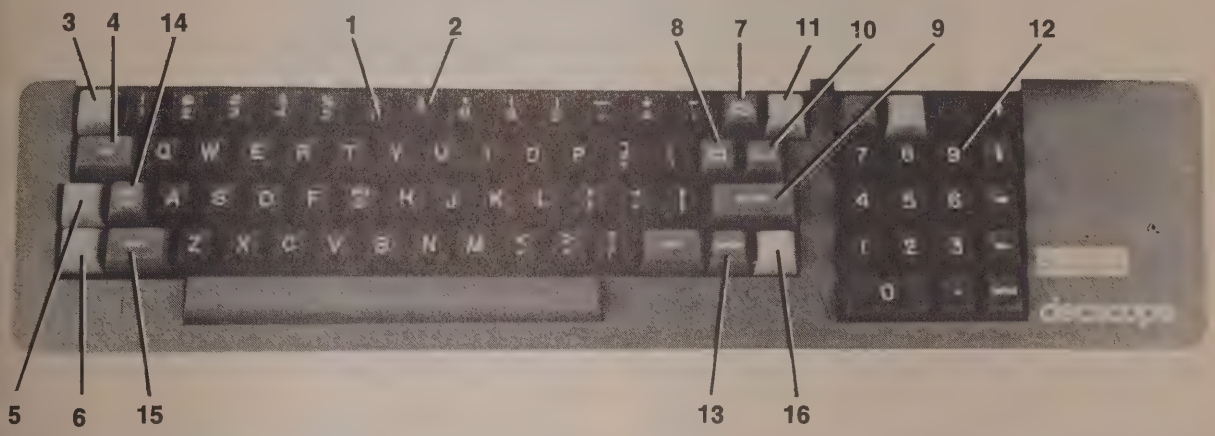
VT52 DECSCOPE

TYPEWRITER KEYBOARD

The keyboard is built to a universally accepted standard, the office typewriter (ANSI standard). DECscope's key layout, stroke, and touch are familiar to any typist. See keyboard close-up illustration. Training and familiarization time can be kept to a minimum without sacrificing operating accuracy and speed.

In hospitals and other sensitive locations, DECscope can operate in absolute silence. When silence is not required, operator can turn on an audible-response switch to produce a key-stroke click that encourages rhythmic, high-throughput keying, without the annoying noise of a teletypewriter.

DECscope also increases the operator's speed with three-key rollover protection to eliminate multiple-keying errors. Up to three keys can be depressed yet transmission will be correct if one of the first two keys typed is released before the third.



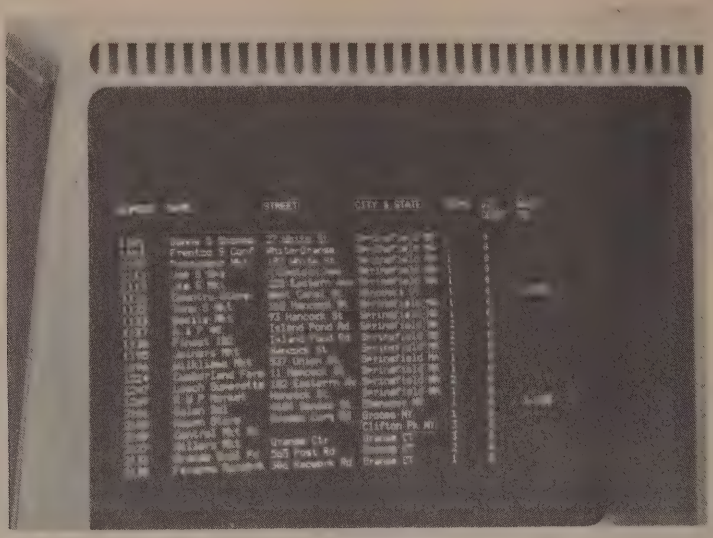
KEY AND CONTROL LOCATIONS AND FUNCTIONS

1. Labels can be placed here to identify 10 user-defined escape sequences called up by individual keys.
2. Ribbed lines cast in cabinet associate displayed escape sequence names with keys selecting them.
3. ESC (SEL) — Transmits the character ESC (escape) which, when received by the terminal from the host, introduces an escape sequence. If the terminal is in the local-copy mode or the host software echoes ESC back to the terminal, the ESC key initiates escape mode, indicating that the next character received is to be interpreted as a command rather than a character. Many software systems also assign a special meaning to the ESC character.
4. TAB — Moves cursor to the next tab stop; stops are positioned every eight spaces through 72nd space, then every space to 80th. No effect when cursor is at 80th.*
5. CTRL — Allows special characters to be transmitted. When control key is held down, the bit two of any character transmitted by the DECscope is sent as zero. These special characters are frequently used by system software, and some have special meanings to the DECscope when the host echoes them back or transmits them.
6. SCROLL — Functions only when DECscope is in hold-screen mode. Allows one new line to be displayed. With SHIFT key down, allows 24 new lines to be displayed, filling screen with new data.
7. BACK SPACE — Moves cursor one space left.*
8. LINE FEED — Moves cursor down one line. Also scrolls display after 24th line.*
9. RETURN — Moves cursor to left margin on same line.*
10. DELETE — Transmits a character which the host computer can use to institute a last-character erase sequence.
11. BREAK — Forces an interrupt of incoming messages when used with half-duplex system. Holds transmission line low as long as key is pressed. Included for compatibility with half-duplex systems.
12. NUMERIC KEYPAD — In alternate-keypad mode, numeral, decimal point, and ENTER keys transmit unique escape sequences, distinguishing them from alphanumeric keys.
13. REPEAT — Repeats, at rates up to 30 characters a second, any key held down simultaneously.
14. CAPS LOCK — Generates all upper-case characters, plus numerals.
15. SHIFT — Generates all upper-case characters, plus upper symbols on key caps.
16. COPY or PRINT — Functions when external hard copy option installed. Controls printout operation.

*These special functions occur only when character is echoed or transmitted from host computer to DECscope.

digital
DIRECT SALES CATALOG

VT52 DECSCOPE



Very Readable Screen

P4 phosphor is used for optimum character definition, giving the DECscope display better character resolution than a consumer-grade television set. Character brightness is operator-adjustable. The screen is recessed and tilted to avoid glare from overhead lighting. Because no filter covers the screen, it can be easily cleaned by the operator. However, for users with special applications, DECscope will accept colored filters.

Screen size is 24 lines by 80 characters (full 96 ASCII character set) on the VT52 Series. The VT52 has a 7 by 7 dot matrix for character shapes. Excellent upper and lower case definition is achieved, see illustration.

The screen's 80 character per line format allows the exact display of FORTRAN or COBOL full-card images; thus the DECscope can take the place of a key punch and card reader for program entry.

A wide range of cursor controls is provided, including both incremental and extended-movement commands utilizing escape sequences. Up, down, right, and left movements, see Table I, plus 8-space tabbing are available. Individual characters, lines, or the full screen can be erased using simple commands (ESC J and ESC K).

Use of the extended-movement commands can greatly increase an operator's throughput in form-filling tasks, for example, because the host computer software can interactively position the cursor at the next answer required, based on previous answers.

Two Operating Modes

DECscope operates in two modes: full-duplex, and full-duplex-with-local-copy.

The full-duplex-with-local-copy mode allows the operator to display and verify each character as it is being keyed for transmission. This feature makes DECscope compatible with software written for half-duplex terminals. In the conventional full-duplex mode, the character is keyed to the host computer and can be echoed back for display.

Switch-selectable transmit and receive speeds are set individually to the same or different speeds.

Transmission and reception speeds can be 75, 110, 150, 300, 600, 1200, 2400, 4800, or 9600 baud.

TABLE I
MANUAL CURSOR CONTROL COMMANDS

Cursor Direction	From VT52 Keypad	From Keyboard	Other Action
Up one line	↑	ESC A	No Scroll
Up one line		ESC I	Scrolls down
Down one line	↓	ESC B	No Scroll
Down one line		LF	Scrolls up
Right one column	→	ESC C	No erase
Right one column		Space	Erases
Left one column	←	ESC D	No erase
Left one column		BS	No erase
Home		ESC H	To start of top line

SCREENFILTERS — FOR VIDEO TERMINAL

Acrylic filters are available for use with DIGITAL's VT52 and VT50 Video Terminals. Filters serve to reduce excessive glare from overhead lighting. Shipping Weight: .5 lbs.

VT52 DECSCOPE

Interface: Software

Basically DECscope will operate with software handlers written for teletypewriters or other video terminals. But as with any interactive device the unique operational features of DECscope must be carefully considered for the intended application. The following aspects are key:

1. *Transmission Mode* — Full-duplex or full-duplex with local copy operation. Asynchronous transmission.
2. *Word Length* — 7-bit data words, plus even or no parity. All outgoing characters are generated using even-parity protocol (a word is judged correct if it contains an even number of ones). A slide switch on the bottom of the DECscope enables the operator to select no parity where the usual parity bit is always in a mark condition. Odd parity, and space, can be obtained by moving a jumper wire.
3. *Variable Baud Rates* — By switch selection from 75 to 9600 baud operation is possible. However, word length varies depending on baud rate. At 75, 150 and higher, the word length is 10 bits while at 110 baud the word length is 11 bits.
4. *Character Display Format* — Upper and lower case display. 12 lines of characters. Display width of 80 characters.
5. *Command Responses* — How DECscope reacts to commands generated by the host computer is a fundamental consideration. For example, commands such as control codes, escape sequences, cursor position control, automatic screen erasing, and hold-screen modes are all received from the host computer in ASCII format. Table II and Table III document the respective codes and their actions.

Interface: Hardware

Two interfaces are available for DECscope, the 20 mA current loop and the EIA RS232C standard. The VT52 can be ordered with either a 20 mA or EIA interface. For later conversion, optional, user-installed interfaces are available to provide both EIA capability for 20 mA-equipped units and 20 mA capability for EIA-equipped units. Refer to DECscope option listings on page 32.

The 20 mA loop is optically coupled and provides sufficient gain for systems requiring more than 20 mA switching capacity. The current loop can be operated off-line to insure that it is functioning properly before system installation. DECscope is passive with this interface in that the host computer supplies the driving current. Generally the DECscope with this interface is used for data input applications where the terminal is located no more than one thousand feet from the host computer. The actual reliable working distance depends on the cable used, the electrical noise present at the installation, and the host computer circuitry. Typical assignments: inventory control, job status, computer console, nursing station, and educational systems.

DECscopes equipped with the EIA interface are commonly used for remote order-entry or order processing from any location that has access to a dial telephone network or leased line. Typical assignments: time-share terminals, credit checking, order entry, reservations, and program development.

TABLE II — COMMANDS FROM HOST COMPUTER

Character(s) and Octal Code(s)	Action Taken
BEL (007)	Sounds the audible alarm.
BS (010)	Moves the cursor left one position, unless it was at the start of a line to begin with.
TAB (011)	Moves the cursor rightward to the next TAB stop, unless the cursor was at the end of a line to begin with. (TAB stops are fixed in columns 9, 17, 25, 33, 41, 49, 57, 65, 73, 74, 75, 76, 77, 78, 79, and 80.)
LF (012)	Moves the cursor down one line — performs an upward scroll if the cursor was on the bottom line.
CR (015)	Moves the cursor to the start of the same line it was on.
ESC (033)	Serves as a signal that the following character is to be interpreted rather than displayed; ESC introduces multicharacter commands called "Escape Sequences."
Displayable Characters (041 to 176)	The character is displayed at the cursor position; then the cursor is moved right one column, unless it was at the end of a line to begin with.
Space (040)	Space (040) blanks the character at the cursor position and moves the cursor right.
NUL (000) and DEL (177)	The terminal does not respond to NUL or DEL, in order to be compatible with slower electromechanical devices that use these characters as filler.

TABLE III — ESCAPE SEQUENCE COMMANDS FROM HOST COMPUTER

Escape Sequences	Effect
ESC = (033 075)	Enters alternate-keypad mode. In Alternate-keypad mode, keys on the numeric pad transmit unique Escape Sequences to distinguish them from similar keys on the main keyboard, and to invoke user-defined functions.
ESC (033 076)	Exits alternate-keypad mode and returns to Numeric-keypad mode. (Alternate-keypad mode remains in effect until this command disables it.)
ESC A (033 101)	Moves the cursor up one line, unless it was already on the top line — does not perform a scroll.
ESC B (033 102)	Moves the cursor down one line, unless it was already on the bottom line — does not perform a scroll.
ESC C (033 103)	Moves the cursor HOME: to the start of the it was already at the end of a line — does not erase the character at the old cursor position.
ESC D (033 104)	Moves the cursor left one column, unless it was already at the start of a line — same as BS (010).
ESC H (033 110)	Moves the cursor HOME: to the start of the top line.
ESC I (033 111)	Moves the cursor up one line — performs a downward scroll if the cursor was on top line.
ESC J (033 112)	Erases all data from the cursor position to the end of the screen.
ESC K (033 113)	Erases all data from the cursor position rightward on the same line.
ESC Y (033 131)	Direct Cursor Addressing feature — moves the cursor to any specified position on the screen, regardless of where it was before. Format is: ESC Y Line Number Column Number Line Number is one character; octal code 040 to refer to the top line, 041 to refer to the second line, . . . 067 to refer to the bottom line. Column Number can legally range from 040 (left-most column) to 157 (right-most column). The cursor is moved to the specified column of the specified line.
ESC Z (033 132)	Requests terminal to identify itself. Terminal will respond with a three-character Escape Sequence unique to its own configuration.
ESC [(033 133)	Enters Hold-screen mode. In Hold-screen mode, data will not be scrolled off screen until operator requests it by striking Scroll key.
ESC (033 134)	Exits Hold-screen mode. (Hold-screen mode remains in effect until this command disables it.)

Printer Option — The first three Escape Sequences perform the exact same functions as the COPY key:

ESC]	(033 135)	Print the Screen
ESC ^	(033 136)	Enter Auto-Print Mode
ESC _	(033 137)	Exit Auto-Print Mode
ESC V	(033 126)	Print Cursor Line
ESC W	(033 127)	Enter Printer-Controller Mode
ESC X	(033 130)	Exit Printer-Controller Mode

DIRECT SALES CATALOG

VT52 DECSCOPE

Controlled Scrolling

To allow time for reading long messages coming in at high speeds, the operator or host computer can put DECscope into a hold-transmission mode by initiating ESC [(033 133). Cancellation of this mode is achieved by ESC / (033 134).

When the terminal enters the hold-screen mode, the current line or any subsequent line selected by the operator is displayed until a line feed occurs or the 80th character position is reached. When an LF (line feed) is received, it is not immediately processed but stored in the housekeeping portion of the terminal's memory. Receipt of any subsequent character will cause the terminal to transmit X-OFF (023). That character, and any others which may be received between that time and the time at which X-OFF (023) is interpreted by the host and transmission is stopped, will be stored in a 13-position overflow portion of memory.

If the operator, by pressing the SCROLL key, allows another line to be displayed, the line feed is processed, then the overflow characters are processed (displayed) until the next LF is encountered. If the overflow is exhausted without encountering an LF, the terminal transmits X-ON (021).

If the host fails to stop sending and the overflow area fills, the terminal will process the line feed and the characters in the overflow area regardless of hold-screen mode.

The Auxiliary Keypad

An advanced feature of the VT52 is the auxiliary keypad that operates in one of two modes. Software can place the terminal in a mode in which the keypad as well as the main keyboard's numeral keys can be used for data entry. If it is desired to distinguish between the typing of keys on the keypad and keys on the main keyboard, software can select a mode — Alternate Keypad Mode — in which each key on the keypad transmits a unique Escape Sequence. See Table IV.

Easier manual control of the cursor is facilitated by "arrow keys." If the codes transmitted by the "arrow keys" are echoed back to the terminal, they will cause the cursor to move one position in the direction the arrow points in. The CONTROL, SHIFT, and CAPS LOCK keys do not affect the codes transmitted by the keys on the auxiliary keypad, in either keypad mode.

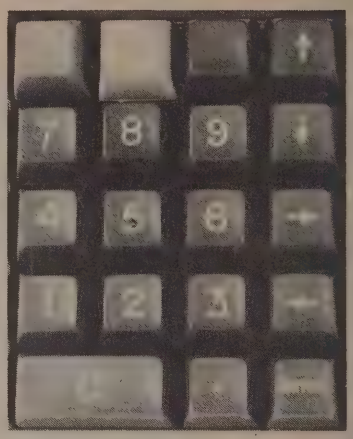

TABLE IV
KEYPAD COMMANDS

Typing the Key Labeled . . .	In Numeric-Keypad Mode, Transmits the Following Code(s)	In Alternate-Keypad Mode, Transmits the Following Code(s)
0	0	ESC ? p
1	1	ESC ? q
2	2	ESC ? r
3	3	ESC ? s
4	4	ESC ? t
5	5	ESC ? u
6	6	ESC ? v
7	7	ESC ? w
8	8	ESC ? x
9	9	ESC ? y
		ESC ? n
ENTER	CR	ESC ? M
(up arrow)	ESC A	ESC A
(down arrow)	ESC B	ESC B
(right arrow)	ESC C	ESC C
(left arrow)	ESC D	ESC D
(left blank key)	ESC P	ESC P
(center blank key)	ESC Q	ESC Q
(right blank key)	ESC R	ESC R

Printer Interface

The VT52 Printer Interface Module, VTXX-KA, is a field-installable option available on all new VT52s and certain units already in the field. It provides a data path between the VT52 Video Terminal and a serial or parallel printer such as the LA35 or LA180.

When this option is incorporated, there is a COPY (or PRINT) key at the lower right corner of the main keyboard. Using this key, the operator can make the terminal output text to the printer in one of two ways. The two variations depend on whether the operator holds down the SHIFT key when the COPY key is typed. If the COPY key is pressed without the SHIFT key down, then the terminal will output the entire contents of the screen to the printer. If the COPY key is pressed while the SHIFT key is held down, then the terminal enters Auto-Print Mode. Auto-Print Mode allows a variable number of lines of text to be the output to the printer. Whenever the terminal gets a Line Feed command to move the cursor down one line, the line the cursor was on at the time will be the output to the printer. This will be true for as long as the terminal remains in Auto-Print Mode. To take the terminal out of Auto-Print Mode, the operator types the shifted COPY key a second time. None of these three uses of the COPY key cause any codes to be sent to the host computer.

The three commands which the operator can issue by using the COPY key can also be issued from the computer. To command the terminal to send text to the printer, the host sends the VT52 Escape Sequences ESC], ESC Λ and ESC ___ (see Table III). There are two additional ways in which the host computer can operate the printer:

- By specifying individual lines to be printed, ESC V.
- By placing the terminal in a mode in which it sends the characters it receives to the printer instead of to the screen (Printer-Controller Mode ESC W, enter mode and ESC X, exit mode).

When the terminal receives ESC V from the host, it will output the entire contents of the line which the cursor is on to the printer.

If the printer has more than 80 columns, the columns to the right of the 80th column will never be used by the line-at-a-time PRINT commands, since it is impossible to construct a line on the screen of the VT52 with more than 80 columns. Many programs, however, will want to control the actions of the printer in more detail, without the "interpretive" activity of the VT52 (trimming blanks and inserting line delimiters). For example, the program may want to be able to print in all 132 columns of the printer, overprint lines, or send control codes to the printer. A program does this by placing the VT52 in Printer-Controller Mode. In Printer-Controller Mode, every character the VT52 receives will be passed directly to the printer without being converted or otherwise acted upon by the VT52. The VT52 becomes essentially a remote printer controller.

VT52 DECSCOPE

Printer Interface (Cont'd)

The characters ESC W, which the host sent to the VT52 to cause it to enter Printer-Controller Mode, are not passed to the printer. When the VT52 receives ESC X, which causes it to exit Printer-Controller Mode, the ESC will already have been sent to the printer. Instead of sending the X to the printer, the VT52 sends the character CAN (whose code is 030) to cancel the effect of the ESC. The action of the printer is not instantaneous and may lag behind data transmission from the host to the terminal. But in situations where information which has been requested to be printed might be destroyed or altered before it can be printed, the terminal will cease processing incoming characters. The terminal begins putting incoming characters in its Silo buffer, and transmits X-OFF to the host. When the necessary printing has been finished, the terminal will begin to process the characters in the Silo. When it has processed all the characters in the Silo, the terminal will send X-ON to the host to indicate that it is ready for more characters.

When the terminal is in Printer-Controller Mode, so that data flows through the terminal and out to the printer as it is received from the host, the terminal will use the Silo, and X-OFF and X-ON signals, to limit the data rate on the transmission line to a rate the printer can keep up with. Therefore, the maximum data rate for output to the printer via Printer-Controller Mode is the minimum of the baud rate between the terminal and the printer, and the baud rate between the terminal and host.

On the interface module itself, there is an 8-position rotary switch. The switch selects which of the interfaces (serial or parallel) will be used and, if the serial interface is selected, which baud rate will be used. Selectable serial baud rates are: 150, 300, 600, 1200, 2400, 4800, and 9600 baud.

The host cannot determine if the terminal operator has pressed the COPY key. Host software MUST support synchronization with X-OFF/X-ON (must suspend its transmission promptly upon receiving X-OFF and resume upon receiving X-ON), or else the Silo may overflow, interfering with the accuracy of the output.

Status Reporting

When VT52s and other terminals such as the VT50 are used in the same computer system, software can send each terminal a command (ESC Z) to identify itself. The VT52 will automatically transmit a three-character Escape Sequence which identifies it as a VT52. The host thus determines which features can be used with the terminal presently attached.

The significance of the status reporting feature is that VT50s, VT52s and future VT models can be freely interchanged within a system, with the software responding correctly to each different type of terminal.

OPERATIONAL SPECIFICATIONS

Display	VT52
Format	24 lines by 80 characters
Character matrix	7 by 7
Character size	.08 by .16″
Screen size	8.3 by 4.1″
Character set	ASCII 96-characters (upper/lower case, numeric, punctuation)

Alphanumeric Keyboard	
Character	ASCII 96-characters plus 32 control codes
Key layout	ANSI typewriter
CAPS LOCK key	Yes
Numeric Keypad	10 decimal digits, decimal point, ENTER (CR) key, four cursor controls, three user-defined (blank) keys

Communications	
Interface	20 mA current loop, or EIA RS232C
Code	USASCII extended by Escape Sequences
Speed — Full-duplex (switch-selectable)	75, 110, 150, 300, 600, 1200, 2400, 4800, and 9600 baud
Speed — Full-duplex with local copy (switch-selectable)	75, 110, 150, 300, 600, 1200, 2400, 4800, and 9600 baud
Speed — Full-duplex split speeds (switch-selectable)	Transmission at 75, 150, 300 baud with reception at 600, 1200, 2400, 9600 baud

Cursor	
Type	Blinking underline
Control	Up or down 1 line, right 1 character, left 1 character, home, tab, erase to line end, erase to screen end, move to host computer commanded position

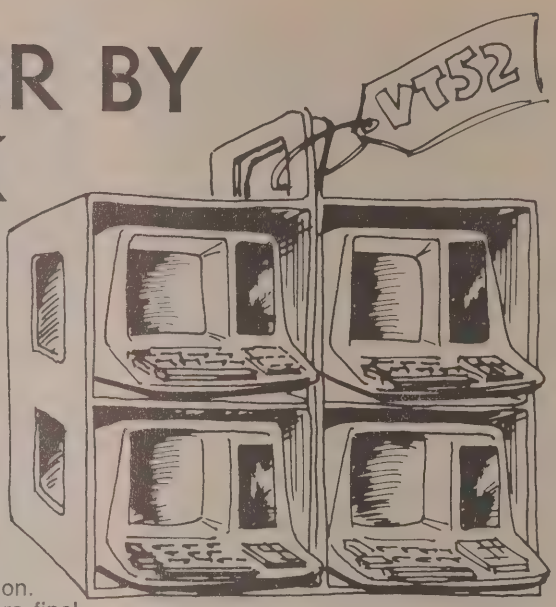
CATALOG NUMBERS VS MODEL NUMBERS

The Catalog Numbers published in this catalog relate only to purchases made through the Direct Sales Catalog. The **Bold Face** portion of each Catalog Number is the official DIGITAL Model Number. All invoices and packing slips will reference only the Model Number.

digital DIRECT SALES CATALOG

VT52 DECSCOPE 4-PACK

IT'S CHEAPER BY THE 4-PACK



A special 4-pack of VT52 DECscopes is available through the Direct Sales Catalog. Buying by the 4-pack saves you money. $1600 off the list price. That's $400 a terminal.

You must agree to some special terms and conditions when you purchase a 4-pack. For instance, all four DECscopes must be of exactly the same model. And all four must be released for shipment simultaneously to a single destination. Further, all sales on the 4-pack DECscope are final once shipped from DIGITAL. Last but not least, the 4-pack price is the lowest possible. No other discounts can apply. But all that isn't too bad when you consider the absolute dollar savings. It's almost like getting *one* DECscope for free. Here's how to order your 4-pack:

Cat. No.	Description	Qty.	4-Unit List Price	Special 4-Pack Price	Catalog 4-Pack Cash Price	Combined Shipping Weight

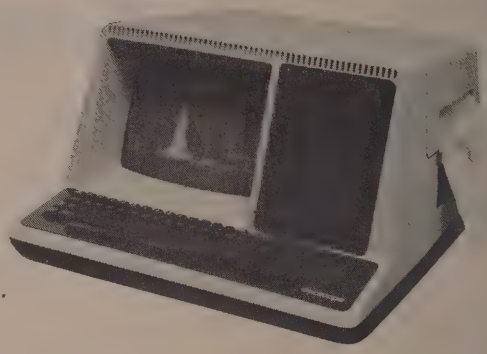
- *Hardcopy Output of both Alphanumerics and Graphics.*
- *Universally Accepted Standard Typewriter Keyboard.*
- *Choice of Interface and Cable to Host Device; 20 mA Current Loop, or EIA RS232-C.*
- *Direct Cursor Addressing Capability in Alphanumeric Mode.*
- *Generation of User Defined Codes from the Keyboard.*
- *A Repeat Key on the Keyboard.*
- *25 Seconds per Copy.*
- *Hardcopy can be by Keyboard Button Selection or Under Program Control.*



The VT55 is an on-line interactive CRT terminal that offers waveform graphics — a new and significant capability which meets the needs of a variety of applications. Two graphs of 512 data points each can be displayed with a screen resolution of 512x by 236y. These graphs can be in point-plot or histogram (shaded) format. Graph markers (20-point vertical lines) are available (one per data point) to facilitate data editing and graph generation. In addition, the VT55 allows simultaneous display of any combination of text and graphics. It can hold up to 1920 characters in 24 lines of an 80 characters-per-line matrix. The 24th line of text is positioned below any graphs to facilitate labeling the x axis.

To complete the picture, a user can take a permanent record of a display image with the VT55's optional hard-copy unit. By simply pressing a specified key, the VT55 supplies a hard copy reproduction of the display screen for both characters and graphs.

The display of alphanumeric and graphic data is performed by the raster scan method. Raster scan infers that the beam of the cathode ray tube is swept completely across the phosphor surface of the tube 50 or 60 times (depending on the power line frequency) in a second. Information, generated via the memory, turns the beam on and off, intensifying dots on the phosphor at the proper time to produce characters and graphics on the video screen. This is basically the same method used by consumer television sets.

For most applications, the VT55 will be interfaced to a host computer and operated in the full-duplex communication mode. Data transmitted by the VT55 is received by the host computer. Data received by the VT55 is determined solely by the host computer. ASCII 96-character set plus 32 control codes can be transmitted.

The VT55 is capable of sending and receiving at baud rates from 75 to 9600 bits per second. Data is sent in serial digital format for the 20 mA current loop interface models. The EIA interface models allow the use of the VT55 with RS232-C signals.

Alphanumeric Mode

In the Alphanumeric mode, data received via the serial line input is stored in the alphanumeric memory and printed as characters, numerals, and symbols on the screen if the code represents a printable character.

Received printable symbols are displayed on the video screen in a 24-horizontal line by 80-vertical column format. Each character is displayed as a 7 by 7 dot matrix; the matrix size is approximately 4.0mm by 4.0mm. Character placement on the screen is controlled by the alphanumeric cursor. The cursor is a blinking, underlining line that indicates the screen position in which the next received character is to be placed. When receiving a new character, the cursor automatically increments to the right. The cursor may also be shifted around the screen by receipt of alphanumeric cursor control commands or the auxiliary keypad.

Graphics Mode

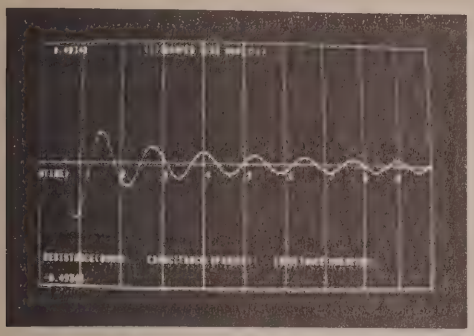
Graphics mode performs in essentially the same way as Alphanumeric mode with regard to character font, control codes, etc. The only difference is that the subset of 32 lowercase characters is replaced by a set of 30 special characters to extend the capability of the terminal in printing equations and fractions and plotting line graphs.

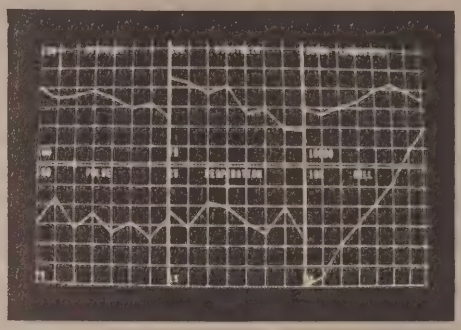
When the VT55 is in the Graph Drawing mode, incoming digital data, aside from the control codes, is treated as graph plotting information. This data represents Graph Drawing mode instructions and data points. The VT55 can plot two 512-point graphs, graph 0 and graph 1, each represented as a line graph or histogram. Vertical and horizontal lines that span the viewable screen area may be displayed anywhere in the viewable area of the screen. These lines can be combined to form grids to aid in labeling values on the graphs. The VT55 has graph markers as an additional graph feature. These are short vertical markers useful in defining important features on the graph. All graph features of the VT55 are individually controllable by the programmer. All data is stored in a separate graph memory. Keeping graph information separate from the alphanumeric information storage allows superposition of the alphanumeric and graph information and allows the removal of one type of information without affecting the other. For example, a label could be printed over a graph and then removed without affecting the graph. See figures on p. 35 for some typical graph capabilities.

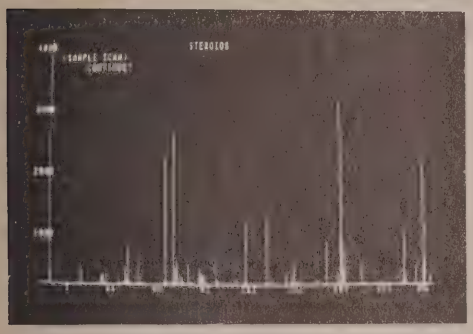
digital DIRECT SALES CATALOG

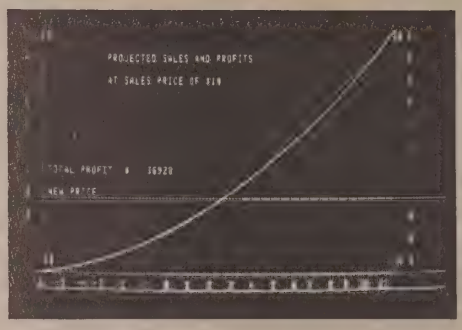
VT55 DECGRAPHIC SCOPE

SAMPLE DISPLAY GRAPHS*









*Apparent distortion of close-up photo of CRT is due to curved surface of screen.

Graphics Mode (Cont'd)

The VT55 has an ensemble of nine graph commands which permit loading of individual points on the two graphs and loading and clearing of individual markers, vertical lines, and horizontal lines. The user may choose to blank this data from the screen, but hold the data in the internal graph memory for later viewing. All graph memory may be cleared with one instruction when desired.

Copier

The optional copier allows the user to make a hard copy duplicate of the video screen. The paper copy includes the displayed graphs as well as the alphanumeric characters. The copier is contained within the VT55 cabinet and the paper output emerges from the right side of the terminal. Upon command, the VT55 generates a hard copy of the display on the screen. Using a scanning technique, the terminal generates the image of the display in about 25 seconds. The display image is approximately 3H by 7″W. As the copier uses rolled paper, many lines of text and graphs may be formatted on a standard letter-size sheet of paper. The roll is 8½″W by 100′L. The copier's scanning technique consists of scanning an electrode across a surface of special recording paper in exactly the same pattern as the raster scan on the VT55 screen. An electrode on the opposite face of the paper receives a voltage from the VT55 microprocessor in conjunction with the image to be recorded. The potential across the two electrodes causes a current to pass through the recording paper and actually plates metal from one of these electrodes onto the paper to form a dark point.

Keyboard

The VT55 keyboard is compatible with ANSI standard typewriter keyboard. This keyboard layout is similar to the layout found on an office typewriter, rather than on a keypunch machine. It contains the keys that generate the 96-character set of ASCII and a control key for the generation of the 32 control codes. Unique VT55 function keys are on the keyboard as well. See Operational Specifications for details of other keyboard features.

VT55 DECGRAPHIC SCOPE

Software

The following high level software facilities are currently available under the following PDP-11 operating systems and languages.

- *RT-11, a high performance, real-time operating system designed for dedicated single-user or foreground/background applications.*
- *VT55 support under RT-11 is available as follows — RT-11/FORTRAN Extensions*

  RT-11 BASIC
  FOCAL/RT-11
- *RSX-11M, a multi-processing real-time system designed for a wide range of applications where many tasks must be monitored and controlled concurrently.*
- *The VT55 is supported by FORTRAN using the same subroutine calls and functions as the RT-11 version.*

OPERATIONAL SPECIFICATIONS

ALPHANUMERICS

Character Lines: 24

Character Columns: 80

Control: Blinking alpha cursor.

Character Set: 96-character upper and lower case ASCII subset plus 32 control characters and special graphic characters.

Special Features: Upward and downward scroll, bell, erase, erase, tabulate, cursor control, character on a line.

Character Format: 7 by 7 dot matrix.

GRAPHICS

Resolution: 512 horizontal by 236 vertical points.

Graphs or Histograms: Two single-valued functions of x, each individually controlled.

Grid: 512 vertical lines and 236 horizontal lines, each individually controlled.

Graphic Marker: 512/graph, total of 1024. Each graphic marker is individually controlled.

Special Features: Individual blanking and unblanking of all graphic features, clear all graphics.

Linearity: ±½ point.

USER CONTROLS

Intensity: Variable to adjust screen brightness.

Parity: Even, odd or non parity switch selectable.

Power/Logic Reset: Turns line voltage on and off and resets unit to Alphanumeric mode.

KEYBOARD

Format: ANSI x 4.14-1971 standard typewriter keyboard.

Keyclick: Audible feedback on each keystroke.

Error Correction: Three-key rollover to reduce errors caused by fast typing.

Special Keys: Extra control keys for special and commonly used control functions include ESC, TAB, SCROLL, BACKSPACE, BREAK, LINE FEED, RETURN, COPY, REPEAT.

Keypad: 19 button keypad efficiently designed for entry of numeric data plus special user defined codes may be generated with special Terminal mode.

COPIER

Image Copied: Display on screen less the alphanumeric cursor.

Time/Print: Approximately 25 seconds/copy.

Copy Size: Approximately 3H by 7″W.

Paper Roll Size: 100′L by 8½″W.

Character Format: 7 by 7 dot matrix.

Graph Field: 512 points horizontal by 236 points vertical.

User Controls: Variable character width adjustment.

Baud Rate/Interface Mode: Allows choice of baud rate, full-duplex, full-duplex with local copy and local mode with rotary switches.

Hold Screen Mode: Allows interruption of data transmission for extended display viewing.

Terminal Identifier: Terminal will respond with ESC/E when receiving ESC/Z.

COMMUNICATIONS SPECIFICATIONS

INTERFACE

Type: 20 mA current loop or EIA RS2326 interface.

SPEED

Full-Duplex: 75, 110, 150, 300, 600, 1200, 2400, 4800, and 9600 baud.

Full-Duplex with Local Copy: 110, 150, 300, 600, 1200, 2400, 4800, and 9600 baud.

Full-Duplex, Split Speeds: Transmission at 75, 150, 300, or 4800 baud with reception at 110, 600, 1200, 2400, 4800, or 9600 baud.

TRANSMISSION

10-Bit Length: 75, 150, 300, 600, 1200, 2400, 4800, and 9600 baud.

11-Bit Length Parity: 110 baud only. Generated on transmission as even parity or a mark. (No parity is switch-selectable.) Parity is not checked on reception.

SUPPLIED CABLE LENGTH

20 mA Model: 25′ (max. length 1000′).

EIA Model: 25′ (max. length 50′).

SCREENFILTERS — FOR VIDEO TERMINAL

Acrylic filters are available for use with DIGITAL's VT55 Graphic Terminal. Filters serve to reduce excessive glare from overhead lighting.
Shipping Weight: .5 lbs.

DIRECT SALES CATALOG

The Direct Sales Catalog is: MICROCOMPUTERS

You may be able to design a microcomputer. But do you really want to manufacture one? Designing a microcomputer is just the first step. You need expensive people and equipment to build it, and complex quality controls to make sure it's right. It has to be right, because your company's reputation is on the line.

DIGITAL's LSI-11 family of microcomputers — LSI-11, LSI-11/2 and PDP-11/03 — not only supports the widest range of software and peripherals of any microcomputer, it's built to the most exacting quality control standards in the industry.

This level of quality control would strain your budget, but DIGITAL can support it because of the large number of LSI-11s that come off our production line.

DIGITAL tests everything: processor chips, p.c. board, memory, modules, packaging, the finished assembly. And DIGITAL's technicians aren't afraid to throw out any product that doesn't measure up.

DIGITAL finishes up its LSI-11 testing program with a detailed visual inspection, because in spite of everything that the LSI-11 board has been through, we still want it to look nice for you.

CALL: 800-258-1710 (N.H. Residents 603 - 884-6660) 8:30 am to 5 pm EST.

digital
DIRECT SALES CATALOG

LSI-11, LSI-11/2 AND PDP-11/03

THREE FORM FACTORS FOR FLEXIBILITY

Powerful microcomputers packaged to suit your every application. All based on the Large Scale Integration version of the worldwide standard PDP-11. Offered for the first time in the Direct Sales Catalog is the new LSI-11/2 downsized version of the board type LSI-11. It adds another dimension to microcomputers. In the following pages you will find a wide selection of interfacing modules to choose from. No matter which packaging style you select you are well supported. In fact you can even move directly to a complete system. Check out the PDP-11V03 Computer System also offered for the first time in this catalog. See p. 62.

At the heart of all versions of the LSI-11 "family" is the Central Processing Unit. The functions of this unit are implemented using MOS LSI. A technical description of this key unit is on the opposite page.

THE PDP-11/03 BOXED MICROCOMPUTER

The PDP-11/03 comprises quad size modules mounted in an attractive enclosure and equipped with a power supply. Double size optional modules can, of course, be added to the system by mounting them in the enclosure. This version of the LSI-11 family is recommended for applications requiring fewer than 10 units because it requires very little "hardware engineering" to adapt it to an application. The external dimensions of the enclosure, which can be mounted on a standard 19″ rack, are 3½″ high by 19″ wide by 13″ deep. The enclosure can contain a CPU and 16K RAM and still have room inside for up to four double size boards.

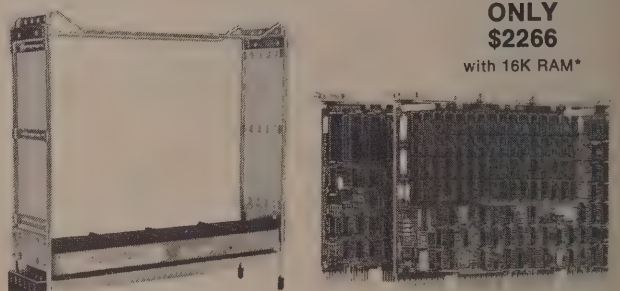
ONLY $3170
with 16K RAM*

*Price includes enclosure and power supply.

THE LSI-11 QUAD SIZE FAMILY

The LSI-11 comprises modules that are quad size with dimensions 10½″ x 8½″. The CPU module board can have 4K RAM on board with additional RAM being added in increments of 4K or 16K. All the options that are being developed for the new LSI-11/2 form factor will function with the LSI-11. As shown the backplane and card cage assembly is approximately 11″ high by 11″ wide by 3″ deep. It will hold four quad-size boards or the CPU with 4K RAM and up to 6 double-size boards.

ONLY $2266
with 16K RAM*



*Price for module boards only.

THE LSI-11/2 DOUBLE SIZE FAMILY

The LSI-11/2 comprises modules that are double size with dimensions 5″ x 8½″. By separating the CPU functions from memory functions this new downsize family was created. The backplane and card guide assembly shown is only 10.8″ high by 5.75″ wide by 3″ deep yet can hold four modules which could be typically the CPU, 32K RAM, a 4-line Serial Line Unit and an IEEE Instrument Bus Interface.

ONLY $1538
with 16K RAM*

*Price for module boards only.

CENTRAL PROCESSING UNIT

The 16-bit central processor functions are contained in four silicon gate, N-channel, metal oxide semiconductor (MOS), large-scale integration (LSI), integrated circuit chips. These chips provide all instructions, decoding, bus control, and arithmetic/logic unit functions of the processor. The central processor contains eight general registers which can serve as accumulators, index registers, autoincrement/autodecrement registers, or stack pointers.

The LSI-11 bus *is a high-speed, 38-line parallel bus containing data, address, control and synchronization lines. Sixteen lines are used for time multiplexing of data and addresses. All data and control lines are bidirectional, asynchronous, open-collector lines capable of providing a maximum parallel data transfer rate of 833K words per second under direct memory access operation.*

The basic instruction set *has more than 400 powerful PDP-11/40 instructions. There are no separate memory, I/O, or accumulator instructions. Thus the user can manipulate data in peripheral device registers as flexibly as in memory registers.*

Extended instruction and floating-point instruction *options provide fixed-point multiplication, division, and multiple shifting in single-precision arithmetic as well as floating-point addition, subtraction, multiplication and division. Order option KEV11, a plug-in chip.*

Single-level, vectored, automatic priority interrupt *provides for user-implementation of a priority-structured I/O interrupt system. Devices electrically closest to the microcomputer module receive highest priority, for either DMA or programmed I/O transfers. (DMA devices have a higher priority than programmed I/O devices). This structure allows nesting of interrupts to as many levels as there are devices connected to the LSI-11 bus. Upon receipt of an interrupt grant, the device directs the processor to an interrupt vector location which contains the starting address of the device interrupt service routine and the new processor status word.*

Real-time clock input signal line *functions as an external interrupt line. When connected to a frequency source, it can serve as a real-time processor. interrupt. A jumper on the microcomputer module enables or disables this highest priority interrupt function.*

Asynchronous operation *of all system modules permits each to function at its highest possible speed.*

Power fail/autostart *provides jumper-selective restart through a power-up vector, a defined location, or an octal debugging technique (ODT) microcode.*

ODT/ASCII console routine/bootstrap *all are resident in microcode to provide automatic entry into the debugging mode, replacement of conventional programmers' panel lights and switches with any terminal device generating standard ASCII codes, and the ability to automatically commence operation through resident bootstrap routines.*

Word or byte processing *provides very efficient handling of 8-bit characters without the need to rotate, swap, or mask.*

digital LSI-11
DIRECT SALES CATALOG

AVAILABLE IN 7 PROCESSOR-MEMORY BASIC CONFIGURATIONS

DIGITAL's highly successful LSI-11 Microcomputer now can be bought in three NEW basic processor-memory configurations. This means that there are currently seven basic configurations available through the Direct Sales Catalog. By adding the three new ones, DIGITAL has been able to provide system designers with basic LSI-11 configurations in 4K, 8K, 12K, 16K, and 20K RAM versions. For a system that requires 8K, 12K, or 20K, the new configurations are considerably less expensive (more than 30% for a 20K system) than a system configured with extension memory modules. Note that the new configurations apply ONLY to the "individual pc board" LSI-11 style and not to the "packaged" PDP-11/03 which is currently available only in 4K and 16K basic configurations.

All of the features that have made LSI-11 the microcomputer industry standard of excellence are incorporated in the new configurations. Features such as:

- *16-bit MOS, LSI central processor.*
- *Parallel I/O bus port.*
- *PDP-11/40 instruction set.*
- *DMA transfer rate of 833K words per sec.*
- *Power-fail/auto restart.*
- *Vectored interrupt*
- *Real-time clock input.*
- *Octal debugging routine in microcode.*
- *ASCII console routines in microcode.*
- *Microcode bootstrap routine.*
- *Expandable arithmetic capabilities.*
- *Word or byte processing.*

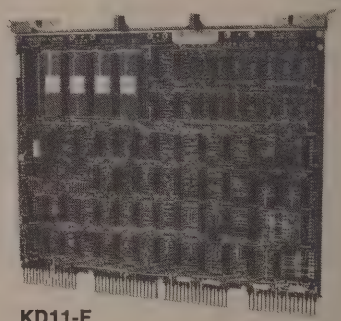
The new configurations are the result of "bundling" various processor and memory options and offering them at attractive prices. Following are the details of each basic configuration.

KD11-F Basic Processor with 4K RAM

The KD11-F is contained entirely on one 8.5 by 10" (Quad-height) pc board. The 4K RAM is 4096 words by 16 bits implemented by dynamic MOS LSI. A memory register addresses all onboard memory plus expansion memory up to 32K words or 64K bytes.

Memory refresh is executed by microcode. However, where interrupt latency, due to the microcode refresh functions, cannot be tolerated, refresh option REV11-A, or -C should be ordered.

Power requirements for KD11-F are +5V dc ±5% at 1.8A (2.4A max.) and +12V dc ±3% at 0.8A (1.1A max.). The H780-H supply described in this catalog can provide the necessary power and control functions. Note if H780-H is **not** used, a KPV11 Power Failure/Line Time Clock module (or equivalent) must be used for correct power control for the KD11-F. Temperature Range: 5°C to 60°C (41°F to 140°F). Relative Humidity: 10% to 95% (no condensation). Maximum Air Temperature Rise Across Module: 7°C (12.5°F).



KD11-F

Cat. No.	List	Cat.	Cash	Shipping Weight
B-KD11-F*	$990	$941	$901	15 lbs.

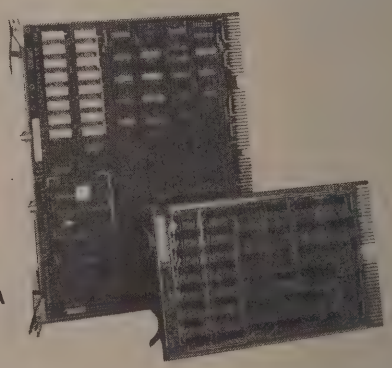
*Prices shown include a ZJV01-RB literature and diagnostic package.

KD11-FA Basic Processor with 8K RAM

The KD11-FA is contained on one 8.5 by 10" quad height and one 8.5 by 5" double height pc boards. The 8K RAM is 8192 words by 16 bits implemented by dynamic MOS LSI. A memory register addresses all 8K words with expansion capability up to 32K words or 64K bytes. Memory select circuitry allows for operation on 4K address boundaries.

Dynamic memory refresh is performed automatically every 1.67 milliseconds by microcode on the basic microcomputer module. However, where interrupt latency, due to the microcode refresh functions, cannot be tolerated, refresh option REV11-A or -C should be ordered.

Power requirements for the KD11-FA are +5V dc ±5% at 2.36A (3.52A max.) and +12V dc ±3% at 1.06A (1.68A max.). The H780-H power supply described in this catalog can provide the necessary power and control functions. Note if H780-H is not used, a KPV11 Power Fail/Line Time Clock module (or equivalent) must be used for correct power control for the KD11-FA. Temp. Range: 5°C to 60°C (41°F to 140°F). Relative Humidity: 10% to 95% (no condensation). Max. Air Temp. Rise Across Module: 7°C (12.5°F).



KD11-FA

Cat. No.	List	Cat.	Cash	Shipping Weight
B-KD11-FA*	$1240	$1178	$1128	18 lbs.

*Prices shown include a ZJV01-RB literature and diagnostic package.

BASIC CONFIGURATIONS (Cont'd)

KD11-FB Basic Processor with 12K RAM

The KD11-FB is contained on one 8.5 by 10″ quad height pc board and two 8.5 by 5″ double height pc boards. Each board contains 4K of RAM for a total of 12,288 words by 16 bits implemented by dynamic MOS LSI components. A memory register addresses all 12K words with expansion capability up to 32K words or 64K bytes. Memory select circuitry allows for operation on 4K address boundaries. Dynamic memory refresh is performed automatically every 1.67 milliseconds by microcode on the basic microcomputer module. However, where interrupt latency, due to the microcode refresh functions, cannot be tolerated, refresh option REV11-A or -C should be ordered.

Power requirements are +5V dc ±5% at 2.92A (4.64A max.) and +12V dc ±3% at 1.32A (2.26A max.). The H780-H power supply described in this catalog can provide the necessary power and control functions. Note if H780-H is not used, a KPV11 Power Fail/Line Time Clock module (or equivalent) must be used for correct power control for the KD11-FB. Temperature Range: 5°C to 60°C (41°F to 140°F). Relative Humidity: 10% to 95% (no condensation). Maximum Air Temperature Rise Across Module: 7°C (12.5°F).

KD11-FB

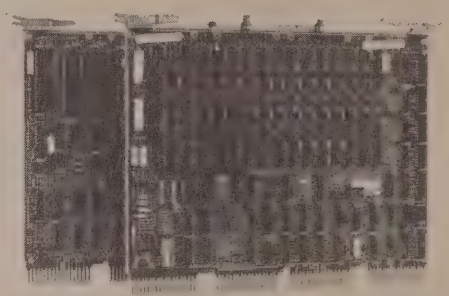
Cat. No.	List	Cat.	Cash	Shipping Weight
B-KD11-FB*	$1490	$1416	$1356	20 lbs.

*Prices shown include a ZJV01-RB literature and diagnostic package.

KD11-R Basic Processor with 16K RAM

The KDR11-R has two 8.5 by 10″ (quad-height) pc boards to contain the central processor functions and the MOS LSI dynamic memory chips. Memory size is 16K words by 16-bits. A memory register addresses the KD11-R's internal memory plus expansion memory up to 32K words or 64K bytes. The memory refresh function is not by microcode from the central processor but is an independent function. Thus the refresh capability of Option REV11-A or -C is not applicable to this configuration. Note illustration shows the two boards of this configuration with optional arithmetic expansion IC package KEV11 installed (lower left corner of right-hand board).

Power requirements are +5V dc ±5% at 2.7A (4.1A max.) and +12V dc ±3% at 0.8A (1.2A max.). The H780-H power supply described in this catalog can provide the necessary power and control functions. Note if H780-H is **not** used, a KPV11 Power Fail/Line Time Clock Module (or equivalent) must be used for correct power control for the KD11-R. Temperature Range: 5°C to 60°C (41°F to 140°F). Relative Humidity: 10% to 95% (no condensation). Max. Air Temperature Rise Across Module: 7°C (12.5°F).



KD11-R

Cat. No.	List	Cat.	Cash	Shipping Weight
B-KD11-R*	$2490	$2366	$2266	20 lbs.

*Prices shown include a ZJV01-RB literature and diagnostic package.

KD11-FC Basic Processor with 20K RAM

The KD11-FC is contained on two 8.5 by 10″ quad height pc boards. 4K of dynamic RAM memory is located on the processor board and the remaining 16K on the second board. The 20K RAM is 20,480 words by 16 bits implemented by dynamic MOS LSI. A memory register addresses all 20K words with expansion capability up to 32K words or 64K bytes. Memory select circuitry allows for operation on 4K address boundaries.

Memory refresh of the KD11-FC system may be handled by one of several means. Dynamic memory refresh of the entire system can be performed automatically every 1.67 milliseconds by the microcode on the basic microcomputer module. Also, the 16K memory board has the capability of providing its own on-board memory refresh. Additionally, if interrupt latency, due to the microcode functions, cannot be tolerated, refresh option REV11-A or -C should be ordered. With this option installed in the system, the automatic refresh functions of the processor and 16K memory boards must be disabled.

Power requirements are +5V dc ±5% at 2.8A (4.4A max.) and +12V dc ±3% at 1.34A (1.66A max.). The H780-H power supply described in this catalog can provide the necessary power and control functions. Note if H780-H is not used, a KPV11 Power Fail/Line Time Clock module (or equivalent) must be used for correct power control for the KD11-FC. Temperature Range: 5°C to 60°C (41°F to 140°F). Relative Humidity: 10% to 95% (no condensation). Maximum Air Temperature Rise Across Modules: 7°C (12.5°F).

LSI-11 AND PDP-11/03

PDP-11/03 PACKAGED MICROCOMPUTER

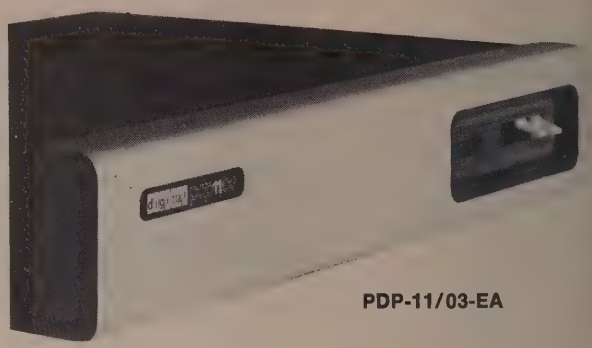
- *PDP-11/03-EA with 4K RAM Memory*
- *PDP-11/03-KA with 16K RAM Memory*

The PDP-11/03 is an enclosed combination of the LSI-11 modules and accessories. It comprises a 19″-rack mountable enclosure measuring 3½ by 19 by 13″, an H9270 backplane and card-guide assembly, plus a central processor and RAM memory. An H780-H power supply, which includes indicators, switches and a dual-fan assembly, is incorporated in the enclosure. Input voltage required is 90-132V ac (47-63 Hz). Max. Power Consumption: 210 watts at full load.

The enclosure has a removable front panel (pop panel). It can be easily removed to allow front access to the modules. The power supply indicator/switch panel (at right) does not detach with the front panel so remains functional during servicing. Temperature Range: 5°C to 50°C (41°F to 122°F). Humidity: 10% to 90% (no condensation).

Two basic congurations of PDP-11/03 can be ordered: **PDP-11/03-EA** which has a 4K RAM memory and the central processor function on one quad-height board. This leaves room in the enclosure for up to six double-height modules. Where interrupt latency cannot be tolerated, an external refresh option REV11-A or -C should be specified (one double-height board).

PDP-11/03-KA which has a 16K RAM memory. The central processor and memory are on two quad-height boards. The enclosure can, therefore, contain up to four more double-height modules. No external refresh option is required with this configuration unless other optional memory requires refresh.



PDP-11/03-EA

FEATURING:

- 16-bit MOS, LSI central processor
- Parallel I/O bus port
- PDP 11/40 instruction set
- DMA transfer rate of 833K words per sec.
- Power-fail/auto restart
- Vectored interrupt
- Real-time clock input
- Octal debugging routine in microcode
- ASCII console routines in microde
- Microcode bootstrap routine
- Expandable arithmetic capabilities
- Word or byte processing

MOUNTING HARDWARE AND ACCESSORIES

Expansion Boxes — BA11-ME

BA11-ME expansion box provides a most convenient means for expanding existing LSI-11, PDP-11/03, and PDP-11V/03* systems. Each expansion box includes an H9270 backplane, an H780 power supply (which is capable of supplying sufficient power to all modules contained within the expansion box), and a rack-mountable enclosure. The enclosure is identical in size and design to that of the PDP-11/03. However, the switch/indicator control panel is not included (part of the H780 power supply in PDP-11/03 systems). The BA11-ME requires 115V rms, 50 or 60 Hz input power. Note the power supply is a "slave" unit. The system must have a master supply such as H780-H included. These expansion boxes are, therefore, only to be used to expand a system and not as a primary enclosure.

* See page xx in catalog.

Jumper Cable Assemblies and Terminator Module (TEV11)

When assembling a two-backplane LSI-11 or PDP-11/03 system, a BCV1B jumper cable assembly and a 120 ohm terminator module TEV11 are necessary. BCV1B comprises two BC05L cables, one M9400-YE, and an M9401 backplane connector. To expand to a third backplane, one BCV1A jumper cable assembly must also be ordered. BCV1A comprises two BC05L cables and two backplane connectors M9400-YD and M9401. At least a 4-foot length difference must be maintained between the BCV1A-XX and BCV1B-XX. Jumper cables are equipped at each end with Berg 40-conductor connectors. Note: If Option REV11-A is part of the system, terminator module TEV11 is not needed.

Cat. No.	Description	List	Cat.	Cash	Shipping Weight
B-**BCV1A-XX***	Cable Assembly — 2′, 4′, 6′, or 10′	**$210**	**$200**	**$191**	2 lbs. (2′ only) 3 lbs. (4′-10′)

B-**TEV11**	Terminator Module 120-ohm — Double-height (8.5 by 5″)	**110**	**105**	**100**	2 lbs.

* Add Suffix 02, 04, 06, or 10 to specify cable length.

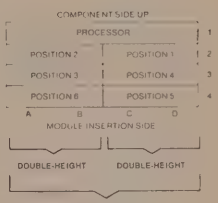
MOUNTING HARDWARE AND ACCESSORIES

Backplane/Card Guide Assembly — H9270

The H9270 backplane/card guide assembly is a prewired LSI-11 structured backplane based on a standard DIGITAL four by four slot configuration. It is designed to be integrated into customer-packaged equipment. For LSI-11 systems that are to be rack mounted, a DDV11-B unit in an H909-C enclosure should be specified — or consider using a PDP-11/03 complete.

Features:

- *Designed to accept one KD11-F Series and up to six I/O or memory modules or one KD11-R and up to four I/O or memory modules.*
- *All LSI-11 bus data, control, and power connectors are pre-wired on the printed circuit backplane to each module location.*
- *Easily implemented, priority-structured I/O bus system based upon electrical position along the LSI-11 bus. Device priority levels established by a daisy-chained grant signal arrangement for interrupt and DMA requests. Placement of modules into the backplane automatically passes the bus grant signal to the next lower-priority device.*
- *Backplane integral with card guide assembly.*
- *Mounting capability in all planes for convenient "bolt-in" installation in a variety of customer designed equipment packages.*
- *Backplane size 11.15 by 2.8 by 11.0".*
- *Can be mounted adjacent to H780-H power supply.*



Module placement in H9270 backplane

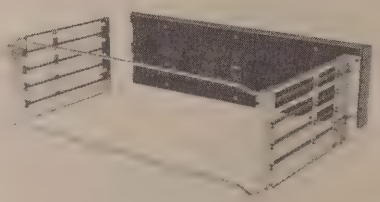
Cat. No.	List	Cat.	Cash	Shipping Weight
B-H9270	$190	$181	$173	6 lbs

Nine by Six Slot Unit — DDV11-B

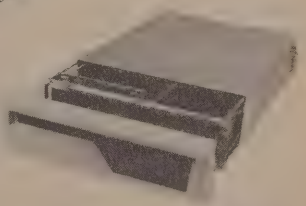
The DDV11-B is an expanded version of the standard LSI-11 backplane for use when either more dedicated LSI-11 compatible logic space or non-LSI-11 compatible space for various other special purpose logic modules or both is required. A nine by four slot section (36 individual module slots) of this system unit is pre-bused specifically for LSI-11 bus signal, power and ground connections. The remaining nine by two slot section (18 slots) is provided with +5V dc, −12V dc and ground power connections only; this leaves the remaining pins free for use with any special logic modules to be used in conjunction with the LSI-11 family of modules and bus requirements.

An optional card cage, Type H0341, is also available to provide protection against physical damage to modules and to serve as a logic card guide. This card cage completely surrounds the slot side of the system unit and is shown in the photograph.

The DDV11-B without the card cage will fit into an H909-C module enclosure, see photo. H0341 is provided with H909-C. Details of this enclosure are covered elsewhere in this catalog.



DDV11-B backplane shown with optional H0341 card cage.



H909-C general purpose enclosure holds one DDV11-B backplane. For details see p. 132 in this catalog.

DIRECT SALES CATALOG

LSI-11, LSI-11/2 AND PDP-11/03

INTRODUCING THE LSI-11/2

FIRST TIME IN DIRECT SALES CATALOG

The LSI-11/2 has the power of the LSI-11 and the PDP-11 family of minicomputers. The same versatile instruction set. The same powerful software. The same interrupt and floating point arithmetic powers. Only its form factor has changed. We've divided our LSI-11 board down the middle, so that CPU and memory are on separate, half-sized boards. What this gives you is a greatly improved form factor, for a new range of design flexibility.

We've taken the LSI-11 CPU and put it on a 5″ by 8½″ board. Now the LSI-11/2 processor and a 32K RAM module together are no bigger than the original LSI-11 with only 4K of memory.

The LSI-11/2 family will open up some new dimensions in microcomputer applications. Especially where space or cost is important.

But size is just the start. Your cost savings can be up to 40%, depending on configuration. Power consumption has been lowered, too. And most systems designed with LSI-11/2 components will run faster.

We're also extending our half-size format to a whole new family of microcomputer options, including memories and interfaces. Imagine: With just two 5″ by 8½″ boards in our new microbackplane, you can have a 16-bit system with up to 32K words RAM, and room left over for your own electronics. That's a 77% reduction in space. And all for only $2266.*

Naturally, our entire half-size family is compatible with our previous products, to expand your options even further.

The LSI-11/2 microcomputer is truly a minicomputer in performance. In fact, no other microcomputer of its size in the world has so much power.

*Cash price for KD11-HD Processor-Memory System.

TECHNICAL DESCRIPTION

CENTRAL PROCESSING UNIT

The KD11-HA is an LSI-11 central processor on a double-size module. The KD11-HA has no on-board RAM. The heart of the KD11-HA is the microcomputer chip set. This chip set includes a control chip, a data chip and two micro-instruction ROM chips. In addition, an optional KEV11 MICROM (see p. 56) that contains EIS/FIS microcode can be installed on the module. Additional logic on the KD11-HA interconnects the chip set with the LSI-11 bus. The KD11-HA is normally the bus master in an LSI-11 system; however, provision has been made for direct memory access operations by another module on the LSI-11 bus. The KD11-HA may be interrupted by requests from external devices using the bus interrupt request.

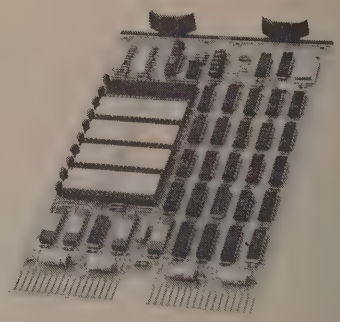
The KD11-HA responds to several control signals on the LSI-11 bus. These control signals initiate power/fail restart microcode sequences, halt mode and EVENT line interrupts.

The KD11-HA does not have microcode refresh for dynamic MOS RAM. Memory must be self-refreshing or DMA refresh (REV11, p. 56) must be used.

The KD11-HA combined with an MSV11-D memory module provides the LSI-11 microcomputer and all the RAM memory needed for a system in two double-size card locations. Note that KD11-HA is not available through this catalog as a "stand alone" item but is available in any one of four memory/CPU configurations.

The KD11-HA, a double-size (5″ by 8.5″) module, should be mounted in the first slot of the first backplane of an LSI-11/2 system. All connections to and from the KD11-HA are via the card edge connectors to the LSI-11 backplane. The KD11-HA must be mounted in the first slot for proper handling of DMA requests and interrupt requests.

The KD11-HA microcode executes all of the PDP-11/40 instruction set. The KEV11 option extends the microcode to respond to all EIS/FIS instructions. The LSI-11 chip set controls fetching of instructions and decoding instructions to determine which operations are to be performed. Both word and byte instructions can be executed. The internal architecture of the chip set makes the KD11-HA particularly well-suited for execution of byte-oriented instructions.



LSI-11 vs LSI-11/2

KD11-HA
Dual Size Module
Double Sided Etch
No On Board Memory
No External Memory Refresh Capability
On Board Power Up Sequencing
Crystal Controlled Clock (not adjustable)

KD11-F
Quad Size Module
Multi Layer Etch
4K On Board Memory
External Memory Refresh Capability
Requires External Sequencing
One Shot Clock (adjustable)

Both have
Same Chip Set
LSI-11 Bus Compatibility
Software Compatibility
Machine Cycle Time (380 ns)

MEMORY MODULES

The MSV11-D is a memory module that can be configured to provide all the random access memory necessary for an LSI-11/2 microcomputer system. The MSV11-D is available with three different capacities: 8K, 16K or 32K, all with 16-bit words. The 8K version is made with 4K x 1 bit MOS RAMs. The 16K and 32K versions are constructed with new 16K x 1 bit RAM chips.

LSI-11/2 systems are normally limited to 28K words of memory. The MSV11-D has a strap that enables the lower 2K of RAM Bank 7. This means that the memory system can be expanded to 30K if no I/O devices are using the address range of 160000 to 170000 (software operating systems do not support system development in this additional 2K range).

The MSV11-D is self refreshing. No bus time is required for the refresh operation. This means that neither microcode nor DMA refresh is necessary. If a bus access occurs while the refresh operation is taking place, the reply signal will be delayed up to 750 ns while the refresh operation takes place. Systems with on-board memory refresh have a throughput of between 4% and 6% higher than systems with conventional bus refresh.

The MSV11-D, coupled together with the KD11-HA processor module, provides both the processor and up to 32K of RAM in two double-sized card locations.

The MSV11-D MOS RAM double-sized (5″ x 8.5″) module can be mounted in any LSI-11 backplane position. Power distribution on the MSV11-D has been partitioned to allow separate power supplied (+5V and +12V) for memory and refresh logic. When desired, a second power supply can be connected to these extra power leads to provide power for the memory during power fail conditions. See p. 51 for specifications on the MSV11-D Series of memory modules.

One configuration of processor-memory KD11-HU includes 256 x 16-bit RAM and sockets for up to 4K x 16-bit UV PROM memory chips. This configuration is intended for application in dedicated controllers where memory volatility cannot be tolerated.

OPTIONAL INTERFACES

There is a variety of various optional modules that can be added to the LSI-11/2 systems. These include IBV11-A IEEE Instrument Bus Interface, MRV11-BA 4K UV PROM board, MRV11-AA 4K PROM board, DRV11 16-bit parallel interface, DCK11-AC CHIPKIT foundation module, REV11-A module (memory refresh and termination functions are not required for LSI-11/2 systems contained on one microbackplane), KPV11-A power sequencer/line clock module (see below under Power Considerations), and the DLV11 single-line serial interface. These optional modules are described in detail later in this section.

RXV11 DUAL FLOPPY DISK SYSTEM

The RXV11 Dual Floppy Disk System is a low cost, random access, mass memory device that stores data in fixed-length blocks on preformatted flexible diskettes. Each drive is capable of storing up to 256K 8-bit bytes of data. Each floppy disk system includes an RX01 floppy disk drive, a 15-foot interface cable, and an RXV11 interface that plugs into the LSI-11/2, LSI-11 or PDP-11/03 system backplane.

NEW FOUR-LINE SERIAL LINE INTERFACE

The DLV11-J is a dual height module that implements four independent asynchronous serial interfaces to the LSI-11 bus. Besides EIA RS-422 and RS-423 (backward compatible with RS-232C) drive levels for receive and transmit data, the DLV11-J also has 20 mA capability with reader run using an externally mounted option DLV11-KA. The module is intended to allow system configurations to mix asynchronous serial terminals with other peripherals, all connected to the same DLV11-J module. For further details on DLV11-J and DLV11-KA see p. 53.

POWER SUPPLY CONSIDERATIONS

Power requirements for the LSI-11/2 depend on the number of memory boards used in the configuration. The central processor requires +5V ±5% at 1A (typ) and +12V ±3% at .22A (typ.) Each memory module requires +5 ±5% at 1.7A (typ) and +12V ±3% at .4A (typ). Any commercially available power supply which meets these requirements can be used. Note that a KPV11 Power Sequence module is not required for power-up (as it is with the LSI-11 family) but if an orderly system shutdown is necessary on power failure then the KPV11 module is required.

digital

DIRECT SALES CATALOG

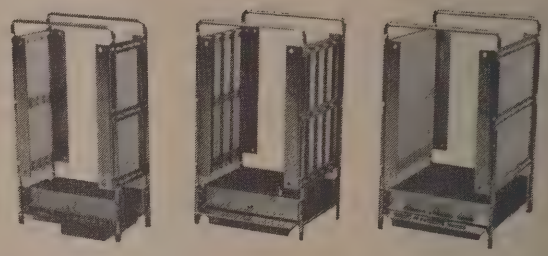
LSI-11, LSI-11/2 AND PDP-11/03

A NEW, COMPACT BACKPLANE ASSEMBLY — H9281

- *Configurations of 2 x 4, 2 x 8, and 2 x 12*
- *Bus lines prewired to each module location*
- *Easily implemented priority structure*
- *Built-in terminator in backplane*
- *Integral card guide assembly, rugged and lightweight*
- *Fast-on tabs for power connection*
- *Supports battery back-up*

The key to the LSI-11/2 family is the LSI-11 bus, completely contained in the backplane. This new backplane reflects the form factor of the LSI-11/2 family, and can help make system configuration fast and easy.

The LSI-11 bus provides a vectored interrupt I/O system with priority based on device position along the bus. Since each module connected to the bus receives the same set of interface signal lines, you simply plug memory and interface modules into any desired location in the backplane.



Three sizes of backplane with card cage assemblies are available. The outside dimensions of the three styles are as follows: 2 x 4 size, 10.8″ high by 5.75″ wide by 3″ deep; 2 x 8 size, 10.8″ high by 5.75″ wide by 6″ deep; and 2 x 12 size, 10.8″ high by 5.75″ wide by 8″ deep.

The new backplane comes in three sizes to accommodate four, eight, or twelve modules, see illustrations.

Power Supply — H780-H

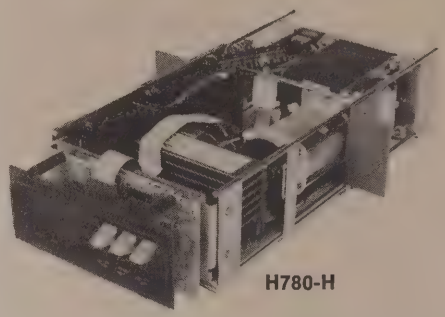
The H-780-H power supply provides the voltage levels (+5 and +12V dc) required by LSI-11 and LSI-11/2 microcomputer modules. Additionally, control functions such as power fail/restart sequences and line-time clock (LTC) generation are included. These latter functions are essential for the LSI-11 and LSI-11/2 system and if the H780-H power supply is not used then Option KPV11 or equivalent must be incorporated in the system, see below.

The power output of the H780-H is adequate to handle a fully implemented H9270 backplane, H9281, (or the equivalent). The individual power requirements of each LSI-11 or LSI-11/2 module option included in the system should be totalled to ensure proper operation.

The H780-H includes a 12″ power cable, terminated with a 6-lug connector strip that mates with the backplane's power terminal block and a 10″ bus signal cable that mates with the backplane's connector pins. A connector block on the rear of the H780-H is provided for connection to a primary power source. A line fuse and On/Off switch on the rear of the option provide overload protection and primary power control, respectively.

Features:

- *+5V ±4%, 18A (max.) and +12V ±3%, 3.5A (max.); combined dc power must not exceed 120W.*
- *Overcurrent/Short Circuit Protection — Output voltages return to normal after removal of overload or short. Current limited to approximately 1.2 times the required max. rating.*
- *Overvoltage Protection — +5V limited to +6.3V (approximately); +12V limited to +15V (approximately).*
- *Dual Primary Power Configuration — Can be connected for nominal 115V, 60 Hz or 230V, 50 Hz input power.*
- *Line Time Clock — A bus-compatible signal is generated by the power supply for the event (line time clock) interrupt input to the processor. This signal is either 50 or 60 Hz, depending upon primary power line frequency input to the power supply.*



H780-H

- *Fans — Built-in fans provide cooling for the power supply and LSI-11 modules contained in an adjacent H9270 backplane.*
- *Power Fail/Automatic Restart — Fault detection and status circuits monitor ac and dc voltages and generate bus-compatible BPOK H and BDCOK H signals (respectively) to inform the LSI-11 or LSI-11/2 system modules of power supply status. Automatic power signal sequencing is provided.*
- *Master Console — Console includes three switches (dc ON-OFF, HALT/ENABLE, and LTC ON-OFF) and three indicators (RUN, dc ON, spare).*
- *Backplane signals: BPOK H, BDCOK H, BEVNT L, BHALT L, SRUN L.*
- *Slave Power Supply Control — H780-H can control a slave power supply.*

The H780-H measures 5½″ wide by 3½″ high by 14⅝″ long. It can be mounted adjacent to the H9270 backplane card cage assembly, but not to the H9281 housings.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**H780-H**	**$700**	**$665**	**$637**	15 lbs.

Power Controller/Sequencer — KPV11

Unless an H780-H power supply is used, the KPV11 option (or equivalent) must be incorporated in an LSI-11 or LSI-11/2 system for power fail/restart sequencing and to provide a Line Time Clock (LTC) generator for the system. There are two cataloged models: KPV11-A, and KPV11-B. They differ in that -A has no termination resistors so cannot be used as an LSI-11 or LSI-11/2 bus terminator. -B provides 120-ohm termination. Note that the -B module must be mounted in the backplane immediately following the last option module for the termination function to work.

The KPV11-A module can be mounted remote from the backplane and interconnected by an optional 70-12754 cable that plugs into the module and the backplane. No program control of the LTC function is possible with a remote installation, however.

An optional console can be added to the KPV11 to provide indicators and switches. The switches are dc ON/OFF, HALT/ENABLE, LTC ON/OFF. The indicators are RUN, dc ON, and a spare. The console is ordered by three catalog numbers: 54-11808 pc board assembly (includes switches and LED indicators), 70-11656 bezel, and 70-08612-4A console signal/power cable. Order by all three numbers.

AC power to this option must be provided via a center-tapped transformer, 24V ac user supplied. This ac input provides the dc power for the option, the 50 Hz or 60 Hz reference for the LTC function and is the power fail monitor signal for the power signal sequence circuit. An external clock frequency can be used as the LTC reference if need be. Note that the KPV11 is **not** a power supply. Suitable dc power (+5V and +12V) for the LSI-11 or LSI-11/2 system must be provided by the system user.

The KPV11 module is a double-height (8.5 by 5″) pc board.

LSI-11, LSI-11/2 AND PDP-11/03

EXTENSION MEMORY MODULES*

4K RAM MOS MEMORY MODULE — MSV11-B [11] [—] [11/03] **

A double-height (8.5 by 5″) read/write memory module utilizing dynamic MOS semiconductor memory devices, the module capacity is 4096 words of 16-bits, with memory-select circuitry for operation on 4K address boundaries. Dynamic memory refresh must be performed by microcode on the basic microcomputer module (hence, not easily compatible with LSI-11/2). If the interrupt latency associated with CPU microcode refresh cycling is undesirable an external refresh option (REV11-A or -C) implemented on an 8.5 by 5″ (double-height) board can be ordered. The LSI-11 CPU KD11-F or the PDP-11/03-EA microcomputer can handle up to seven of these MSV11-B memory modules (32K words). Power requirements for MSV11-B are +5V ±5% at 0.56A (1.12A max.) and +12V ±3% at 0.26A (0.58A max.). Voltage levels are identical to those for the basic microcomputer modules.

B-MSV11-B	$625	$257	$246	2 lbs.

16K RAM MOS MEMORY MODULE — MSV11-CD [11] [—] [11/03]

A quad-height (8.5 by 10″) read/write memory module utilizing dynamic MOS semiconductor memory devices, the module capacity is 16K words of 16 bits with memory-select circuitry for operation on 4K address boundaries. Dynamic memory refresh is performed automatically every 25 microseconds (approximately) by circuitry on the memory module. If the memory is accessed during this refresh cycle, the cycle continues and a delay of 750 nanoseconds (max.) may be encountered before the I/O transaction is completed. Power requirements are +5V ±5% at 1A (2A max.) and +12V ±5% at 0.54A (0.56A max.). Voltage levels are the same as those required by the basic microcomputer modules.

B-MSV11-CD	$1375	$1306	$1251	5 lbs.

4K PROM MEMORY — MRV11-AA [11] [11/2] [11/03]

Having a double-height (8.5 by 5″) module size, this user programmable, read-only memory utilizes either 256 by 4-bit or 512 by 4-bit fusible link-semiconductor devices (which must be ordered separately). The module's maximum capacity is 2048 or 4096 words of 16-bits (depending upon which device is used), and is expandable in 256 or 512 16-bit word increments (requires 4 chips per increment). This module is configured with 32 sockets for mounting memory IC devices of the user's choice. PROM chips (MRV11-AC, see right) can be supplied as an option. Board-mounted jumpers enable selection of the module's address. Power requirements are +5, ±5% at either 0.2A (0.4A max.) with no memory devices installed or 2.8A (4.1A max.) with 4K implemented.

B-MRV11-AC	$40	$38	$36	.25 lbs.

4K CORE MEMORY MODULE — MMV11-A [11] [—] [11/03]

Included in this catalog to expand existing core-based systems (MOS memories are recommended for new systems), the MMV11-A is a quad-size (8.5 by 10″) double width read/write memory module containing 4096 words of 16-bits, with memory address selection circuitry for starting operation on any 4K boundary. Core memory provides non-volatile read/write storage for applications requiring protection against power losses.

Power requirements are +5V ±5% at 3A (7A max.) and +12V ±3% at 0.2A (0.6A max.). Voltage levels are identical to those required by the basic microcomputer modules.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-MMV11-A	$990	$941	$901	10 lbs.

* A comprehensive user's manual is provided with each memory option ordered.

[11] [11/02] [11/03] **

**Because some modules are quad height boards, they will not fit into the LSI-11/2 double height backplane. Additionally some memory modules do not have onboard memory refresh.

The bar next to each heading indicates which module applies to which microcomputer family.

EXTENSION MEMORY MODULES (Cont'd)

PROM-RAM MEMORY — MRV11-BA [11] [11/2] [11/03]

This option is packaged as a double-height (8.5 by 5″) pc board. MRV11-BA comprises a 256-word by 16-bit MOS random access memory (RAM) and a 4K by 16-bit PROM memory implemented via eight sockets designated to hold up to eight 1K by 8-bit PROM chips. The PROM chips can either be industry-standard such as Intel 8708, or DIGITAL MRV11-BC chips (see below) can be ordered. The MRV11-BC chips are erasable by exposure to high intensity ultraviolet light and therefore can be reprogrammed.

The RAM can be used as scratch pad or stack memory by system software. This memory is volatile and is lost when power is removed. The RAM memory is refreshed by local circuitry on the MRV11-BA module. The PROM memory is non-volatile. Both PROM and RAM address space can be independently configured by customer placed jumpers. Power requirements are +5V dc, ±5% at 0.58A (0.67A max.) and +12V dc ±5% at .34A (0.41A max.) without any PROMs installed. The current values increase to .62A (0.744A max.) and 0.5A (0.6A max.) respectively with eight MRV11-BC PROMs installed. The voltage levels are compatible with the other microcomputer modules. The −5V dc required for the PROMs is derived via a "charge-pump" circuit on the MRV11-BA module.

Software is available to convert absolute loader format programs into listing and paper tapes in PROM content format (see elsewhere in this section).

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**MRV11-BA**	**$325**	**$309**	**$296**	3 lbs.

UV PROM CHIPS — MRV11-BC

These PROM chips plug into sockets on the MRV11-BA memory module. Each MRV11-BC PROM is one IC chip that provides 1024 (1K) words by 8-bits of memory. UV PROM chips are erased by high intensity ultra-violet light focussed through a clear quartz window on each chip. Two chips are required to provide 1K of 16-bit memory, thus eight chips implement a full 4K by 16-bit memory.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**MRV11-BC**	**$100**	**$95**	**$91**	1 lb.

8K-32K RAM MOS MEMORY MODULE MSV11-D — DESIGNED FOR LSI-11/2

The MSV11-D is a memory module that can be configured to provide all the random access memory necessary for an LSI-11 microcomputer system. The MSV11-D is available with three different capacities: 8K, 16K or 32K, all with 16-bit words. The 8K version made with 4K x 1 bit MOS RAMs. The 16K and 32K versions are constructed with new 16K x 1 bit RAM chips.

LSI-11 systems are normally limited to 28K words of memory. The MSV11-D has a strap that enables the lower 2K of RAM Bank 7. This means that the memory system can be expanded to 30K if no I/O devices are using the address range of 160000 to 170000 (software operating systems do not support system development in this additional 2K range).

The MSV11-D is self refreshing. No bus time is required for the refresh operation. This means that neither microcode nor DMA refresh is necessary. If a bus access occurs while the refresh operation is taking place, the reply signal will be delayed up to 750 ns while the refresh operation takes place. Systems with on-board memory refresh have a throughput of between 4% and 6% higher than systems with conventional bus refresh.

The MSV11-D is a double size module.

SPECIFICATIONS

Power Requirements

Model	Supply Voltage	Operating Power Typical	Maximum	Standby Power Typical	Maximum
MSV11-DC (16K)	+5V System Power	1.7A, 8.5W	1.9A, 9.5W	1.7A, 8.5W	1.9A, 9.5W

DIRECT SALES CATALOG

LSI-11, LSI-11/2 AND PDP-11/03

INPUT/OUTPUT INTERFACES

LSI-11, LSI-11/2 and PDP-11/03 interface options permit interfacing most peripheral devices to the bus with ease. Not all interface options apply to all systems. The coded boxes [11] [11/2] [11/03] beside each option title shows those systems to which the option can be applied.

PARALLEL LINE UNIT — DRV11 [11] [11/2] [11/03]

This unit is a general-purpose, 16-bit parallel interface between the LSI-11 or LSI-11/2 bus and the user's peripheral device.

Features:

- *16 diode-clamped data input lines.*
- *16 latched output lines.*
- *16-bit word or 8-bit byte data transfers.*
- *Complete device address decoding user-assigned.*
- *Bus interface and control logic for interrupt processing and vectored addressing of interrupt service routines.*
- *Interrupt priority determined by electrical position along the bus.*
- *Control/status registers (CSR) compatible with PDP-11 software routines. CSR and receiver data buffer registers directly accessed via processor instructions.*
- *Plug, signal, and program compatible with PDP-11 DR11-C.*
- *Four control lines available to the peripheral device for output data ready, output data accepted, input data ready, and input data accepted logic operations.*
- *Can be used with TTL or DTL logic-compatible devices.*
- *Maximum data transfer rate of 90K words per second under program control.*
- *Maximum drive capability of 25 feet of cable.*
- *Two 40-pin H854 I/O connectors mounted on module.*
- *Board size is double-height (8.5 by 5″).*
- *Power requirements are +5V dc ±5% at 0.85A (1.3A max.).*
- *Recommended interface cables are two BC08R ,or two BC04Z, or two BC07D. Longest cable permitted is 25 feet.*

SERIAL LINE UNITS — DLV11, DLV11-E, DLV11-F [11] [11/2] [11/03]

The DLV11, DLV11-E and DLV11-F are asynchronous line interface modules that interface the LSI-11 bus to any of several standard types of serial communications lines. The modules receive serial data from peripheral devices, assemble it into parallel data, and transfer it to the LSI-11 bus. They accept data from the LSI-11 bus, convert it into serial data, and transmit it to the peripheral devices. The modules differ in that DLV11-E offers full modem control, whereas DLV11 and DLV11-F support either 20 mA current loop or EIA-standard lines, but do not include modem control. The table summarizes the similarities and differences of each unit. All units have the following features:

- *Jumper- or program-selectable crystal-controlled baud rates: 50, 75, 110, 134.5, 150, 300, 600, 1200, 1800, 2000, 3600, 4800, 7200 and 9600. (No program select on DLV11.)*
- *Provisions for user-supplied external clock inputs for baud rate control.*
- *Jumper-selectable parity and data bit formats.*
- *LSI-11 bus interface and control logic for interrupt processing and vectored addressing of interrupt service routines.*
- *Control, status, and data buffer registers directly accessible via processor instructions.*
- *Program and peripheral connector plug compatible with the PDP-11 DL11 series of asynchronous line interface modules.*
- *All units are double size modules.*

INPUT/OUTPUT INTERFACES (Cont'd)

INTERFACE FOUNDATION MODULE — DRV11-P [11] [—] [11/03]

The DRV11-P is a versatile wire wrap module that contains the bus interface logic for operation with the LSI-11 or PDP-11/03 system and provides adequate board area for mounting and connecting integrated circuits (IC's) or discrete components. Because the bus interface logic is included, the module can be efficiently configured by the user to satisfy a variety of device interface logic applications.

A 40-pin connector, H854, conveniently mounted at the board edge, facilitates the connection to a device through several cable assembly types available from DIGITAL. See p. 56. Except for the bus interface connections, all signals and voltages are terminated to wire wrap pins for user connections. The bus control logic is provided with wire wrap test points for monitoring the internal signals. The test points are spaced at 0.1 in. between pins to allow a 40-pin connector to be inserted over the wire wrap pins for automated test functions.

Approximately ⅔ of the surface area on the module consists of plated-through holes, each connected to a wire wrap pin. The user can mount three different types of dual-in-line IC's or a variety of discrete components into the holes and connect the proper voltages and signals by wire wrapping leads on the board. The DRV11-P module can be inserted into any one of the available interface option locations of the LSI-11, PDP-11/03 backplane, or PDP-11/03 backplane extender unit. The module is quad-height (8.5 by 10″). Refer to the LSI-11 User's Manual supplied free with each order that calls for a basic processor-memory configuration for detailed installation information.

Recommended cables to be used with this module are BC07D, BC08R, and BC04Z. See p. 56.

Power requirements are +5V dc ±5% at 1A (not including user logic).

See Chip Kit Section for alternative Interface Foundation Modules, p. 58.

B-**DRV11-P**	**$275**	**$261**	**$250**	3 lbs.

SERIAL LINE UNIT — DLV11-J [11] [11/2] [11/03]

The DLV11-J is a dual height module that implements four independent asynchronous serial interfaces to the LSI-11 bus. Besides EIA RS-422 and RS-423 (backward compatible with RS-232C) drive levels for receive and transmit data, the DLV11-J also has 20 mA capability with reader run using an externally mounted option DLV11-KA. The module is intended to allow system configurations to mix asynchronous serial terminals with other peripherals.

Each of the four serial channels has four registers which are defined like those of the DL11. The 4 banks of registers of the 4 channels are consecutive and can be positioned in the I/O page using wire-wrap jumpers. Exception: The last channel may be separately configured as the console device.

The DLV11-KA EIA to 20 mA in-line converter includes a 3 foot cable to connect to the DLV11-J. The standard DEC 20 mA cable or Teletype® cable connects to one side of the DVL11-KA which is housed in a 1½″ high by 3″ wide by 4″ deep mounting box. DLV11-KA also provides support for a 110 baud data rate thus adding this capability to DLV11-J.

Note that a BC21B-05 Interface Cable has to be ordered for each I/O channel that will be utilized.

SPECIFICATIONS

Baud rates: 38400, 19200, 9600, 4800, 2400, 1200, 600, 300, 150, 110, external clock

Level code: 7 or 8 bits

Stop bits: 1 or 2 bits

Specifications (Cont'd)

Parity checking: None, Odd, Even

Split speed: No

Connectors: 10-pin Berg

Each channel can be set up independently using wire-wrap jumpers. Output drive levels can be individually selected as RS-422 or RS-423.

NOTE: RS-423 is backward compatible with RS-232C.

RS-422 AND RS-423

Electronic Industries Association (EIA) standards RS-422 and RS-423 have been accepted as new international standards for transmission lines between electronic equipment. These new standards offer a considerable performance improvement over traditional EIA RS-232C and current loops.

With RS-232C, the maximum reliable cable length is 50 feet and the maximum frequency is 20K baud. RS-422, on the other hand, has the capability of going all the way up to 4000 feet and a maximum baud rate of 10 megabaud (although not simultaneouly).

The new RS-422 and RS-423 specifications define the characteristics of the transmitters and receivers used to drive the transmission line as well as the characteristics of the transmission line itself. The receivers and cables used for both standards are identical, but the transmitters are different. RS-422 is a differential (balanced) line system which is capable of transmitting data at high baud rates over long distances with the high noise immunity associated with balanced line systems. RS-423 is a single-ended line system which inherently does not have the capability of a differential line.

RS-423 transmitters and receivers are backward compatible with RS-232C transmitters and receivers. This means that an RS-232C transmitter can send data to an RS-423 receiver and vice versa. Since the receivers used for RS-423 are identical to the receivers used for RS-422, it is possible to design systems which will work with existing RS-232C equipment and can then be upgraded (usually via a strapping change) to RS-422. The system performance is, however, that of RS-232C until the upgrade takes place.

DIRECT SALES CATALOG

LSI-11, LSI-11/2 AND PDP-11/03

DIRECT MEMORY ACCESS — DRV11-B [11 | — | 11/03]

The DRV11-B is a general purpose Direct Memory Access (DMA) interface used to transfer data directly between the LSI-11 or PDP-11/03 system memory and an I/O device. The interface is programmed by the processor to move variable length blocks of 16-bit data words to or from specified locations in memory by means of the LSI-11 bus. Once programmed, no processor intervention is required. The DRV11-B can transfer up to 250K, 16-bit words per second and is capable of operating in burst modes, with byte addressing. The control structure also allows read-modify-restore operations.

The interface consists of five registers: Word Count Register (WCR), Bus Address Register (BAR), Control Status Register (CSR), Input Data Buffer Register (IDBR), and Output Data Buffer Register (ODBR). The module also includes bus transceivers and logic for interrupt requests, address control and protocol, and DMA requests.

The DRV11-B contains one switch bank used to assign an appropriate device address to the DMA interface and one switch bank to select an interrupt vector address in the LSI-11 memory where the DMA routine is stored. Two 40-pin connectors, H854, mounted near the edge of the module, facilitate the connection of the I/O device with the DMA, using any two of several cable assemblies available from DIGITAL. The quad-height (8.5 by 10″) module may be inserted into any available slot of the LSI-11 backplane or backplane extenders according to the rules and restrictions as described in the LSI-11 User's Manual supplied free with each order that calls for a basic processor memory configuration.

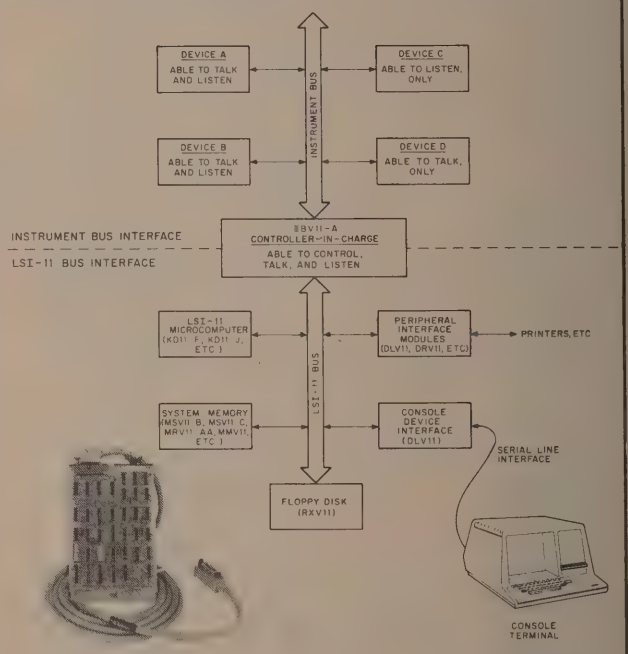
Recommended cables to be used with this module are BC07D, BC08R, or BC04Z. For details of these cables see p. 56.

Power requirements are +5V dc ±5% at 1.9A (nominal).

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**DRV11-B**	**$580**	**$551**	**$528**	5 lbs.

INSTRUMENT BUS — IBV11-A [11 | 11/2 | 11/03]

The instrument bus is contained on a double-height (8.5 by 5″) pc board, and conforms to the IEEE Standard 488-1975 "Digital Interface for Pragrammable Instrumentation."
IEEE 488 standardizes three primary characteristics associated with interfacing instruments such as DVMs, Programmable Power Supplies, Frequency Generators, etc. to computers. These areas are mechanical (connectors and cables), electrical (driver and receiver circuit parameters), and functional (complete definition of each signal line, exact protocol and timing relationship for message transfer, etc.). The bus may have TALKERS (instruments that transmit data) and LISTENERS (instruments that receive data). The IBV11-A can function as a TALKER or LISTENER and as a CONTROLLER initiating a test system by setting ranges, functions or parameters of instruments. Thus, instruments now conforming to IEEE standards may be purchased "off-the-shelf" and integrated into systems with the IBV11-A. See diagram.



Features:

- *PDP-11 software compatible. RT-11, FORTRAN, and BASIC programming.*
- *Bus interface.*
- *Instrument bus compatible with the IEEE 488-1975 standard.*
- *Supports instrument bus cable lengths up to 65.6 feet total.*
- *Fifteen devices (max.) can connect to the instrument bus.*
- *System functions such as: System CONTROLLER, LISTENER (receives data from instruments) and TALKER (transmits data to instruments).*

A 12-foot long interface cable is supplied with each IBV11-A ordered. This cable, BN11A-04, connects the instrument bus option to the first user instrument on the bus. When more than one instrument is to be added to the bus, cable BN01A-04 (12 feet) must be ordered for each additional instrument.

For further details on the instrument bus option request a free copy of the Instrument Bus User's Manual by contacting the Direct Catalog Sales Desk.

ANALOG-TO-DIGITAL CONVERTER — ADV11-A [11 — 11/03]

The ADV11-A is a 12-bit analog-to-digital converter with built-in multiplexer. A sample-and-hold feature makes available 16 channels of A/D single-ended or 8 quasi-differential inputs that will convert an analog voltage from ±5.12V full-scale bipolar. The ADV11-A features a buffer register that allows data from one conversion to be transferred to the processor after a subsequent conversion begins. This buffering optimizes the throughput rate of the converter, permitting the ADV11-A to run at 25 kHz throughput to memory using an LSI-11 system operating under optimum programming with DMA refresh. The auto-zeroing technique — another feature — uses a patented design that measures the sampled signal with respect to the offset of its own internal circuitry and thus effectively cancels out its own offset error contributions to the measurement. There are also three-built-in signals for self-testing. They may be connected through a BC08R-01 maintenance cable (not included) to any channel. A maintenance self-test plug is provided with the option for diagnostic verification. The test signals are two dc levels, and one bipolar triangular waveform. The bipolar triangular wave can be used with diagnostic software to produce a data base for extremely thorough and precise analog linearity testing.

Features:

- *16 single-ended or 8 quasi-differential channels.*
- *Input voltage range is ±5.12V bipolar full scale.*
- *Output resolution is 12-bits (1 part in 4096).*
- *Input impedance is 100 Megohms min.*
- *Input bias current is 40 nA max.*
- *Temperature stability is 5 ppm per °C for gain coefficient and 2 ppm per °C of full scale for offset coefficient.*
- *Power requirements are +5V dc ±5% at 1.75A and +12V dc ±5% at 350 mA.*
- *Quad-height (8.5 by 10") module.*
- *The recommended interface cables are BC04Z, BC08R or BC07D, see p. 56.*

DIGITAL-TO-ANALOG CONVERTER — AAV11-A [11 — 11/03]

The AAV11-A is a four-channel digit-to-analog converter that allows the user a wide variety of output voltage ranges that are jumper selectable. Each 12-bit D/A converter has its own holding register which can be separately addressed and can be written and read in either word or byte format.

Features:

- *Four mutually exclusive D/A converters.*
- *12-bit digital input per converter.*
- *Input binary-coded for unipolar mode, offset binary for bipolar mode.*
- *Single-buffered, word or byte operable, read/write digital storage.*
- *Bipolar output voltage range is ±2.56V ±5.12V or ±10.24V jumper selectable. Factory set for ±5.12V.*
- *Unipolar output voltage is either 0 to +5.12V or 0 to +10.24V jumper selectable.*
- *Resolution is 12-bits (1 part in 4096).*
- *Temperature stability is 10 ppm per °C max. for gain coefficient and 20 ppm per °C max. of full scale for offset coefficient.*
- *Gain accuracy is adjustable.*
- *Linearity is ±½ LSB.*
- *Output impedance is 1 ohm max.*
- *6 mA per converter drive capability.*
- *5 volts per microsec. slew rate.*
- *Power requirements are +5V dc ±5% at 1.5A and +12V dc ±5% at 0.4A.*
- *Quad-height (8.5 by 10") module.*
- *Recommended interface cables are BC04Z, BC08R or BC07D, see p. 56.*

REAL TIME CLOCK — KWV11-A [11 — 11/03]

The KWV11-A is a programmable real-time clock that offers the user several methods of measuring and counting intervals or events from 1 microsecond to 650 seconds. It can also be used to synchronize external equipment. The KWV11-A is a 16-bit clock that will operate in one of four programmable modes and can be selected to operate at one of five crystal-controlled frequencies.

Features:

- *Programmable function modes are: single interval, repeated interval, external event timing, and external event timing from a zero base.*
- *Crystal controlled frequency of 1 MHz, 100 KHz, 10 KHz, 1 KHz, or 100 Hz.*
- *Timing accuracy is .01%.*
- *Power requirements are +5V dc ±5% at 1.75A.*
- *Quad-height (8.5 by 10") module.*

OPERATIONAL OPTIONS — REV11-A, REV11-C [11] [—] [11/03]

- *Memory Refresh*
- *Diagnostic*
- *Bus Termination*

This external refresh module is used when the dynamic RAM memory refresh implemented in the KD11-F basic microcomputer module or PDP-11/03-KA microcomputer microcode is disabled. This option eliminates an interrupt latency which can exist when operating with the microcode refresh functions. Also included are bootstraps for the resident paper tape absolute loader, and CPU and memory diagnostics. A 120-ohm bus termination is included with Option REV11-A only. REV11-A must not be used in systems where other DMA devices are on the I/O bus. Use REV11-C with TEV11 120-ohm terminator module in these applications. See p. 44 for TEV11 information.
Option is a double-height (8.5 by 5″) pc board.

ARITHMETIC FUNCTION PACKAGE — KEV11 [11] [11/2] [11/03]

Extended instruction and floating point instruction. Option KEV11 provides fixed-point multiplication, division, and multiple shifting in single-precision arithmetic, as well as floating-point addition, subtraction, multiplication, and division. Furnished as an IC package, it plugs into a socket in the basic microcomputer modules and PDP-11/03 microcomputers.

MICROCOMPUTER

LSI-11, LSI-11/2 AND PDP-11/03

SOFTWARE

PAPER TAPE SOFTWARE PACKAGE — QJV10-CB [11] [11/2] [11/03]

This package of utility software consists of an Editor, which allows the user to create and modify ASCII source files to be used as input to other system programs; an Assembler, which allows the user to translate assembly language programs into executable machine-coded programs; a Loader, which allows the user to input programs and data from various media into the machine; an On-line Debugging Technique (ODT) Package, which allows the user to debug assembled and linked programs; an Input/Output Executive, which allows the user to control the flow of data to and from devices under program control.

This software package requires 8K of memory and may be loaded using any DIGITAL paper tape reading device by interfacing it to the LSI-11. If you choose to load paper tape using a Teletype®, purchase the LT33-DC from DIGITAL. The LT33-DC is a specially modified ASR-33 which is compatible with DIGITAL specifications, and is plug-compatible with the DLV11 serial interface.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**QJV10-CB**	**$110**	**$105**	**$100**	10 lbs.

® Teletype is registered trademark of Teletype Corp., Skokie, Ill.

PROM FORMATTER PROGRAM — QJV11-CB [11] [11/2] [11/03]

This paper tape software program is used to facilitate the programming of both fusible link (MRV11-AA) and UV-erasable (MRV11-BA) PROM memory options. Before programming these memory options, a thorough understanding of the descriptions contained within the Microcomputer Handbook is advised. The reference manuals accompanying these options should also be studied.

Free copies of the handbook are available for the asking by calling the Catalog Sales Desk.

LSI-11 DOCUMENTATION / DIAGNOSTICS — ZJV01-RB [11] [11/2] [11/03]

One extensive literature package is included (no charge) with each LSI-11 or LSI-11/2 purchase order that includes a processor. This package includes a user's manual, a processor handbook, a configuration and installation guide, a complete set of module schematics, and a set of diagnostics (tapes and program listings).

Additional LSI-11 or LSI-11/2 documentation packages may be purchased if required.

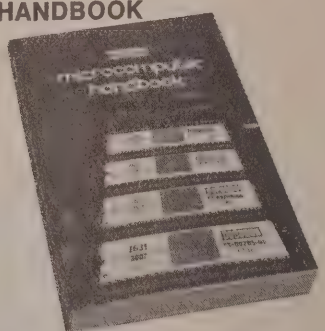
LOGIC HANDBOOK

The Logic Handbook, known as the computer industry's "Bible" on logic design, gives you the technical story on general purpose computer interfacing, various cable configurations, system boxes and enclosures, special purpose interfaces and a host of other compatible equipment.

For almost twenty years, the Logic Handbook has been regarded as the one reference book for customers for the world of interfacing and DEC products. Have your own resident DEC sales and technical consultant — the Logic Handbook!

MICROCOMPUTER HANDBOOK



The Microcomputer Handbook is our answer to the question, "Where can I find the answers to everything I've always wanted to know about the LSI-11 and LSI-11/2 but didn't know where to look." Included are detailed chapters on the processor, options, installation, software, operating systems, peripheral devices, programming, maintenance and much more. The text covers the full range of LSI-11 systems from the LSI-11 and LSI-11/2 board sets to the PDP-11/03 microcomputer to the PDP-11V/03 disk based microcomputer system. Truly, everything you want and need to know of the LSI-11 microcomputer is found between the two covers of this handbook!

DIRECT SALES CATALOG APPLICATION NOTES AND PRODUCT BULLETINS

For the user who requires more complex and technical information on specific products or application ideas, the D.S.C. has a complete line of detailed product bulletins and application notes. These publications will tell you everything you should need to know about the particular product involved.

Dozens of different application notes and product bulletins are available for the asking.

CALL: 800-258-1710 (N.H. Residents 603 - 884-6660) 8:30 am to 5 pm EST.

CHIPKIT — DESIGNERS KITS FOR CUSTOM INTERFACES [11] [11/2] [11/03]

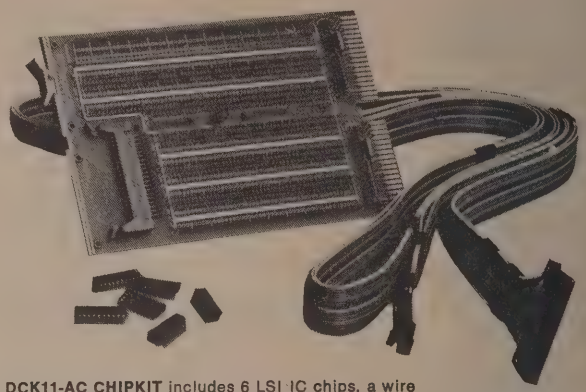
What's a CHIPKIT? DIGITAL has developed proprietary large scale integration IC's for its own use. Certain of these IC's are being offered to LSI-11 and LSI-11/2 users for custom interfacing to the Q-bus. Prior to the introduction of these IC's, a designer of custom input/output or direct memory access (DMA) interfaces had two alternatives: modify standard DIGITAL product or design from scratch. Now, however, a circuit designer can buy, through the Direct Sales Catalog, a third cost effective choice — the CHIPKIT. The kits contain in LSI IC chip form the circuitry necessary for interfacing to the LSI-11 Q-bus. Some CHIPKITS also include a PC wire wrap board and an interface cable.

These LSI IC chips reduce the circuit board area for the bus circuitry. This reduction enables a designer to implement the Q-bus I/O and DMA circuitry on the double height wire wrap board provided with the kit with ample room remaining to incorporate the designer's required special circuitry. This results in backplane space savings, increased system reliability through reduced component count, lowering of system costs and, most importantly, a greater opportunity for customer value — added to the finished product.

Four CHIPKITs are currently available through the Direct Sales Catalog.

DCK11-AC is titled Program Control Bus Interface. It comprises four DC005 Transceiver Chips, one DC004 Protocol Chip, one DC003 Interrupt Chip, a W9512 double height, extended length, single width wire wrap module, a BC07D-10 40-conductor, 10-foot flat ribbon cable having an H856 connector on one end with the other end open ended, and a CHIPKIT Designers Manual. The DCK-11-AC is functionally similar to and a complementary product to the DRV11-P Q-bus Foundation Module described on p. 53. DRV11-P is not LSI -11/2 compatible.

DCK11-AD is titled Direct Memory Access Bus Interface. It comprises all the components listed for the DCK11-AC plus two DC006 Word Count/Bus Address Chips and one DC010 Bus Master Chip. The DCK11-AD is functionally similar to and a complementary product to the DRV11-B Q-bus General Purpose DMA Interface.



DCK11-AC CHIPKIT includes 6 LSI IC chips, a wire wrappable board, and an interface cable.

DCK11-AA is a CHIPKIT that comprises Program Control chips alone. One DCK11-AA contains one DC003 Interrupt Chip, one DC004 Protocol Chip and four DC005 Transceiver Chips.

DCK11-AB is a CHIPKIT that comprises Direct Memory Access chips. A DCK11-AB contains two DC006 Word Count/Bus Address Chips and one DC010 Bus Master Chip as well as the six chips included in DCK11-AA.

Remember that these CHIPKITS provide the basic I/O and DMA circuitry but are not assembled ready-to-plug-in options such as DRV11-P or DRV11-B.

For a description of each chip and the wire wrap board, see below. Ordering information is on p. 60. A detailed application Note is also available. Contact the Direct Sales Catalog Desk for a copy.

Wire Wrappable Module W9512

The W9512 module will accept a variety of IC package types and discrete components. The printed circuit on each board connects the appropriate edge connector pins to the Vcc plane on Side 2 of the board and the ground plane (GND) on Side 1. The remaining edge connector pins terminate to a double row of wire wrap pins for user designated functions. Each module also includes a premounted 40-pin male cable connector to allow an interface cable to be attached to the module logic. The pins of the cable connector are also terminated to a double row of wire wrap pins. Each board contains insulated standoffs to maintain the required clearance between adjacent modules and prevent shorting of wire wrap pins. The wire wrap pins and components are mounted on Side 2 of each module. The majority of the rows of predrilled holes accept IC packages with pin spacings of 0.3″. However, a universal area on the W9512 module is the area which accepts IC packages with standard pin spacings of 0.3″, 0.4″ and 0.6″.

Total IC capacity on the wire wrap module is as follows:
32 14-pin IC's or 27 16-pin IC's, 5 24-pin IC's, 3 40-pin IC's.

These capacities allow one pair of holes between each DIP for mounting additional decoupling capacitors. The W9512 module is supplied without IC sockets. See p. 60 for IC sockets available through the Direct Sales Catalog.

W9512 wire wrappable board is equipped with 40-pin male interface connector.

CHIP DESCRIPTIONS

DC003 INTERRUPT LOGIC

The interrupt chip is an 18-pin, 0.3″ center DIP device that provides the circuits to perform an interrupt transaction on the LSI-11 Q-bus. The device is used in peripheral interfaces and provides two interrupt channels labeled "A" and "B," with the A section at a higher priority than the B section. Bus signals use high impedance input circuits or high drive open collector outputs, which allow the device to directly attach to the LSI-11's bus. The maximum current required from the Vcc supply is 140 mA.

DC004 PROTOCOL LOGIC

The protocol chip is a 20-pin, 0.3″ center DIP device that functions as a register selector, providing the signals necessary to control data flow into and out of up to four word registers (8 bytes). Bus signals can directly attach to the device because receivers and drivers are provided on the chip. An RC delay circuit is provided to slow the response of the peripheral interface to data transfer requests. The circuit is designed such that if tight tolerance is not required, then only an external 1K ±20% resistor is necessary. External RC's can be added to vary the delay. Maximum current required from the Vcc supply is 120 mA.

DC005 TRANSCEIVER LOGIC

The 4-bit transceiver is a 20-pin, 0.3″ center, low-power Schottky device; its primary use is in peripheral device interfaces, functioning as a bidirectional buffer between a data bus and peripheral device logic. In addition to the isolation function, the device also provides a comparison circuit for address selection and a constant generator, useful for interrupt vector addresses. The bus I/O port provides high impedance inputs and high drive (70 mA) open collector outputs to allow direct connection to the LSI-11 data bus structure. On the peripheral device side, a bidirectional port is also provided, with standard TTL inputs and 20 mA three-state drivers. Data on this port is the logical inversion of the data on the bus side. Maximum current required from the Vcc supply is 120 mA.

DC006 WORD COUNT/BUS ADDRESS LOGIC

Designed primarily for use with DMA interfaces, the DC006 chip is a 20-pin, 0.3″ center, low-power Schottky device that consists of two 8-bit binary upcounters, one for word count and another for bus address. Two chips are cascaded for full 16-bit implementation. The Word Count function is a 16-bit read/write register that controls the number of transfers to be made at a time. The Bus Address counter is a 16-bit read/write register used to generate the bus address which specifies the location to or from which the data is to be transferred. Maximum current required from the Vcc supply is 160 mA.

DC010 BUS MASTER LOGIC

The DC010 chip is a 20-pin, 0.3″ center, low-power Schottky device for primary use in DMA peripheral device interfaces using the LSI-11 bus.

This device provides the logic circuitry to perform the hand-shaking operations required to request and to gain control of the system bus. Once bus mastership has been established, this device then generates the required signals to perform a DIN, DOUT or DATIO transfer as specified by control lines to the chip.

The chip uses an external free-running clock and generates the enable and disable clock controls internally.

The chip also has a control line that will allow multiple transfers or only four transfers to take place before giving up bus mastership. Maximum current required from the Vcc supply is 160 mA.

SPECIFICATIONS

Absolute Maximum Ratings:

Supply Voltage (Vcc)	+7V
Operating Temp. (Ta)	+32°F to +158°F (0°C to +70°C)
Storage Temp. (Ts)	−75°F to +257°F (−60°C to +125°C)

Recommended Operating Conditions:

Supply Voltage (Vcc)	4.75V (Min), 5.0V (Norm), 5.25V (Max.)
Supply Current (Vcc)	DC003: 140 mA (Max) DC004, DC005: 120 mA (Max) DC006: 160 mA (Max) DC010: 160 mA (Max)
Free Air Temperature	+32°F to +158°F (0°C to +70°C)
Relative Humidity	10% to 95%, noncondensing

Physical Dimensions:

DC003, 18-pin	0.3″ center
DC004, 20-pin	0.3″ center
DC005, 20-pin	0.3″ center
DC006, 20-pin	0.3″ center
DC010, 20-pin	0.3″ center
W9512 Wire Wrappable Module	Double height, extended length, single width.
BC07D-10 Cable	10′ 40-conductor ribbon cable, with 40-pin (female) mating connector (H856) installed on one end only; prestripped on other end.

See Page 60 for Ordering Information.

IC Sockets — 954, 961, 962

These integrated circuit (IC) sockets provide low-cost, reliable production packaging of 14- or 16-, 24-, and 40-pin dual-in-line package (DIP) integrated circuits (ICs). These low-profile IC sockets are especially useful for limited-production runs of special, user-designed circuitry using blank or wire wrappable module boards (available through the Direct Sales Catalog) which are available without factory-installed IC sockets. The 954 accepts 14- or 16-pin ICs; 10 sockets/package. The 961 accepts 24-pin ICs; 5 sockets/package. The 962 accepts 40-pin ICs; 5 sockets/package.

Design your own LSI-11 bus interface

Contact the Direct Sales Catalog Desk for your copy of CHIPKIT Users Guide. Included in this free, applications-oriented publication (16 pages) are:

- *Logic Diagrams*
- *Bus Interface Diagrams*
- *Wiring Diagrams*
- *Timing Diagrams*
- *Pin/Signal Descriptions*
- *Truth Tables*

Plus more details on each CHIPKIT chip.

WIRE WRAPPABLE MODULES FOR Q-BUS [-11] [-11/2] [-11/03]

DIGITAL's family of Q-bus compatible wire wrappable modules consists of two double height (8.5 by 5″) and two quad height (8.5 by 10″) circuit cards. Note that the quad height boards do not fit LSI-11/2 backplane. One card of each size is equipped with premounted Dual-In-Line (DIP) package low profile sockets. See p. 60 for sockets available through the Direct Sales Catalog. Each board will accept various combinations of DIP assemblies including the more common 14-, 16-, 24-, and 40-pin packages. Various other size DIP assemblies as well as discrete components are easily accommodated. These modules are ideal for design prototyping, limited quantity production runs or design instructional use.

The printed circuit on each board connects the appropriate edge connector pins to the Vcc plane on Side 2 (Component side) of the board and the ground plane (GND) on Side 1. The remaining edge connector pins terminate to a double row of wire wrap pins for user designated functions. Each of the modules also includes a 40-pin male cable connector to allow an interface cable to be attached to the module logic. The pins of the cable connector are also terminated to a double row of wire wrap pins. The quad height module is provided with a space where a second 40-pin cable connector (P/N H854, labeled J2, see below for suitable connector) can be inserted by the user. When this second cable connector is not required, additional IC packages can be installed. Each board contains insulated standoffs to maintain the required clearance between adjacent modules to prevent shorting of wire wrap pins.

The wire wrap pins and components are mounted on Side 2 of each module. The majority of the rows of predrilled holes accept IC packages with pin spacings of 0.3″. However, a universal area on each of the four modules accepts IC packages with standard pins spacings of 0.3″, 0.4″, and 0.6″. See diagram of each board.

MICROCOMPUTER SYSTEMS

PDP-11V03

AS LOW AS $8472

The ultimate number cruncher. The 16 bit, 400+ instruction set PDP-11V03 Microcomputer System. Word or byte processing. PDP-11 software compatibility. A wide choice of software, memory and I/O interface options. A most flexible, adaptable computer system that is currently widely used in a host of laboratory applications — and is making significant inroads into commercial and industrial areas.

The PDP-11V03 is born of the same advanced technology that has made the LSI-11 family the designer's choice for reliability and useability. The PDP-11V03 is software compatible with all other members of the PDP-11 family.

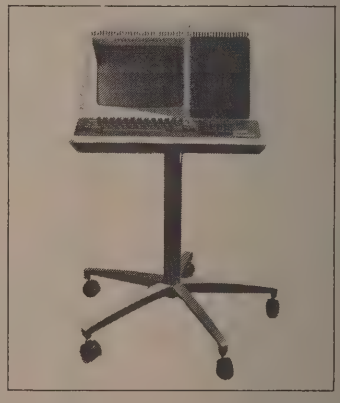
digital PDP-11V03

DIRECT SALES CATALOG

LSI-11 BASED MICROCOMPUTER SYSTEM

PDP-11V03 with LA36 DECwriter II hard copy terminal. The PDP-11/03 microcomputer and an RXV11 dual floppy disk drive are incorporated in an H984 cabinet.

PDP-11V03 with VT52 DECscope Video Terminal. DECscope can be mounted on VTXX-ST Terminal Stand (insert) as described on page 147.



The PDP-11V03 Microcomputer Systems is a complete, fully integrated, assembled and tested computer system. The system is built around the highly successful LSI-11/PDP-11/03 microcomputer of which more than 25,000 have been installed worldwide.

Two basic systems are offered in this catalog. One has an LA36 DECwriter II hard copy terminal, the other a VT52 DECscope video terminal as its interactive operator's terminal. Each basic system includes a PDP-11/03 16-bit microcomputer, 16K of dynamic MOS RAM, a 128K 16-bit RXV11 dual floppy disk drive, and the powerful Real Time operating system software RT-11. The microcomputer and the disk drive are mounted in a roll-about H984 Cabinet (for details of cabinet see p. 130). An optional expansion box (BA11-ME, see p. 44) can be mounted within the cabinet for additional memory and interface options. Complete system documentation and diagnostics are provided. Optional software packages round out the system.

The PDP-11V03 System was developed primarily to bring "full service" computing and data manipulating power to engineering, scientific, medical, and laboratory applications where the wide choice of interface hardware options can best be used. For example, a D/A converter, an IEEE Instrument Bus interface, and a "16 line in, 16 line out" parallel interface are only a few of the options available.

The optional software which includes, among others, BASIC/RT-11, FORTRAN IV/RT-11, and APL-11/RT-11 allows the system to be adapted to many unique applications.

digital PDP-11V03

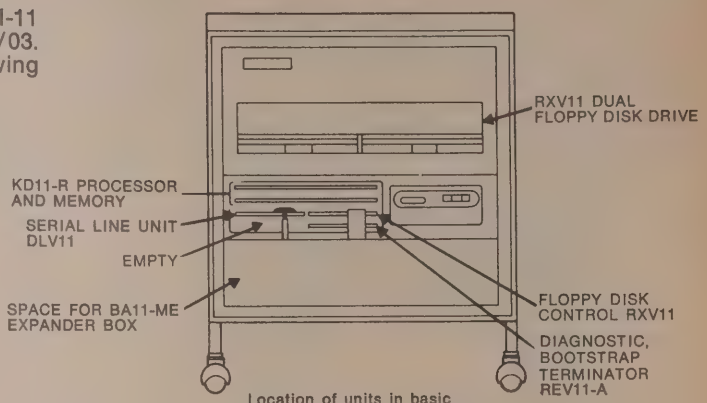
DIRECT SALES CATALOG

MICROCOMPUTER SYSTEMS

PDP-11/03 MICROCOMPUTER

At the heart of the PDP-11V03 System is the LSI-11 based "packaged" microcomputer called PDP-11/03. Each PDP-11/03 microcomputer has the following features standard:

- 16-bit MOS, LSI central processor
- Paralled I/O bus port
- PDP-11/40 instruction set
- DMA transfer rate of 833K words per sec.
- Power fail/auto restart
- Vectored interrupt
- Real Time clock input
- Octal debugging routine in microcode
- ASCII console rountines in microcode
- Microcode bootstrap routine
- Expandable arithmetic capabilities
- 16-bit word or 8-bit byte processing



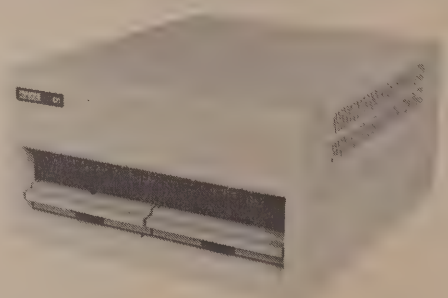
Location of units in basic PDP-11V03 basic configuration

The basic configurations of the system include 16,384 16-bit words (32K 8-bit bytes) of dynamic MOS RAM. The RAM memory can be increased to a maximum of 32K 16-bit words (64K 8-bit bytes) in 4K increments by using Expansion Memory Modules MSV11-B. Or by specifying Expansion Memory Module MSV11-CD (16K RAM) an immediate increase to full 32K capacity is obtained. See System Expansion Diagram page 66. Note that the maximum RAM configuration does not mandate an expansion box.

MASS MEMORY

The system's mass memory is the RXV11 dual floppy disk drive. Each drive of the RXV11 is capable of storing 256, 256 8-bit bytes or 128, 128 16-bit words. The RXV11 is completely integrated into the PDP-11V03 system, having gone through a rigorous system level test procedure to ensure trouble-free operation. The RXV11 has a mean-time-between-failure (MTBF) rating in excess of 3100 hours.

A second RXV11 dual floppy disk drive can be added to the system to expand the mass memory to 1,025,024 8-bit bytes (512, 512 16-bit words). The RXV11 unit can be ordered through this catalog. Note, however, that the drive, which is totally enclosed, cannot mount in the supplied PDP-11V03 cabinet so must be placed either on top of the cabinet or on a stand close by.



RXV11 dual floppy disk drive system comprises the RX01 dual floppy disk drive plus interfacing for the PDP-11V03 system

STANDARD INTERACTIVE TERMINALS

The basic system can be ordered with either the 30-cps hard copy LA36 DECwriter II terminal, or a 1920-character screen VT52 DECscope Video Terminal. In either configuration the terminals interface with a serial line unit (supplied) via a 20 mA current loop. A 15-foot interface cable and a 9-foot power cord are provided for site flexibility. Both the LA36 and VT52 are explained in detail in the Terminals Section of this catalog.

SUPPLIED SOFTWARE

The software operating system which comes standard with all models of the PDP-11V03 offered through the Direct Sales Catalog is DIGITAL's powerful RT-11 disk operating system designed for interactive program development and on-line, real-time applications. In a foreground/background environment, the user can run a real-time application in the foreground while interactively developing a program or running a batch stream in the background. RT-11 includes two compatible monitors and a variety of program development and system utilities. As options, RT-11 supports FOCAL, FORTRAN IV and BASIC languages. BASIC is offered in a single-user or multi-user version. RT-11 has provision for an operator's console (interactive terminal) and the RXV11 disk system. RT-11 also supports a highspeed printer, LAV11, available through this catalog. Other software options listed under Optional Software.

RT-11 is a particularly easy-to-use system and yet it provides a sophisticated set of programming tools, particularly for the lab application environment. The system is completely device-independent and configuration independent. Programs can be directed to use a specific peripheral at run-time. The system can run unmodified on a variety of memory configurations.

digital PDP-11V03

DIRECT SALES CATALOG

SYSTEM EXPANSION

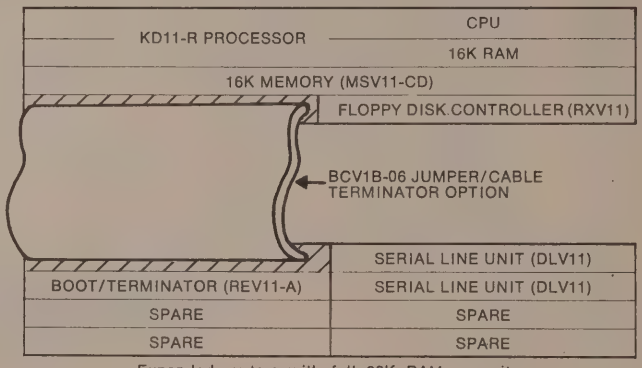
Device priority is determined by the position of the module in the computer backplane. A signal passes through each module in turn forming a "daisy chain" through them. The closer a module is to the processor, the higher its hardware priority in the daisy chain. The priority chaining scheme requires that there be no empty slots between modules, as this would break the chain.

The REV11-A bootstrap and terminator module must be the last module (lowest priority) after all options are installed. When installing optional modules the user must remove the REV11-A module, install the options in consecutive order of slot positions, and then install the REV11-A module in the next slot position available.

The REV11-A is a direct memory access (DMA) module. The use of other DMA devices that are installed on the I/O bus between the REV11-A and the processor module will likely result in ineffective DMA refresh and loss of memory data. When DMA devices are to be used in addition to the REV11 option, use the REV11-C (no termination resistors) and the TEV11; install the REV11-C as the highest priority DMA device and the TEV11 as the 120 Ω bus termination in the last option location. See LSI-11 section.

KD11-R PROCESSOR	CPU
	16K RAM
SERIAL LINE UNIT (DLV11)	FLOPPY DISK CONTROLLER (RXV11)
SPARE	BOOT/TERMINATOR (REV11-A)

Basic PDP-11/03 configuration for PDP-11V03 system.



Expanded system with full 32K RAM capacity and one optional Serial Line Unit.

EXPANDING THE SYSTEM

The basic PDP-11V03 system can be expanded in 9 ways. An expander box may be required. Not listed in order of importance they are:

1) Add more RAM
2) Add PROM/ROM
3) Add a second mass memory (RXV11)
4) Add a high speed (180 cps) printer
5) Add hard copy terminals
6) Add video terminals
7) Add optional interface hardware such as A/D and D/A converters
8) Add optional software
9) Add capability to processor

1 **Add More RAM:** By ordering MSV11-B modules 4K by 16-bit MOS read/write memory can be incrementally added. Or by specifying MSV11-CD a full 16K by 16-bit MOS memory is ordered. MSV11-B should not be used as a "bank" zero if it is desired to "power up" to an active program. Note that once a 4K unit is ordered the user is committed to expanding in 4K increments to the maximum expansion of 32K. If the system will ultimately in the short term be expanded to full memory capacity it is recommended that the MSV11-CD module be ordered. See LSI-11 Section for a full description of MSV11-B and -CD.

2 **Add PROM/ROM:** By ordering MRV11-AA PROM memory with up to 16 MRV11-AC PROM 512 by 4-bit chips, PROM memory can total up to 4096 words of 16-bits. See LSI-11 Section for other combinations.

3 **Add an RXV11 disk drive:** The RT-11 software can support a second RXV11 dual floppy disk drive thus enabling the system to have a mass memory of 1 million 8-bit bytes. The additional drive can be purchased through this catalog and comes complete with all cables and LSI-11 bus interface. Physically the second drive must be mounted externally to the system cabinet.

4 **Add a high-speed printer:** An on-site parallel-interfacing printer can be added by ordering the LAV11 DECprinter I. This is an LA180 DECprinter that is supplied with a controller module and an interface cable.

An LA180 can be used in a serial mode if a serial interface (DLV11 family or the equivalent) is available. Note that in the serial mode LA180 must be equipped with the optional EIA interface (LAXX-NW) or the 20 mA current loop interface (LAXX-NX) respectively. If the LA180 is EIA equipped and is located within 34 feet of the PDP-11V03, then Null Modem cable BC03M-25 is required. This distance can be extended by requesting special length BC03M cables. For cables longer than 25 ft. there will be an additional charge. Contact Catalog Sales Desk for details. If the printer is remote and is interfaced via a modem, then a BC05D-10 EIA cable must be ordered.

If the LA180 is 20 mA interface equipped the same rules as the EIA equipped LA180 apply except that cable BC03L-25 should be ordered in place of the BC03M-25 and cable BC05C-10 should be ordered instead of BC05D-10.

DECprinter I
High-speed line printer **LAV11** has a handsome styling to blend in with office or computer room decor.

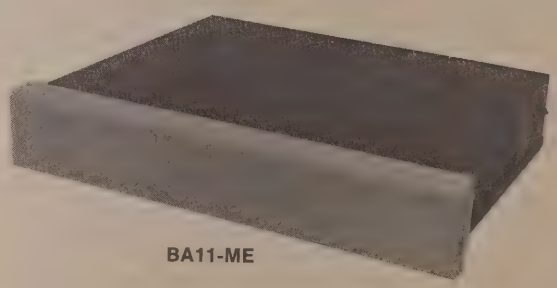
5 **Add hard copy terminals:** The PDP-11V03 system can support a total of four printers or interactive terminals simultaneously. The recommended hard copy terminal for the system is the LA36 DECwriter II or the LS120 DECwriter III both of which are available through this catalog.

Either terminal provides keyboard input and impact printing interfacing via standard serial interfaces (DLV11 family or equivalent). The serial interfaces are available through the Direct Sales Catalog. The LA36 must be equipped with either a 20 mA interface or an EIA interface. The LS120 comes equipped with an EIA interface although a 20 mA interface (LAXX-RN) is available.

LS120 prints at up to 180 cps, LA36 has a throughput of 30 cps. If a Receive-Only terminal is required then the LA35 DECwriter II 30-cps hard copy terminal can be specified. See the Terminal Section for details on all these terminals. Note that interface cabling as described above (Item 4) for the LA180 must also be ordered for LS120 or LA35/36.

EXPANDER BOX

The basic system has two slot positions available for adding options. By adding an expander box the user has six additional slot positions available for a total of eight. The BA11-ME is used with 115 Vac systems. In addition to the expander box, a BCV1B-06 jumper cable/terminator assembly is required to connect the existing backplane to the backplane in the expander box. See LSI-11 section for details of BA11-ME.



BA11-ME

Cat. No.	Description	Cash Price
B-**BA11-ME**	An expansion box that includes a backplane and a power supply for use in a 115 Vac system.	**$910**
B-**BCV1B-06**	The jumper cable/terminator assembly consists of two modules interconnected by a 6-foot, 40 conductor (H865-to-H856) connector cable.	**264**

digital PDP-11V03

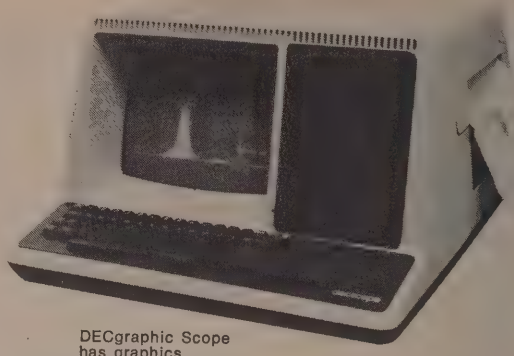
DIRECT SALES CATALOG

6 Add video terminals: Any VT52 DECscope or VT55 DECgraphic Scope can be used to expand the interactive capabilities of the system (upper limit is four in combination with other terminal/printers). Both VT52 and VT55 require serial line interfaces (DLV11 or equivalent) and cabling as outlined for the LA180 in Item 4 above.

VT52 and VT55 each display 1920 characters (24 lines by 80 characters) of the full ASCII character set. A numeric and function keypad aids data entry and cursor control. VT55 has a graphics mode that allows the user to display data as bar graphs or curves either in point plot or histogram (shaded) format. Two graphs, each of up to 512 data points, can be displayed simultaneously. The VT55 can also be ordered with an integral copier to give a permanent record of the displayed data. For details on the VT52 and VT55 see the Terminals Section in this catalog.

7 Add interface hardware: Serial line units, parallel line units, Bus foundation modules, CHIP-KITS, IEEE Instrument Bus interface modules, A/D converters, and D/A converters can all be added to the basic system. These options are briefly described in the Interface Hardware box in this section and fully described in the LSI-11 section of this catalog.

8 Add Optional Software: A long list of optional software is available to complement the operating software RT-11. Details of the software can be obtained by contacting the Direct Sales Catalog Desk. See "Optional Software" box for program descriptions and costs. Note all software brought through the Direct Sales Catalog is supplied "As Is" so does not have full maintenance support.



DECgraphic Scope has graphics capability and an optional hard copy output

9 Add capability to processor: The processor has a prewired 40-pin socket mounted on its printed circuit board that is reserved for the KEV11 option. This option increases the processor's capability to handle the Extended Instruction Set (EIS) and the Floating Point Instruction Set (FIS). The option is a 40-pin integrated circuit chip which is installed on the processor board and does not require any option position slots space on the backplane. See the LSI-11 Section for details. Cash price for the KEV11 is $173.

OPTIONAL SOFTWARE

Cat. No.	Description	List	Cat.	Cash	Shipping Weight
B-**QJ813-CY**	RT-11/FORTRAN IV V2, Binary, Floppy	$ 610	$ 580	$ 555	4 lbs.

INTERFACE HARDWARE

Serial Line Unit

Each additional device that has serial data requires a DLV11 Serial Interface module and either a BC05M-04 cable or a BC03L-05 cable. The cable is connected from the module and mounted in a slot on the connector panel located on the back of the cabinet.

INTERFACE HARDWARE OPTIONS

For Details see LSI-11 Section.

Cat. No.	Description	Cash Price
B-**DLV11**	An interface module for a 20 mA current loop service or an EIA-compatible device. The DLV11 contains selectable baud rates from 50 to 9600 Baud.	$228
B-**BC05M-04**	An interface cable to connect the DLV11 module through a Mate-N-Lok connector requiring a 20 mA current loop.	42
B-**BC03L-05**	An interface cable to connect the DLV11 module through an RS232-C male connector to a device requiring an EIA interface.	59

INTERFACE HARDWARE (Cont'd)

Parallel Line Units

Each additional device that has parallel data requires a DRV11 Parallel Interface module and two BC08R-XX (XX = 1, 3, 6, 10, 20, or 25 feet) cable assemblies.

Cat. No.	Description	Cash Price
B-**DRV11**	An interface with 16 input lines and 16 output lines for transferring 16-bit word or 8-bit byte programmed data transfers.	**$191**
B-**BC08R-XX**	An interface cable with two 20-conductor ribbon cables and an H856 connector on each end. The cable connects between the DRV11 and the user device.	**93***

* Cash price for BC08R-25

User-designed Expansion

A versatile wire wrap module is available for user-designed circuits. The module includes bus interface logic for operation with the LSI-11 processor and also provides adequate board area for custom circuitry. CHIPKITS are also available.

Cat. No.	Description	Cash Price
B-**DRV11-P**	LSI-11 bus foundation module	**$250**
CHIPKIT	See Page 58	—

IEEE Instrument Bus Interface

This option interfaces the computer to instruments designed to IEEE Standard 488-1975 for Digital Interface for Programmable Instrumentation.

Cat. No.	Description	Cash Price
B-**IBV11-A**	An LSI-11 processor/IEEE Instrument Bus interface module.	**$683**

Digital-to-Analog Converter

This D/A converter features a holding register for user control applications.

Cat. No.	Description	Cash Price
B-**AAV11-A**	A four-channel 12-bit digital-to-analog converter.	**$819**

Analog-to-Digital Converter

This option can accommodate 16 single-ended or 8 quasi-differential inputs. Conversion is initiated by program control.

Cat. No.	Description	Cash Price
B-**ADV11-A**	A 12-bit successive approximation analog-to-digital converter.	**$910**

DIRECT SALES CATALOG

IMPORTANT NOTICE • SOFTWARE LICENSING

Software products offered through the Direct Sales Catalog are sold in either of two variations. These variations are in binary data format on the applicable media, such as diskette; or as a program source listing. The sale and use of these software products are controlled by special licensing agreements.

The license required for the purchase and use of software sold in binary form is contained within the terms and conditions of sale on the reverse side of all Direct Sales Catalog order forms and on page 159. The buyer's signature on the order form or placement of an order by any of the approved methods described on page 154 implies adherance to the binary software license and terms.

When software products including source codes are ordered, prior approval and the authorization for sale and use of these products is required by means of a special source code license, a copy of which is shown on the facing page.

All software products in this catalog requiring a source license are identified as such within the ordering information for those products.

Instructions for Source Licensing Applications

1. Customer's company name and address (P.O. box alone is not sufficient) must be filled in at the top of the license form.
2. Under section 2. LICENSE, the complete name and address of the actual site where the source code material will remain must be provided even if the information is the same as in 1, above.
3. Under Section 6. ASSIGNMENT, enter the date, company name, signature and title in the appropriate space.
4. Send the license application together with your order to the Direct Sales Catalog order desk.

NOTE: If you are already licensed to purchase source code material for use at a site previously authorized on a source license, it is not necessary to obtain a second license.

Source license application forms are available on request by calling the Direct Sales Catalog Order Desk.

REFERENCE LITERATURE

Need more information?

The following literature is available FREE to holders of DIGITAL's Direct Sales Catalog (limit 1 each per customer). Included are Manuals and Handbooks giving in depth information on various Direct Sales Catalog products and product families, Product Bulletins and Sales Brochures detailing specifications and characteristics of specific catalog-available products and Application Notes describing the actual usage and application of those products.

DIGITAL offers these publications to aid you in the selection of the most appropriate products to fit your particular needs.

To obtain copies of this literature call the Catalog Order Desk at 800-258-1710 (N.H. 603 - 884-6660) and ask for the publication by name.

Digital Equipment Corporation (hereinafter referred to as "DIGITAL") agrees to grant hereby, and CUSTOMER agrees to accept a non-transferable and non-exclusive license to use each of the software program sources and listings available from DIGITAL (hereinafter singularly and, or collectively referred to as "Source") on the following terms and conditions.

1. TERM

Each source shall be under a separate License effective from the date of delivery thereof and shall remain in force until CUSTOMER discontinues the use of such Source, or the License is otherwise terminated as provided herein.

2. LICENSE

For each Source which CUSTOMER orders and accepts delivery of, CUSTOMER will have the right to copy and use such Source or any portion thereof, or the binaries/object codes generated therefrom, on any Computer System located within the facility or campus specified below for which CUSTOMER has purchased a separate binary license, except that a Source for which no binary license (product) is available from DIGITAL is furnished to CUSTOMER under a license for use on a single CPU. CUSTOMER may modify or copy the Source (with the inclusion of DIGITAL's copyright notice) provided, however, that any portion thereof included in a modified work will remain subject to all terms and conditions of this License. No title to or ownership of the Source, or any unmodified parts, or binaries object codes generated therefrom is hereby transferred to CUSTOMER.

FACILITY OR CAMPUS NAME: .....

STREET ADDRESS .....

CITY .....

STATE ..... ZIP .....

3. SECURITY

CUSTOMER agrees not to provide or otherwise make available the Source, or any portion thereof, or any copies thereof, including but not limited to flowcharts, logic diagrams, binaries/object codes, source codes, and listings, in any form, to any person other than CUSTOMER or DIGITAL employees without the prior written approval of DIGITAL, or, in the case of binaries object codes, a separate License.

LASPS REV. 6/78

4. WARRANTY

DIGITAL DISCLAIMS ALL WARRANTIES WITH REGARD TO THE SOURCE LICENSED HEREUNDER, INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS; and any stated express warranties are in lieu of all obligations or liability on the part of DIGITAL for damages, including but not limited to special, indirect or consequential damages, in contract or tort, arising out of or in connection with the use or performance of the Source licensed hereunder.

5. TERMINATION

In the event CUSTOMER (i) assigns this Agreement or any of its rights hereunder (the word "assign" to include, without limiting the generality thereof, a transfer of a majority interest in CUSTOMER), (ii) neglects or fails to perform or observe any of its existing or future obligations to DIGITAL whether under this Agreement or otherwise, (iii) makes an assignment for the benefit of creditors, or a receiver, trustee in bankruptcy or similar officer is appointed to take charge of all or part of its property and/or (iv) is adjudged a bankrupt, and such condition(s) is not remedied within ten (10) days after written notice thereof has been given to CUSTOMER, this License Agreement and all Licenses granted hereunder as to CUSTOMER shall immediately terminate.

Within two (2) weeks after any such termination, CUSTOMER shall certify in writing to DIGITAL that through its best efforts and to the best of its knowledge the original and all copies, in any form, including partial copies and modifications of the Source, received from DIGITAL or made in connection with the License have been destroyed.

6. ASSIGNMENT

This License Agreement, the licenses granted hereunder and the Source may not be assigned, sublicensed or otherwise transferred by CUSTOMER without prior written consent from DIGITAL. No right to reprint or copy the Source, in whole or in part, is granted hereby except as otherwise provided herein.

digital MINICOMPUTER SYSTEMS
DIRECT SALES CATALOG

The Direct Sales Catalog is:

THE EVOLUTIONARY DECSTATION 78

$7091* buys you a basic 78/40 DECstation 78. For this you get an LSI (large scale integration) PDP-8 minicomputer, a video terminal 16K RAM, 256,256 12-bit words of floppy disk mass storage, multiple parallel/serial I/O ports, and powerful operating system software that includes FORTRAN IV and BASIC. In fact a complete stand alone plug-it-in-and-let's-go computer system. If you are using, or considering using a timesharing service, you must look *twice* at DECstation 78.

Here are some typical application areas to consider:

- *Business (small company or department):* Inventory control, customer records, sales analysis . . .
- *Medical:* Patient recordkeeping (doctors, hospitals, dentists, group programs), accounts receivable, supplies control . . .
- *Education:* Teaching computer skills, student recordkeeping, laboratory data monitoring and reduction . . .
- *Personal Computing . . .*
- *Local Government:* Tax information, budget analysis and preparation, payroll . . .

Save time and effort in systems design by making DECstation 78 the heart of your system. Expand your system by choosing from DECstation 78's extensive menu of peripherals and software.

*Catalog Cash Price.

)IRECT SALES CATALOG

DECSTATION 78

THE AFFORDABLE APPROACHABLE MINICOMPUTER SYSTEM

Priced from $7091

DECstation 78 in its basic configuration 78/40 comprises a VT78 Video Data Processor, an RX78 Dual Floppy Disk Drive, and a mini table. A second RX78 Disk Drive when added to the system mounts below the first, creating the configuration designated 78/60.

DECstation 78 is a "packaged" computer system that in its basic configurations comprise an LSI version of the 16K PDP-8 minicomputer, a video display terminal, one or two RX78 Dual Floppy Disk drive(s), an easy-to-use interface system, and a versatile operating software system OS/78. A compact system stand completes the package, see photo. Unlike other systems which must be configured from individually selected system components, DECstation 78's components are carefully matched and tested as a system by DIGITAL to ensure hassle-free startup.

The heart of DECstation 78 is in the VT78 Video Data Processor in which minicomputer and display are totally integrated. The VT78 minicomputer is an LSI version of the PDP-8 containing 16,384 words (32K bytes) of Random Access Memory. The display system shares the features of the DECscope terminal family, including alphabetic and numeric keypads, a 24-line by 80-character screen format, the complete ASCII upper and lower case character set, 33 special symbols, and nineteen user-defined special function keys. The special symbols set allows the terminal to have basic graphics capability.

The purpose of DECstation 78 is to bring **full capability** computer power within the reach of individuals, small businesses, and large organizations alike. DECstation 78 was designed to cut cost, operating complexity, and size, but to perform with all the efficiency and flexibility of much larger, more complicated computer systems.

DECstation 78 can be easily programmed to perform in a wide range of data processing environments — everything from personal computing and fixed-function applications to real-time, multitasking operations and networking. The Operating System OS/78 supports the popular high-level programming languages BASIC and FORTRAN IV and is an excellent tool for general purpose program development in the single user environment.

Configuring the DECstation 78 system to meet specific needs is a simple matter of choosing the right hardware and software components from the DECstation family. Features that are optional on other, more expensive systems are standard, integral parts of DECstation 78. Features like asynchronous communications, built-in disk and high-speed data interfaces, and a real-time clock.

Installation is simple. There is only one cable between the processor and each peripheral. Fewer complicated electronic and mechanical parts and interconnection cables mean fewer maintenance problems and easier installation. In fact, system interconnection has been so streamlined and simplified that DECstation 78 can be installed by the user in something less than an hour — without special tools. The interconnections are through external plug-in ports which allow the user to adapt or reconfigure DECstation 78 to handle new processing needs as they occur. The I/O connection panel on the back of the processor contains five ports. Two serial EIA RS232C asynchronous interface ports are suitable for interfacing with terminals and other devices that operate with speeds from 50 to 19,200 baud. One port is equipped for modem control, the other is not. A parallel I/O port for printers and custom interfacing provides bi-directional 12-bit transfers at rates up to 15K words per second. A disk interface port allows connection to RX78 Floppy Disks.

The system can be interfaced easily to a number of instrumentation devices in scientific, engineering, medical analysis and other research and development environments. It can be used to collect, process and store data from test equipment, for example, to perform electronic troubleshooting procedures or to monitor and control experiments.

All hardware and software offerings are the same proven DIGITAL components widely used with larger PDP-8 systems.

Floppy Disk Mass Memory

Mass memory for DECstation 78 is provided by the RX78 Dual Floppy Disk Drive. The RX78 is a highly reliable, low-cost mass storage subsystem that accepts two industry standard diskettes each capable of storing 256,256 8-bit bytes or 128,128 12-bit words per drive. Thus total storage capacity is approximately equivalent to two hundred pages of typewritten text. The RX78 diskettes provide a compact data interchange and software distribution medium in addition to functioning as a random-access file device. The simple mechanical construction of the RX78 reduces hardware and operating complexity and makes it as easy to load software as it is to insert a cassette into a tape recorder.

DECstation 78's basic configuration 78/40-DA has one RX78 dual drive which accommodates two floppy diskettes. The other basic configuration 78/60-DA has two RX78 dual drives so it can handle four floppy diskettes.

digital DECSTATION 78

DIRECT SALES CATALOG

Expanding the System

A selection of peripherals and software is available for easy system expansion. The dual drive mass memory of the 78/40 system can be expanded to the equivalent of a 78/60 system by adding an RX78 dual drive to the system. DECstation 78 can support additional video display terminals and hard copy terminals. Two output printers are offered. Modems allow the transmission and receipt of data by DECstation 78 over telephone lines. DECstation 78 can be linked to other DECstation 78's or to a larger host computer in a distributed data processing network. The full complement of powerful software available for DECstation 78 guarantees an applications flexibility previously impossible with such a reasonably priced computer system. The expansion options available through the Direct Sales Catalog are discussed below.

Accessory item such as paper supplies, forms and computer installation furnishings can all be found in the Supplies/Furniture Section of the Direct Sales Catalog.

Disk Drive

The addition of a second RX78 Dual Floppy Disk Drive to the basic DECstation 78 configuration 78/40 increases the mass storage capacity to 1,025,024 8-bit bytes or 512,512 12-bit words. The second RX78 fits into the system stand below the first one. An interface cable is provided. System integration is a simple plug-in operation. No further mass memory expansion of DECstation 78 is possible once two RX78 are in the system. Additional diskettes can be ordered through this catalog. See p. 85 for ordering information.

Printers

Both serial- and parallel-interfacing hard copy printers are available. For local on-site output, the LA78 DECprinter I 180-cps line printer is recommended. This printer interfaces via a parallel port on DECstation 78.

For outputting via a serial port, the LA180 DECprinter I 180-cps line printer can be supplied. When an LA180 is ordered, be sure to specify the optional EIA buffered serial interface option (LAXX-NW). If the LA180 is located locally (within 34 feet of DECstation 78), then Null Modem Cable BC03M-25 is required. However, if the printer is remote and is interfaced via a modem then a BC05D-10 EIA cable must be ordered to connect DECstation 78 to the modem.

Hard Copy Terminals

Either the LA36 DECwriter II or the LS120 DECwriter III can be specified as serial hard copy terminals for DECstation 78. Each provides keyboard input, impact printing, and interfaces via a serial port on DECstation 78. LS120 prints at 180-cps, LA36 at a slower 30-cps.

LA78-PA PARALLEL PRINTER

Featuring

- *180 characters per second.*
- *Parallel interface.*
- *128-character ASCII upper/lower case set with control codes and symbols.*
- *7 x 7 dot matrix.*
- *132-column print, 10 characters per inch horizontal.*
- *6 lines per inch vertical spacing.*

For Details see p. 82.

Priced from $2838

LA180 SERIAL PRINTER

Featuring

- *180 characters per second.*
- *Serial interface (with option LAXX-NW).*
- *Accepts 300, 1200, 2400, 4800, or 9600 baud serial transmission.*
- *128-character ASCII upper/lower case set with control codes and symbols.*
- *7 x 7 dot matrix.*
- *132-column print, 10 characters per inch horizontal spacing.*
- *6 lines per inch vertical spacing.*

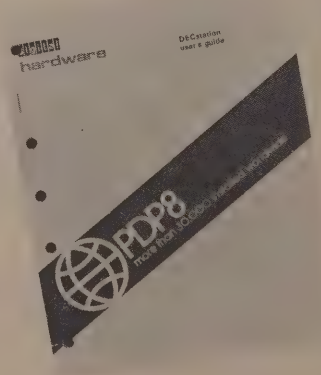
For Details see Terminal Section

Priced from $2688

Important: To interface, through a serial port, with DECstation 78, Option LAXX-NW (EIA Buffered Serial Interface) must be specified and either a BC05D-10 or a BC03M-25 cable ordered. BC05D-10 is used to connect via a modem to LA180. BC03M-25 is used where LA180 is within 34 feet of DECstation 78.

DECSTATION 78 USER'S GUIDE

Need more information on DECstation 78? Complete information on the installation and operation of DECstation is yours for the asking. Simply call the Catalog Order Desk at 800-258-1710 (N.H. 603-884-6660) and ask for a DECstation 78 User's Guide. We'll be happy to send you a FREE copy.



What About Applications Support?

Continuing support in the use of DIGITAL computers is also available through DECUS, the DIGITAL Equipment Computer Users Society. With a membership of more than 25,000 from some 40 countries, DECUS is the largest and most active society of its kind in the world.

Contact your nearest sales office listed on page 174 for further information.

digital DECSTATION 78

DIRECT SALES CATALOG

MINICOMPUTER SYSTEMS

Hard Copy Terminals

LA36 must be ordered with LAXX-LG EIA Interface Option to work with DECstation 78. (LS120 in its basic configuration is EIA Interface compatible.) In either case, interface cable BC05D-10 or BC03M-25 must be specified. BC05D-10 is for interfacing via a modem, BC03M-25 is for local (within 34 feet) connection to DECstation 78.

If a receive-only hard copy terminal is required, the LA35 DECwriter II 30-cps Printing Terminal is available. Order with LAXX-LG Option and cable BC03M-25 or BC05D-10.

Video Display Terminals

DECscope Video Terminals can be added to the DECstation 78 system. VT52 DECscope has a 24-line by 80-character screen. Model VT52-AE interfaces via a serial port on DECstation 78. As explained above for hard copy terminals, either a BC05D-10 or BC03M-25 cable is required.

When terminal graphics capability such as bar charts and curves in point plot or histogram (shaded) format is required, a VT55 DECgraphic Scope should be specified. Screen capacity is 24-lines by 80 characters of text or two graphs of 512 data points each. VT55 interfaces via a serial port on DECstation 78 when cable BC05D-10 or BC03M-25 is used.

Software

The OS/78 operating system is a complete software development operating system designed to run on DECstation 78. OS/78 is supplied as part of the basic system. In addition to OS/78, a multitasking real-time operating system RTS/8 is optionally available. RTS/8, assembly language based, allows multiple tasks to run concurrently while competing for resources on a fixed priority basis. A communications software package DECNET/8 can be added to run under RTS/8. DECNET/8 enables a user to write programs which will allow two or more VT78 Video Data Processors or PDP-8's to communicate via standard DIGITAL interfaces. It is based on DIGITAL's standard network protocols.

LA35/LA36 SERIAL TERMINALS (30 CPS)

Featuring

- *30-character-per-second*
- *ANSI typewriter keyboard on LA36.*
- *ASCII 128-character set. (and keyboard on LA36).*
- *Optional numeric keypad, LA 36 only.*
- *Switch selectable baud rates of 300, 150 and 110.*
- *EIA RS232C interface (with option LAXX-LG).*
- *Full-duplex or half-duplex operation.*

Priced from $1595

To interface, through a serial port, with DECstation 78, LA35/LA36 must be equipped with option LAXX-LG (EIA Interface with Modem Control). Also, a BC05D-10 or BC03M-25 cable must be ordered as discussed under the LA180 description. An optional keypad can be specified for LA36 as option LAXX-KK. LA35 without keyboard is at rear in photo.

For Details see Terminal Section
Don't Miss LA35/LA36's "with the trimmings" in that Section.

LS120 SERIAL TERMINAL (180 CPS)

Featuring

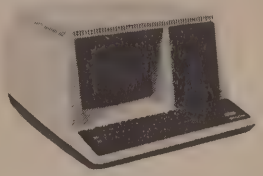
- *180 cps printing.*
- *110, 300 or 1200 baud operation plus additional, operator-selectable rates of up to 4800 baud.*
- *Full- or half-duplex operation.*
- *EIA RS232C interface*
- *7 x 7 dot matrix.*
- *132-column printing; 10 characters per inch horizontal; 6 lines per inch vertical spacing.*
- *128-character ASCII upper/lower case set.*
- *ANSI keyboard with multi-key rollover.*

Priced from $3072

Model LS120-HE is equipped with an EIA interface so it can connect through a serial port on DECstation 78. Cables BC03M-25 or BC05D-10, however, are required as explained under the LA180 description.

For Details see Terminal Section

VT52 DECSCOPE



Featuring

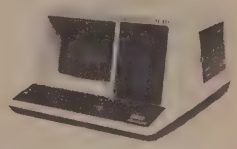
- *1920-character screen with twenty-four lines of 80 characters.*
- *Highly reliable keyboard featuring typewriter layout.*
- *Numeric function keyboard.*
- *Asynchronous data communication at individually switch-selected transmit and receive baud rates from 75 to 9600 baud.*
- *ACSII code utilized, plus additional commands through escape sequences.*
- *EIA RS232C interface (Model VT52-AE).*
- *Full-duplex operation.*

Priced from $1729

Either a BCO$D-10 or a BC03M-25 cable is required as explained under the LA180 description.

For Details see Terminal Section

VT55 DECGRAPHIC SCOPE



Featuring

- *Upper and lower case text.*
- *Switch selectable transmission rate (75 to 9600 baud).*
- *19-button keypad for directing cursor movement and numerical entry.*
- *Hard copy output of both alphanumeric and graphics (VT55-FE only).*
- *Standard typewriter keyboard.*
- *EIA RS232C interface.*

Priced from $2499

Either a BC03M-25 or BC05D-10 cables are required as explained under the LA180 description.

For Details see Terminal Section

digital DECSTATION 78

DIRECT SALES CATALOG

TECHNICAL DESCRIPTION

Display and Keyboard Features

- *Easy to use typewriter-like keyboard.*
- *19-key auxiliary numeric keypad (11 numerics, 4 cursor keys, 3 user-definable function keys, ENTER key), plus auto repeat key.*
- *Direct cursor addressing.*
- *Fixed horizontal tabs.*
- *Quiet operation.*
- *Adjustable character brightness.*
- *24-line x 80-character screen format.*
- *7 x 7 dot matrix*
- *Full 128 ASCII upper and lower case character set plus 33 special graphic characters.*
- *Communications to imbedded CPU at 9600 baud.*
- *Other features including upward scroll, erase to end of line, erase to end of screen and hold screen mode.*

VIDEO DISPLAY AND KEYBOARD

In DECstation 78 the computer and terminal are a single compact unit, designated as a VT78 Video Data Processor. The processor and display are interconnected over a high-speed serial line with the processor physically located inside the video display's case. A single START switch activates the entire system. At system power-up, the display and keyboard are automatically tested.

The keyboard/video display is basically a DECscope in origin but has some added features to tailor it to DECstation 78. The same clarity of displayed characters, adjustability of screen intensity, and glare-free screen popular in DECscope products are carried over in DECstation 78.

The keyboard is standard typewriter (ANSI) and produces a key-stroke click for audible feedback of key operation (click can be eliminated for silent operation). Three-key rollover protection eliminates fast typing errors. Should three keys be depressed simultaneously, transmission will still be correct if one of the first two keys typed is released before the third. The figure shows the layout of the keyboard and describes the functions of the various keys. Note that striking a key does not directly cause a display result. All instructions are fed to the processor which then controls the displayed characters or cursor movements. This is equivalent to a DECscope-Host computer configuration where the instructions are echoed back from the host.

The use of two or three code escape sequences greatly expands the range of commands to which DECstation 78 responds. Basically these commands fall into four categories: Cursor Control, Screen Erase, Hold Screen, and Keypad/Keyboard Mode Change. See Table IV for details.

An auxiliary keypad extends the keyboard's capabilities. The keypad has 19 keys. The function of each key is shown in Table II. There are two modes in which the keypad can operate, Normal and Alternate. The Alternate Mode is established by an escape sequence (ESC =) to enter the mode and (ESC >) to exit the mode. When in the Alternate Mode, the ten numeral keys, the decimal point key, and the ENTER key transmit unique escape codes, Table II, for custom assignment by the user. In either mode, there are also three blank unassigned keypad keys for user definition. Cursor control keys complete the keypad's functions.

TABLE I

FULL ASCII CHARACTER SET AND CODESHIFT CAUSED BY CONTROL KEY

CTRL Key* Down		Codes Transmitted When CTRL Key Is Not Down					
Octal Code	Char.	Octal Code	Char.	Octal Code	Char.	Octal Code	Char.

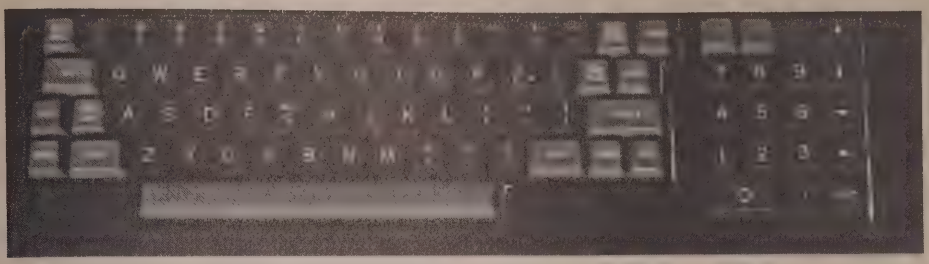
*With CTRL Key down striking **any** key in the three rightward columns of the table cause the code in the CTRL Key down column to be transmitted. For example with CTRL Key down, keys Space, @ and / all transmit Octal Code 000 which is NUL.

digital DIRECT SALES CATALOG

MINICOMPUTER SYSTEMS

DECSTATION 78



KEYBOARD FUNCTIONS

Key	Function
A thru Z	Selects upper case or lower case characters (depending on SHIFT key) for entry into processor.
1 through 0 and symbol keys (!, #, @, etc.)	Selects corresponding numeral or symbol (depending on SHIFT key) for entry into processor.
ESC (Select)	Transmits ESC (033) code to processor. This alerts processor that next character or sequence of characters is a command.
TAB	Moves cursor rightwards to the next TAB stop. TAB stops are fixed in columns 9, 17, 25, 33, 41, 49, 57, 65, and 73.
CTRL	When held down, CTRL key changes the code transmitted by other keys to initiate control functions. See Table I.
SCROLL	When pressed SCROLL key will add one line of characters to display when in the Hold Screen Mode. Typing SHIFT SCROLL will add a screenful of characters. See description in text.
CAPS LOCK	Cause letters A through Z to always be upper case. Has no effect on numerals or symbols.
SHIFT	Selects upper case or lower case alphabetic characters and numeral or symbol characters to be entered into processor.
BACK SPACE	Moves cursor one space to the left.
LINE FEED	Drops the cursor one line in same column.
DELETE	Eliminates character above cursor.
RETURN	Moves cursor to extreme left margin. Carriage Return function.
REPEAT	With REPEAT key pressed, any other code-transmitting key will continuously transmit its code to the processor.
COPY	Not used.
BREAK	Not often used but included for compatibility with half-duplex serial data lines. When pressed, holds data line in zero state.
SPACE BAR	Erases character at the cursor position and moves cursor one column to right.

Graphics Capability

DECstation 78 has a built-in graphics capability which, by means of special symbols, enables the user to display bar graph data, for example, more accurately than with only the ASCII character set, Table I. The keyboard/video display enters the Graphics Mode by escape sequence (ESC F) and exits by escape sequence (ESC G). When in the Graphics Mode, octal codes 136-176, which normally stand for lower case alphabetics and certain symbols, are interpreted as 33 special symbols. Table III depicts the symbols and describes their functions.

Controlled Scrolling

Often the data coming from the processor arrives too fast for the display to handle. In this case software, through the transmittal of octal codes (021) XON and (023) XOF, establishes an optimum speed for the display by halting transmission as required. The operator can override the software controlled scrolling by putting the display in the Hold Screen Mode (enters mode via escape sequence (ESC [), exits via (ESC/)). In this mode, new data is displayed only when the operator presses the SCROLL key or the combination SHIFT SCROLL. In the former case, one line of new data is displayed; in the latter an entire screenful.

TABLE II
AUXILIARY KEYPAD FUNCTIONS

Key	Normal Code	Alternate Keypad Code
0-9	Numeral	ESC ? p) thru (ESC ? y)
•	Decimal Point	(ESC ? n)
ENTER	Same as RETURN	(ESC ? M)
↑	Up Cursor (ESC A)	Up Cursor
↓	Down Cursor (ESC B)	Down Cursor
→	Right Cursor (ESC C)	Right Cursor
←	Left Cursor (ESC D)	Left Cursor
Left Blank	User Defined (ESC P)	(ESC P)
Center Blank	User Defined (ESC Q)	(ESC Q)
Right Blank	User Defined (ESC R)	(ESC R)

Note: None of the keys on the auxiliary keypad are affected by pressing the SHIFT, CAPS LOCK, or CTRL keys.

DEALING DIRECT SAVES YOU TIME

All Catalog Items are generally available for Off-the-Shelf delivery. Usually we ship within 24 hours from receipt of your order. When **Fast** delivery is **Critical** — place your order through DIGITAL's Direct Sales Catalog.

175	subscript 9	}
176	paragraph	~

Codes 154-163 These codes cause eight horizontal lines at various scans within the character position to be displayed. These bars can be used to print a bar-graph on the screen with more accuracy than would be possible using only minus signs and underlines.

Codes 142-145 (1/, 3/, 5/, and 7/) are used preceding the subscripts to form fractions. In particular, the fractions ⅛, ¼, ⅜, ½, ⅝, ¾, and ⅞ can be formed using these four symbols and the subscripts.

Code 151 The ellipsis appears as three dots in the character position (. . .). The spacing of these three dots is such that several of these symbols placed adjacent to one another in the screen will produce a smooth line of dots.

Codes 136-140 These codes are reserved for future use.

TABLE IV
ESCAPE SEQUENCE COMMANDS

Escape Sequence	Action
CURSOR CONTROL COMMANDS	
ESC A	Moves cursor up one character position in same column. No scrolling.
ESC B	Moves cursor down one character position in same column. Same function as LINE FEED. No scrolling.
ESC C	Moves cursor one column to right.
ESC D	Same as Backspace (BS). Moves cursor one column to left.
ESC H	Cursor Home command. Moves cursor to upper left character position on screen.
ESC Y	This sequence followed by a line designate (octal 040 to 067) followed by a column designate (040 to 157) directs cursor to a specific coordinate character location on screen. Most useful for forms work.
ERASE SCREEN COMMANDS	
ESC K	**Erase to End of Line** command. Erases all information at the cursor position and rightward to end of line.
ESC J	**Erase to End of Screen** command. Erases all information from cursor position to end of screen.
ESC ⊏	**Enter Hold Screen Mode** command. In this mode data cannot scroll off screen except by pressing SCROLL key. See text for details.
ESC /	**Exit Hold Screen Mode** command. See ESC ⊏ above.
KEYBOARD/KEYPAD MODE CHANGE COMMANDS	
ESC =	**Enter Alternate Keypad Mode** command. Converts certain keypad keys to transmit unique escape sequences. See Table II.
ESC >	**Exit Alternate Keypad Mode** command.
ESC F	**Enter Graphics Mode** command. Converts octal codes 136 thru 176 to special graphic symbols for display. See Table III.
ESC G	**Exit Graphics Mode** command. See ESC F above.

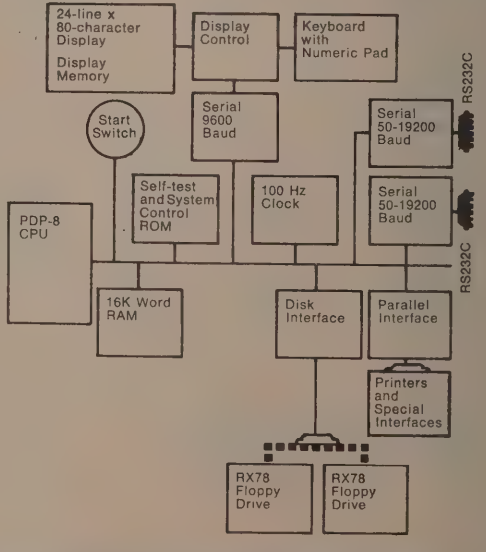
Processor

The overall organization of DECstation 78 is shown in the figure. An LSI (large scale integration) version of the powerful PDP-8 minicomputer contained on a 15¾" x 11⅞" printed circuit board is mounted inside of DECstation 78's video display unit. This is the processor for the system. It includes a 12-bit CPU with memory extension control, 16,384 words (32K bytes) of Random Access Memory, complete peripheral interfacing, internal bootstrap facilities, and a 100 Hz real-time clock. The CPU has the same powerful instruction set as the PDP-8A. Cycle time is approximately 3.6 μs.

Three general purpose processor registers are provided:

- PC. The 12-bit program counter points to the location from which the next instruction will be fetched.
- AC, L. The 12-bit accumulator and its 1-bit carry extension, the Link, form the register where all arithmetic calculations take place.
- MQ. The 12-bit Multiplier Quotient register serves as a temporary storage register.

Main memory is 12-bits by 16K words of Random Access NMOS Memory organized as 4 fields of 4K words each. Each field consists of 32 pages of 128 words.



TECHNICAL DESCRIPTION (Cont'd)

Processor (Cont'd)

An on-board ROM permits several important features to be included. These are:

- Automatic self-test procedure.
- Processor status display.
- Terminal emulation mode, which allows DECstation 78 to be used as a stand alone computer terminal without independent processing capability.
- Internal disk bootstrap.
- Preselection of baud rates on primary communications port, Table V.

There are two basic groups of instructions: memory reference and microinstructions. Memory reference instructions require an operand; microinstructions do not. The DECstation 78 processor features indirect addressing capability up to 4K and 8 auto-index registers. Three groups of operate microinstructions perform a variety of program operations without any need for reference to memory location. Groups 1 and 2 allow the programmer to manipulate and/or test the data that is located in the accumulator or link. Group 3 operate instructions allow the programmer to manipulate the MQ register. Many of these operate microinstructions may be combined by the experienced programmer in order to use the DECstation 78 processor more efficiently.

Input/Output (IOT) instructions are used to control the operation of the computer's interrupt system and clock and to make all exchanges of data to the system display, keyboard, and externally connected peripherals.

There are four interface ports for DECstation 78: a parallel port, a disk interface port, and two asynchronous serial ports. The parallel I/O port is for printers and custom interfacing. It provides bidirectional 12-bit transfers at rates up to 15K words per second.

The two asynchronous serial EIA RS232C interface ports are suitable for primary and secondary communications applications, terminals, and the attachment of a variety of devices. These ports (SLU 2 and SLU 3) feature 16 program selectable baud rates ranging from 50 to 19,200 baud and programmable loopback for maintenance, Table V. One port, SLU 3, provides programmable parity generation and overrun detection, variable width stop-bit selection and programmable character length. The other port, SLU 2, is equipped for full modem control.

The disk interface port allows connection between the DECstation 78 processor and two independent dual drive disk units (RX78). It provides both 8- and 12-bit data formats for maximum flexibility.

TABLE V

BAUD RATE TABLE

Programmable baud rate selection is provided with DECstation 78 as a standard feature. It makes adaption to a particular communication environment very simple and eliminates error prone setting of internal switches and jumper wires.

Baud Rates Selectable

50	150	1800	4800
75	300	2000	7200
110	600	2400	9600
134.5	1200	3600	19200

RX78 Floppy Disk Drive

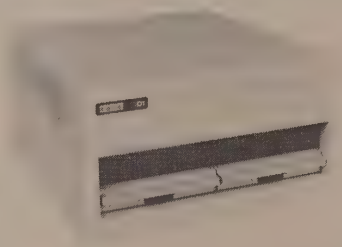
The RX78 Floppy Disk System is an inexpensive mass storage subsystem, I/O and random access file device characterized by speed and reliability. Either one or two compact, self-contained units may be interfaced with the processor via a high-speed data port on the external connector panel. Each RX78 includes **two drives,** a microprogrammed controller module and a read/write electronics module. The system is capable of storing either 256,256 8-bit bytes or 128,128 12-bit words **per drive** in industry standard format.

Given an absolute sector address, the RX78 locates that sector and performs the desired function. The RX78 performs all necessary parity checks and provides error indications. Head position is automatically verified, and each sector has a cyclic redundancy check (CRC) character as part of the header field and another CRC character as part of the data field. The RX78 generates and verifies the CRC characters and provides error checks.

Track-to-track moves require ten milliseconds for the move plus twenty milliseconds for settling time if the head is loaded for a read or write. The rotational speed of the diskette is 360 rpm, with an average latency time of 83 milliseconds. The total average access time is only 483 milliseconds. During a sequential access, the whole diskette can be read in about thirty seconds.

The RX78 Floppy Disk System uses IBM-standard diskettes — thin, flexible oxide-coated disks about the size of a 45-rpm phonograph record. The disk is recorded only on one side and is permanently contained in an 8-inch square flexible protective evelope. The envelope has a large center hole for the drive spindle, a small hole for track index sensing, and a large slit for the read/write head. A solenoid contact load pad is located on the opposite side of the envelope. The inside of the envelope is covered with a soft material designed to wipe the disk surface clean just before reading.

The diskette contains 77 tracks with 26 sectors per track. Each sector can store 128 8-bit bytes or 64 12-bit words for a total formatted capacity of 256,256 bytes or 128,128 words.



The diskette is a portable, convenient storage, interchange and software distribution medium which allows DECstation 78 users to store large amounts of data in a small space. Additional diskettes are available through the Direct Sales Catalog. See p. 85.

Once a diskette is loaded into the drive and the door closed, the diskette is engaged on the registration hub. When the diskette drive is at operating speed, the software takes over. Unloading is as simple a process. Elimination of any other operator controls simplifies operation.

RX78 SPECIFICATIONS

Storage Medium: Preformatted industry-compatible diskette.
Capacity per Diskette: 256,256 8-bit bytes or 128,128 12-bit words.
Data Transfer Speed: 10K bytes/second in byte mode; 5K words/second in 12-bit mode.
Time for Half Revolution: 83 msec.
Diskette Rotation Speed: 360 rpm.
Drives per Control: 2 (maximum).
Track Positioning Time:
One track move: 10 msec. Average access time: 483 msec.
Average track seek: 380 msec. Maximum track seek: 760 msec.
Head setting: 20 msec.
Data Organization:
Tracks: 77
Sectors: 26 per track
Capacity per sector: 128 8-bit bytes or 64 12-bit words
Recording Method: Double frequency.

digital DECSTATION 78

TECHNICAL DESCRIPTION (Cont'd)

PRINTER OPTIONS

LA78-PA DECprinter I Parallel Printer

Standard Features

- *180 characters per second.*
- *Parallel interface.*
- *Accommodates 6-part form (0.20" max. thickness).*
- *Handles variable-width forms, 3 through 14⅞"W.*
- *132-column print, 10 characters per inch horizontal.*
- *6 lines per inch vertical spacing.*
- *128-character ASCII upper/lower case set with control codes and symbols.*
- *7 x 7 dot matrix.*
- *Backspace capability.*
- *Fine vertical adjustment for accurate forms placement.*
- *Paper-out switch.*
- *Paper-out override.*
- *Switch-settable forms length (11 lengths).*

The LA78 DECprinter is a 180-cps hard-copy printer with a full complement of standard features which make it one of the most affordable and easy-to-use matrix printers available.

The LA78 accommodates any of eleven common-length forms. The LA78 also features quiet operation, a durable field-proven print head, the accommodation of multipart forms of varying width, and adjustable vertical positioning for accurate form placement.

The LA78 interfaces through DECstation 78's parallel port. In its mechanical details, LA78 is identical to DECprinter I's LA180 which is described in the Terminal Section of the Direct Sales Catalog. Note LA78 comes equipped with a 25-foot cable to connect it to DECstation 78.

LA78 SPECIFICATIONS

Power: 115 Vac, 60 Hz.

Heat Dissipation: 400 w printing; 100 w nonprinting.

Environment:
Operating temperature: 10°C to 40°C (50°F to 104°F).
Relative humidity: 10% to 90% noncondensing.
Maximum wet bulb: 28°C.

Dimensions: 32.2"H x 27.5"W x 20.0"D.

Mounting: Freestanding.

Weight: 120 lbs. approx.

Color: Off-white top with flat black base.

COMMERCIAL BASIC NOW INCLUDED WITH DECSTATION 78

Users tell us that adding Commercial BASIC to the OS/78 operating system gives DECstation 78 features not available on ANY OTHER "under $10K" computer system.

BASIC consists of an editor, compiler, and a runtime system, all three supporting BASIC's dual functions as an interactive program development tool and a system for interactive and batch execution.

BASIC includes features oriented to the Commercial user:

- *Three types of data format: floating point numeric, alphanumeric string, and commercial decimal (number string) data.*
- *Commercial decimal arithmetic to 15-digit precision, including automatic data format conversion as required.*
- *PRINT USING statement for formatted printing of numeric strings; especially useful for columns and tables.*
- *Full uppercase/lowercase capability.*
- *Cursor control function to facilitate data entry.*
- *Faster run-time performance.*
- *Random-access record-oriented I/O for rapid storage or retrieval of individual records.*
- *Smaller memory-space needed.*
- *OEM's can protect their source code by distributing programs as saved files.*
- *Existing assembly language programs can be mixed with new Commercial BASIC programs.*
- *Because BASIC programs can be run under the OS/78 BATCH processing facility DECstation can be used interactively or jobs can be queued to run over extended periods — such as overnight.*
- *Concurrent operations — like simultaneous data entry and communications — are possible.*
- *A line printer spooler Symbiont guides users in writing their own Symbionts.*

By adding Commercial BASIC to the DECstation 78 we have increased its capabilities for the user in the Commercial environment. And all this increased capability is brought to you at NO EXTRA CHARGE.

TECHNICAL DESCRIPTION (Cont'd)

SOFTWARE

Three major software packages are available for DECstation 78. These are: an Operating System OS/78 that is included in the price of the basic DECstation 78 package; an optional real-time multitasking facility RTS/8; and an optional communications software package DECNET/8. Note RTS/8 must be installed before DECNET/8 can be used. In addition to these basic software support packages, the DECstation 78 user has access to the extensive library of PDP-8 programs. Consult the Direct Sales Catalog Desk for further information. OS/78, RTS/8 and DECNET/8 are discussed below.

IMPORTANT

Certain Software is provided by DIGITAL only under a non-transferable and non-exclusive license to use. See p. 72 for details.

Multilanguage Operating System OS/78

OS/78 provides DECstation 78 users with power and flexibility in both interactive and batch programming environments. OS/78 is based on DIGITAL's proven OS/8 and offers many features previously available only on larger computer systems. OS/78 maximizes utilization of DECstation 78 main memory because the resident portion of the operating system requires only 256 words of memory. Non-resident portions of the system are swapped into memory from the RX78 floppy disk automatically as required.

OS/78 is easy to use and provides the development programmer with a complete, logical interface to program and file structures. All data files and executable programs are stored on one or more floppy disks where they may be accessed for loading, modification or execution by simple keyboard commands.

OS/78 incorporates Commercial BASIC and FORTRAN IV and provides a comprehensive set of software tools and utility programs that help make DECstation 78 an excellent program development and calculations tool in the single-user environment. These include EDIT, PAL8, CREF, ODT and BATCH PROCESSING, among others.

EDIT is a line-oriented text editor that allows the user to enter and modify ASCII files. It supports commands to list, insert, delete, change and move text as well as to search for character strings.

PAL8 is a two-pass language assembler that provides the programmer with the capability of coding directly in machine-oriented symbolic instructions. Its features include: 1) conditional assembly which enables a single source file to produce different binaries for different purposes; 2) paginated listings, page headings and page numbering to improve program documentation; and 3) a symbol table which lists all program labels and their memory location or value.

CREF (Cross-Reference Utility Program) aids the programmer in writing, debugging and maintaining assembly language programs by providing the ability to pinpoint all references to a particular symbol. CREF provides an alphabetical cross-reference table for PAL8 assembly listings and numbers each line in the listing. Program symbols and literals are printed alphabetically along with the numbers of the lines that reference to them. Optional two-pass operation doubles the number of symbols that can be accommodated in a program.

ODT (Octal Debugging Technique) is invisibly co-resident with the user program so that there is no need to allocate more than 3 words in each 4K field for a debugging package during development. Breakpoints can be set anywhere in a program to allow the programmer to trace the execution of his program. Whenever program execution is suspended, ODT provides the capability to examine and optionally modify memory locations or registers. Specified areas of memory may be searched by means of ODT's binary memory search mechanism.

OS/78's BATCH PROCESSING utility allows lengthy sequences of commands or frequently used programs to be run automatically on DECstation 78.

Real-time Multitasking RTS/8

RTS/8 is DIGITAL's real-time, multitasking software facility for use with the PDP-8 family of minicomputers.

RTS/8 allows DECstation 78 to handle many tasks simultaneously by making use of the otherwise idle processor cycles that occur periodically during a program's execution. A user-defined priority list allows the most important jobs to be processed first. As a result, programs in execution can, if necessary, be temporarily suspended and removed from memory (swapped out) to make room for a higher priority job.

RTS/8 includes comprehensive resource management capabilities. It maintains the current status of system resources to determine the combination of peripherals, input files, and run-time options to be used during the current execution of a program.

By using RTS/8, the programmer is able to take advantage of a set of software modules (see box) that will interface with his hardware, thereby freeing him to concentrate on his own programs and greatly reduce development time.

Note:
RTS/8 must have OS/78 software as the operating system.

RTS/8 MODULES

RTS/8 EXECUTIVE controls the overall execution and interaction of task schedules, startup and suspension as well as the passing of information between tasks.

MONITOR CONSOLE ROUTINE (MCR) MODULE provides the programmer functions, which he can request from the console terminal, to control, inspect and debug an experimental system.

RX78 FLOPPY DISK MODULE enables interrupts from the floppy disk and accepts and processes messages sent to it.

OS/8 FILES MODULE enables the user to look up, create and delete files in OS/78 directories from a task. When used in conjunction with other mass storage modules, it gives programmers the capability to read or write OS/78 files on the floppy disk.

CLOCK MODULE accepts requests to perform actions after a specified time has elapsed or at regular intervals.

CONSOLE AND NON-CONSOLE TERMINAL MODULES each handle a single terminal in either line or character mode. Input in line mode is terminated by a carriage return or an ALTMODE character, and may be edited with a RUBOUT or CTRL/U character. In character mode, input is not echoed and is terminated by overflow of a specified character count.

LINE PRINTER MODULE supports an LA78 line printer. Its structure is also identical to line mode in the terminal module.

SWAP MODULE swaps other tasks into or out of memory. It determines if a task is already in memory or whether it must first be written onto mass storage before another task may reside in its partition area of memory, or whether a new task can be swapped into memory without regard to what was in the partition previously.

Communications Networking DECNET/8

DECNET is a set of software tools which may be used to extend RTS/8 so that a DECstation 78 may be connected with other computer systems to form a data network. The DECNET user can configure a variety of networks utilizing DECstation 78's or DECstation 78's and other members of the PDP-8 family. These may include communications networks, resource-sharing networks, manufacturing or computational networks.

The DECNET/8 package includes the following software components: Digital Data Communications Message Protocol (DDCMP); Network Information Program (NIP); Terminal Communication Facility (TLK); and Interrupt Service Routines (ISR).

DIRECT SALES CATALOG

SITE CONSIDERATIONS

All the components described in this section will interface together in terms of matching logic levels and operating functions. Note that all specified models in the ordering information are selected for operation from a 115V 60 Hz AC supply. Should you consider adding components other than those specified here to your system, be sure to order compatible models. The power requirements for each component are given in the table below. Plan your installation accordingly. Environmental specifications for each component are also summarized below. Design your installation for the "worst case" component. The printers, hard copy terminals, and DECstation 78 are free-standing. DECscopes have to be placed on a desk or a table or a terminal stand (see Supplies/Furniture Section for suitable furniture). The overall size of each component is summarized in the table. The overall dimensions of DECstation 78 are shown pictorially. Unit weights (not shipping weights) are also summarized in the table. The color scheme for each unit is off-white and flat black.

DIRECT SALES CATALOG

The Direct Sales Catalog is:
LOGIC MODULES

These are the same modules used in DIGITAL's products and by hundreds of OEM's for computer interfacing, instrumentation, data gathering, and control. If you're in the business of designing, assembling, or testing logic subsystems, then purchasing the components through this catalog makes sense. You probably know what you need, the specification criteria required, and how to implement the design. In other words, you don't need a sales presentation by DIGITAL. We can pass that cost savings directly to you when you order through this catalog.

Featured are DIGITAL's M Series TTL-integrated circuit modules. The M Series line consists of modules ranging from basic and fundamental logic modules to self-contained computer interfacing modules. The impact of advancing technology can be seen in M Series evolution. From the beginning, M Series was TTL-integrated circuit-oriented; the current trend is toward MSI and LSI. The result is more complexity (and more built-in design solutions) per module. Many of the modules in this catalog amount to full-scale digital subsystems. The microcomputer is the latest result of the continuing technological advancements. As the leading supplier of logic modules, DIGITAL applied this micro concept to a family of modules designated LSI-11 and LSI-11/2. See details starting on p. 38 in this catalog.

Also offered through the Direct Sales Catalog are A-Series analog modules and computer interface modules (for both the PDP-8 and PDP-11), computer systems, mounting hardware, power supplies, and cabling. All these support functions provide a total capability for designing, implementing, and assembling a modular system, small or large, at the lowest cost per function in the industry. P. 107 in this catalog explains the physical aspects of DIGITAL's modules.

digital DIGITAL MODULES—M SERIES

DIRECT SALES CATALOG

M SERIES MONOLITHIC MODULES

M Series high-speed monolithic integrated circuit logic modules employ TTL (transistor-transistor logic) circuits which provide high speed, high fanout, large capacitance drive capability, and excellent noise margins.

The M Series include a full digital system complement of basic modules which are designed with sufficient margin for reliable system operation at frequencies up to 6 MHz. Specific modules may be operated at frequencies up to 10 MHz. The integrated circuits are dual-in-line packages.

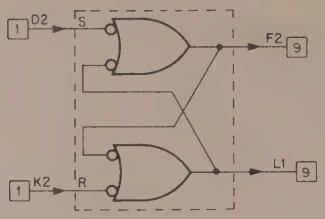
General Characteristics

Power Supply Voltage	+5V dc ±5%
Logic Levels	Input / Output Logical LOW (0): 0.0 to 0.8V / 0.0 to 0.4V Logical HIGH (1): 2.0 to 3.6V / 2.4 to 3.6V Noise Margin — Worst Case: 400 millivolts
Input and Output Loading	The input loading and output drive capability of M Series modules are specified in terms of a specific number of unit loads. Typically, the input loading is one unit; however, certain modules may contain inputs which will present greater than one unit load. The typical M Series module output will supply 10 unit loads of input loading. However, certain module outputs will deviate from a 10-unit-load capability and provide more or less drive. Always refer to the individual module specifications to ascertain actual loading figures.
Unit Load	In the logic 0 state, one unit load requires that the driver be able to sink 1.6 milliamps (maximum) from the load's input circuit while maintaining an output voltage of equal to or less than +0.4V. In the logic 1 state, one unit load requires that the driver supply a leakage current of 40 microamps (maximum) while maintaining an output voltage of equal to or greater than +2.4V.
Timing	M Series pulse sources provide sufficient pulse duration to trigger any M Series flip-flop operating within maximum propagation delay specifications. Detailed timing information appears in the **Logic Handbook.**

DIGITAL MODULES—M SERIES

R/S FLIP-FLOPS

Module M203 is made up of 8 Reset/Set flip-flops. Each flip-flop, see diagram, comprises two 2-input NAND gates with cross-coupled outputs. The load/drive capability is indicated on the diagram.



Cat. No.	Flip-flops per Module	Size	List	Cat.	Cash	Shipping Weight
B-M203	8	SSS	$27	$26	$25	See p. 161

D-TYPE FLIP-FLOPS

A D-type flip-flop functions to transfer each input (HIGH or LOW) on the D-line to the output when the threshold is reached on the leading (positive-going voltage) edge of the clock pulse (or a level change). Each flip-flop has independently gated data, clock, and dc set inputs. All, except M206, have independent dc resets. M206 has six flip-flops. One group of three has a common jumper-removable dc reset line. The other group has a permanent common dc reset. The load/drive capability is indicated on the diagrams, Fig. 1 or Fig. 2.

J-K FLIP-FLOPS

When both J and K inputs are HIGH, the J-K flip-flop, Fig. 1, complements (outputs change state) on the negative-going threshold of the clock pulse. A common reset (CLEAR) line is present on both M207 and M204, although three of the six flip-flops on M207 can be disconnected from the common line by removable jumpers. M202, see Fig. 3, has a 3-input AND gate on each of the J and K inputs. M204 has 2-input AND gates on both J and K inputs on one of the four flip-flops, Fig. 4, 3-input AND gates on both J and K inputs on another of the flip-flops, Fig. 2, and a 2-input AND gate on the J input of a third flip-flop, Fig. 3. One flip-flop does not have input gates, Fig. 1. The arrangement of these flip-flops permits counters to be formed (up to 16 per module) with simple connector wiring.

Load/drive capabilities are indicated on the diagrams, Fig. 1, 2 and 3.

digital DIGITAL MODULES—M SERIES

DIRECT SALES CATALOG

LOGIC AMPLIFIERS

Solenoid Drivers — M040, M060

These modules are designed to drive inductive loads such as relays and solenoids. (Use M050 for incandescent lamp loads.)

The M040, Fig. 1, contains two identical negative high-voltage driver circuits. Each consists of a 4-input positive NAND gate that controls a PNP transistor switch. The switch is capable of sinking up to 600 mA of current to ground from an external power supply of up to —70 volts. One terminal of the load device (relay, etc.) must be connected to the external voltage, the other to the drive output. The positive terminal of the external supply connects to the module ground.

The M060 module, Fig. 2, consists of four identical positive high-current driver circuits. Each circuit contains an inverting gate that controls an NPN transistor switch. A low level, at any input, will turn on the switch which is capable of driving loads up to 1.2 amps to ground with external power supply voltages of up to +75 volts dc.

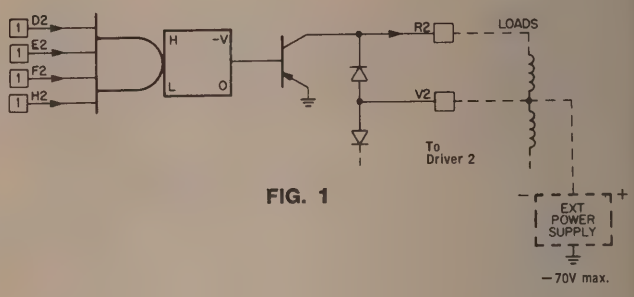

FIG. 1

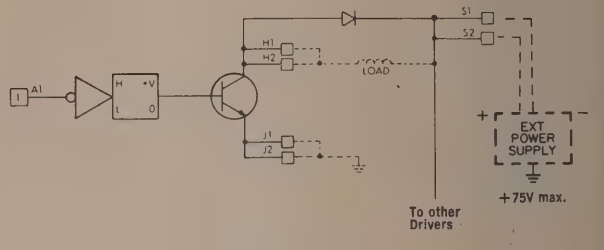

FIG. 2

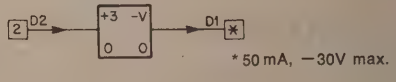
B-M040	SSS	2	$43	$41	$39	See p. 161
B-M060	SSS	4	60	57	55	

Incandescent Lamp Driver — M050

The M050 contains twelve transistor inverters that can drive miniature incandescent bulbs such as those on an indicator panel. A LOW level on the input of the driver causes current to flow in the output. Do not use to drive inductive loads (relays, solenoids). Each output is able to drive 50 mA into an external load connected to any voltage up to —30 volts.



Cat. No.	Size	Drivers per Module	List	Cat.	Cash	Shipping Weight
B-M050	SSS	12	$36	$34	$33	See p. 161

Cable Driver, Positive Level — M660

The M660 Cable Driver consists of three NAND gate circuits each of which will drive a 100-ohm terminated cable with M Series levels or pulses of duration greater than 100 ns. The output is not open-collector. It is a discrete transistor totem pole configuration similar to an IC gate providing high current drive in both the high and low directions. Outputs can sink 50 mA at a logic LOW, and can source 50 mA at a logic HIGH.

Cat. No.	Size	Drivers per Module	List	Cat.	Cash	Shipping Weight
B-M660	SSS	3	$29	$28	$26	See p. 161

DIGITAL MODULES — M SERIES

CLOCK MODULES

Crystal Controlled Clock — M4050

The M4050 is a crystal controlled clock module that provides both positive- or negative-going 80 ns pulses at a frequency range from 5 kHz to 5 MHz. The module has a series of jumper leads mounted between split lugs on the board which can be removed to select four frequency ranges. Once the proper range has been selected, the output clock frequency is determined by a plug-in crystal. The module can be effectively used in applications requiring accurate pulses at stable frequencies. Driving capability is 10 unit loads for the positive going and 9 for the negative going output pulses.

The frequency must be specified by the user and the appropriate jumpers will be removed at DIGITAL for the frequency ranges required.

The M4050 is available in several standard frequencies listed below. Be sure to list the frequency range desired when ordering. Standard frequency ranges available: 1.333 MHz; 2.0 MHz; 5.0 MHz.

Crystal Clock — M405

The M405 employs a crystal oscillator to provide a highly stable, precisely known frequency between 5 kHz and 10 MHz. The frequency within this range may be specified by the user.

Outputs at the two output pins are respectively positive and negative going 50 ns pulses. Pulses are time shifted by one gate delay with the negative pulse leading the positive pulse by a maximum of 20 ns. The output pulse width can be modified by the addition of an external capacitor to increase the output pulse width by approximately 1 ns per 2.5 pF of additional capacitance. Frequency stability is 0.01% of specified value between 0°C and +55°C. Standard stock frequencies are 1.333 MHz, 2 MHz, 5 MHz. Driving capability in unit loads is 10 for the positive going and 9 for the negative going pulses.

Multivibrator Clock — M403

The M403 is an RC Multivibrator Clock which produces standard 10-microsecond timing pulses, positive-going and negative-going, at repetition rates adjustable from 1 kHz to 50 kHz in three ranges. Internal capacitors, selected by jumper pin connection, provide coarse frequency control, while an internal potentiometer provides continuously variable adjustment within each range.

The clock circuit is enabled by a HIGH level at the ENABLE input. If a LOW level is applied, the clock output will time out.

Lower frequencies and wider pulse widths can be derived by adding external capacitance. Driving capability is 10 unit loads and 9 unit loads on positive-going and negative-going, respectively. ENABLE input is one unit load.

Multifrequency Crystal Clock — M404

The M404 clock contains a 2 MHz crystal oscillator and frequency dividers.

A HIGH on the CLEAR input (one unit load) clears the frequency divider and all outputs go LOW except the 2 MHz output, which is not affected. Maximum error from specified output frequency is 0.01% between 0°C and +55°C.

Output frequencies from the divider are 5, 10, 12.5, 50, 100, 125, 250, 500 kHz and 1 and 2 MHz.

Variable Multivibrator Clock — M401

The M401 Variable Clock is a stable RC-coupled multivibrator which produces standard 50 ns (positive or negative going) timing pulses at adjustable repetition rates.

Repetition rate is adjustable from 175 Hz to 10 MHz in five ranges. Internal capacitors, selected by jumper pin connections, provide coarse frequency control. An internal potentiometer provides continuously variable adjustment within each range.

A 0 to 10 volt control voltage will vary the frequency over about 30% of each frequency range.

A two-input OR gating input (each input is one unit load) is provided for start-stop control of the pulse train. A level change from HIGH to LOW with fall time less than 400 ns is required to enable the clock.

Output driving capability is 10 and 9 unit loads for the positive-going and negative-going pulses.

CATALOG NUMBERS VS MODEL NUMBERS

The Catalog Numbers published in this catalog relate only to purchases made through the Direct Sales Catalog. The **Bold Face** portion of each Catalog Number is the official DIGITAL Model Number. All invoices and packing slips will reference only the Model Number.

digital DIRECT SALES CATALOG

DIGITAL MODULES—M SERIES

PULSE-SHAPING, DELAYING MODULES

Delay and Stretch — M3020

The M3020 Module contains two independent monostable multivibrators, each of which is activated by the output of its own integral Schmitt Trigger circuit. A low input transition on any one of the three inputs to the Schmitt Trigger circuit produces a positive output pulse after a preset adjustable delay and triggers the multivibrator. Minimum duration of a low pulse is 50 ns. The Schmitt Trigger input provides hysteresis which prevents the multivibrator from being triggered erroneously by noise signals at the input. Each trigger input is three unit loads.

When activated, the multivibrator produces a positive pulse at the output. The width of the pulse is variable from 50 ns to 50 sec and is selected by the external connections to capacitors mounted on the M3020 and by the variable Vcc available.

The delay time is adjustable from 50 ns to 7.5 ms using the internal capacitors and can be extended by adding an external capacitor.

Output drive capability is 10 unit loads.

Pulse Amplifier/Generator — M602

The M602 contains two pulse amplifiers which provide power amplification and transform level changes into pulses. A negative pulse output is produced when the input is triggered by a transition from HIGH to LOW on any one of three (per circuit) inputs to an integral OR gate. Each input is three unit loads. An internal capacitor is brought out to pin connections to permit the standard 50 ns output pulse to be increased to 110 ns (nominal). Drive capability is 30 unit loads per amplifier.

Schmitt Trigger — M501

The M501 is a Schmitt Trigger with variable thresholds and complementary positive logic outputs. Its applications are varied and include use as a: switch filter, pulse shaper, threshold detector.

The input voltage (not to exceed ±20 volts) is compared with the thresholds set on pins UPPER and LOWER, respectively. Output goes to LOW when the input rises above the UPPER THRESHOLD, having been below the LOWER THRESHOLD. Output rises to +3 volts when the input falls below the LOWER THRESHOLD, having been above the UPPER THRESHOLD. A second output is the complement of the first.

An integrator is provided on the input, allowing switches to be connected to the Schmitt Trigger with contact bounce effects eliminated. Two switch time constants are provided: a 7 ms time constant and a 3.5 ms time constant.

Integrating One-shot — M306

The M306 is a zero-recovery-time integrating monostable multivibrator with complementary outputs. The M306 has the ability to respond to an input even while in the active state, so that successive inputs above a preset frequency can postpone the return to the inactive state indefinitely.

An input pulse (2 unit loads) of 30 ns will trigger the M306. The output pulse width is a minimum of 225 ns with maximum width limited only by capacitor leakage (40 sec is typical max.). Timing is adjusted by externally added capacitors and a multiturn potentiometer as the module. Drive capability is 11, and 12 unit loads on the positive-going and negative-going outputs, respectively.

Delay Line — M310

The M310 consists of a tapped delay line with associated circuitry and two pulse amplifiers. The total delay is 500 ns with taps available at 50 ns intervals. Applications are in timing pulse trains and pulse spacing.

The pulse amplifiers standardize the outputs of the delay line. The output of the pulse amplifier is a positive pulse whose duration is typically 50 to 200 ns. These amplifiers are not intended to be driven by TTL IC logic. Input to the delay line is three unit loads.

Outputs from the delay line must be connected to the input of the pulse amplifiers. Each pulse amplifier can drive 30 unit loads.

MISCELLANEOUS

Logic HIGH Source — M002

To hold unused M Series TTL gate inputs HIGH, the M002 provides 15 outputs at +3 volts (logic HIGH). Up to 10 unused M Series gate inputs may be connected to any one output.

The M002 can also be used as pull-ups for open-collector outputs in a wired-OR situation. If an M002 circuit is driven by a gate, it appears as two TTL unit loads or 3.2 mA at ground.

DIGITAL MODULES—M SERIES

MISCELLANEOUS (Cont'd)

Parity Circuit — M162

The M162 contains two parity detector circuits. Each circuit indicates whether the binary data presented to it contains an ODD or EVEN number of ONES by a HIGH level on specific output pins. Each input data line represents 4 unit loads. The ODD parity HIGH output can drive 6 unit loads. The ODD parity LOW output can drive 10 unit loads.

Cat. No.	Size	Circuits per Module	List	Cat.	Cash	Shipping Weight
B-M162	SSS	2	$38	$36	$35	See p. 161

MSI Module Board — W960

The W960 MSI Module Board is a single-height, standard length module board that can accommodate either two 14- or 16-pin dual-in-line package (DIP) integrated circuits (ICs) or one 24-pin DIP IC, either with or without sockets. All IC pin plated-through hole locations are identified with their associated board contact finger and are all brought out to the board contact fingers via printed circuit etching.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-W960	$9	$9	$8	See p. 161

Universal Terminator Board — W964

The W964 Universal Terminator Board is a single-height, standard length module. It is an etched and drilled module that can be used for mounting user-selected and user-supplied discrete components to provide a variety of termination or voltage source circuits for up to 28 signal pins. Each signal pin can have two components connected to ground and one component connected to +5 volts. Any discrete component can be mounted on the W964 if the physical size is approximately the size of a ¼-W resistor or disk capacitor.

Cat. No.	List	Cat.	Cash	Weight Shipping
B-W964	$11	$10	$10	See p. 161

DECODERS AND MULTIPLEXERS

Decoders — M155, M161, M163, M230

The M155 Module decodes the binary value on the four input lines into one of sixteen mutually exclusive outputs when both STROBE inputs are LOW. The de-multiplexing function is performed by using the four input lines to address the output line. When either STROBE input is HIGH, all outputs are HIGH. Any output can drive 10 unit loads. All inputs present one unit load each.

The M163 Module consists of two binary-to-decimal decoder circuits, each of which accepts four inputs and provides 10 mutually exclusive outputs. The most significant 2^3 input can be used as an enable function to allow the circuits to be used as a binary-to-octal decoder. Outputs 0 through 7 will remain HIGH as long as input 2^3 is HIGH. Any output can drive 10 unit loads. Each input presents one unit load.

The M161 is a functional decoding module which can be used as a binary-to-octal or binary-coded decimal (8421 or 2421 codes) to decimal decoder. Three ENABLE inputs are provided for selective enabling of modules in decoders of more than one octal or decimal digit. In the octal mode, the bit 2* input should be connected to ground, which automatically inhibits the 8 and 9 outputs. A HIGH and a LOW version of each output is provided. All outputs can drive 10 unit loads each. Code inputs present one unit load each; ENABLE inputs 2 each.

The M230 converts a binary number to its binary coded decimal equivalent or a binary coded decimal number to its binary equivalent.

The maximum number that can be applied to the BCD input is 4095 which will result in all ones at the binary output. The maximum value of all ones applied to the binary input will result in the value 4095 at the BCD output. This converter utilizes a counting technique where the count frequency is typically 5 MHz. Therefore, the conversion time for the maximum number is typically 0.82 millisecond. The M230 is fully cascadable. All outputs can drive 10 unit loads. Each input presents 1 unit load.

Multiplexers — M1713, M1701

The M1713 Module is a 1-of-16 data selector/multiplexer. A 4-bit binary code defines which of the 16 data inputs will be connected to the output when STROBE is LOW. All inputs present one unit load. The output can drive 10 unit loads.

The M1701 Data Selector contains two independent dual 4-line to 1-line multiplexers on a single-height module. Each dual multiplexer has two groups of DATA INPUTS, two STROBES, two OUTPUTS and common SELECT inputs (2-bits). An OUTPUT becomes active for a DATA INPUT when the DATA INPUT is addressed by the SELECT lines and the corresponding STROBE brought LOW. All inputs present one unit load each. Outputs can drive 10 unit loads each.

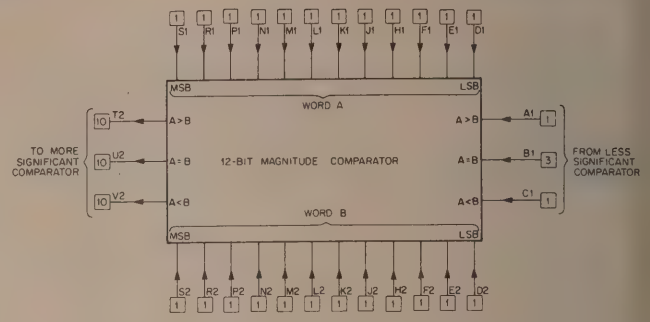
DIGITAL MODULES—M SERIES

COUNTERS AND ARITHMETIC MODULES

Magnitude Comparator, 12-bit — M168

The M168 12-bit Magnitude Comparator performs magnitude comparison of two 12-bit words. One of the three outputs, A > B, A = B or A < B will be high to indicate the relative magnitude of the two binary input words.

The M168 Comparator may be cascaded to compare longer words. The outputs T2, U2 and V2 should be connected to the corresponding inputs of the next comparator which are A1, B1 and C1 respectively. The inputs of the first comparator must all be made a logical "1."



Cat. No.	Size	List	Cat.	Cash	Shipping Weight
B-M168	SSS	$50	$48	$46	See p. 161

Up/Down Counters — M236, M237, M238

These three up/down counters are fully programmable; that is, the outputs may be preset to any state by entering the desired data at the DATA inputs while the LOAD input is LOW. The output will change to agree with the DATA inputs independently of the COUNT pulses, This feature allows the counters to be used as modulo-N dividers by simply modifying the count length with the preset inputs. These counters were designed to be cascaded without the need for any external circuitry.

The M238 Module consists of two identical 4-bit binary counters. Synchronous operation is provided by having all flip-flops clocked simultaneously so that the outputs change coincidentally with each other.

The outputs are triggered by a LOW to HIGH level transition of either COUNT input. The direction of the counting is determined by which COUNT input is pulsed while the other COUNT input is HIGH. All outputs can drive 10 unit loads. All inputs present one unit load each.

The M236 is a 12-bit synchronous binary up/down counter. It has a single control input that can switch the counting mode from up to down without disturbing the contents of the counter. Counting occurs on a positive transition of the COUNT IN line. This input must remain LOW for at least 50 ns before the count. Time between pulses can be no less than 50 ns. There is no maximum for pulse width or time between pulses. The maximum count frequency is 10 MHz. The ENABLE input permits counting while it is HIGH, and disables counting while it is LOW. All outputs can drive 10 unit loads. ENABLE and COUNT inputs present one unit load. LOAD and UP/DOWN control present three unit loads each. Data inputs present one load each.

The M237 is a 3-digit synchronous BCD up/down counter. It has a single control input that can switch the counting mode from up to down without disturbing the contents of the counter. Counting and ENABLE action is the same as described above for the M236. So, too, are load/drive capabilities.

Cat. No.	Size	Description	Counters per Module	List	Cat.	Cash	Shipping Weight

B-M236	SSS	12-bit bin.	1	58	55	53	
B-M237	SSS	3-digit BCD	1	58	55	53	

Counter/Register, 4-bit — M239

The M239 Module consists of three high-speed, four flip-flop stage elements. It provides 12-bit data storage or a serial counter with 12-BCD outputs. All inputs and outputs are TTL or DTL compatible with a drive capability of 10 unit loads (TTL). All inputs present one unit load each. Each of the 12 flip-flops has a data line input, and data information is entered by a COUNT/LOAD signal associated with each 4-bit stage. The output of the flip-flops assumes the logic state of the data inputs when the COUNT/LOAD input signal is HIGH. When the COUNT/LOAD signal is LOW, the data inputs are disabled, provided the clock inputs are inactive.

The Q_A output of each latch within a 4-stage element is connected to the toggle (T) input of the following latch. This allows the module to be used as a high-speed counter or serial-to-BCD converter.

The counters will accept frequencies of 0-50 MHz at the CLOCK 1 input, and the transfer of information to the outputs occurs at the positive-going edge of this clock pulse.

LOGIC HANDBOOK

The Logic Handbook, known as the computer industry's "bible" on logic design, gives you the technical story on general purpose computer interfacing, various cable configurations, system boxes and enclosures, special purpose interfaces and a host of other compatible equipment.

For almost twenty years, the Logic Handbook has been regarded as the one reference book for customers for the world of interfacing and DEC products. Have your own resident DEC sales and technical consultant — the Logic Handbook. Over 400 pages.

digital DIRECT SALES CATALOG

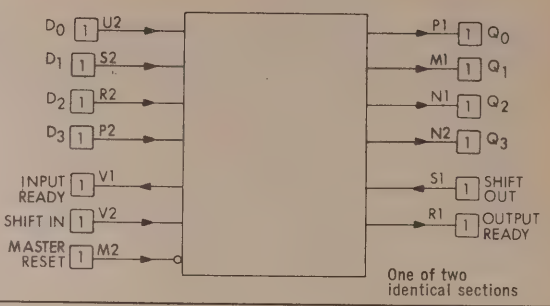
DIGITAL MODULES—M SERIES

MEMORY AND REGISTERS MODULES

Serial FIFO Memory — M2500 / 64 4-bit Words (Dual)

The M2500 Module provides storage for 64 4-bit words in each of two memory elements. The words are stored and read asynchronously on a first-word-in, first-word-out basis. By series coupling the two memory elements, the total storage capacity can be increased to 128 4-bit words. The two memory elements can also be paralleled, using external logic, to form storage for 64 8-bit words.

Cat. No.	Size	Elements per Module	List	Cat.	Cash	Shipping Weight
B-M2500	SSS	2	$83	$79	$76	See p. 161



Shift Register, 4-bit (Dual) — M245

The M245 Module consists of two 4-bit shift registers with both serial and parallel data entry capability. They are shift-right only registers; that is, the output data is shifted from A toward D.

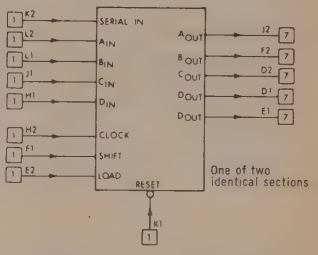
Three control modes are possible: serial shift right, parallel enter mode, and no change or hold mode. These control modes are chosen by inputs at the SHIFT and LOAD lines.

In the serial mode of operation, data present at the SERIAL INput, when the SHIFT input is High, is loaded on the Low-going edge of the CLOCK pulse.

In the parallel entry mode, data present at the data inputs A IN through D IN, when the LOAD line is High, is loaded on the Low-going edge of the CLOCK pulse.

The hold mode is created by holding both the LOAD and SHIFT lines Low. By doing this, the CLOCK pulse will have no effect on the output, regardless of data present at the SERIAL INputs or DATA INputs.

A RESET line has been provided for the registers which will clear the internal flip-flop circuitry.



Cat. No.	Size	Registers per Module	List	Cat.	Cash	Shipping Weight
B-M245	SSS	2	$31	$29	$28	See p. 161

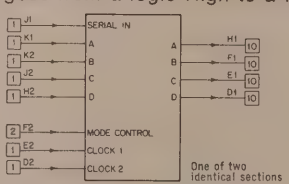
Shift Register, Multipurpose 4-bit (Dual) — M248

The M248 Module consists of two 4-bit Shift registers — multipurpose in the fact that they are capable of either serial or parallel entry, shifting right, or with simple external connections, shifting left.

When a logic LOW is applied to the MODE CONTROL input, a shift right operation is performed by clocking at the CLOCK 1 input. In this mode, serial data is entered at the SERIAL INput. CLOCK 2 and parallel inputs A through D are inhibited.

When a logic HIGH is applied to the MODE CONTROL input, it allows entry of parallel data through inputs A through D and CLOCK 2. This mode permits parallel loading of the register or, with external interconnection, shift left operation. In this mode, shift left can be accomplished by connecting the output of each flip-flop to the parallel input of the previous flip-flop; that is, D output to C input, etc., and serial data is entered at input D.

Two clock inputs are available which permit separate clock sources to be used for the shift right and shift left modes. If both modes can be clocked from the same source, the clock input may be applied to both CLOCK 1 and CLOCK 2. The transfer of information to the output pins occurs when the clock input goes from a logic High to a logic Low.



Cat. No.	Size	Registers per Module	List	Cat.	Cash	Shipping Weight
B-M248	SSS	2	$28	$27	$25	See p. 161

Tri-state Register, 4-bit (Dual) — M2001

The M2001 is a dual, 4-bit register module consisting of D-type flip-flops and input and output gating. It provides a total of eight bits of data storage and outputs to interface directly to system bus. All input and output signals are through edge board connector. Each of the module output contains a tri-state circuit capable of driving low-impedance, high-capacitance loads without the use of pull-up or interface components. The third state of the output is a high-impedance state and is selectable by logic levels to the input of the module. This state effectively disconnects the register outputs from the bus when no information transfer is required. Up to 128 of these outputs can be connected together in a wired-OR configuration. All inputs present one unit load. All outputs can drive 10 unit loads each.

COMMUNICATIONS

Asynchronous Transceiver — M7390

The M7390 Asynchronous Transceiver Module is a complete serial-line interface for use with data communications equipment. Full-duplex operation, selectable baud rates, parity selection, and programmable word length features provide this module with considerable flexibility. It contains input/output level converters (for 20 mA current loop or EIA RS-232-C signals), parallel-to-serial and serial-to-parallel converters (for transmitting and receiving asynchronous serial data), and a crystal-controlled clock (for frequency stability) and frequency-divider circuitry (for variable transmission and reception rates) on a single module.

The transmitter section of the module accepts parallel data from either a terminal device or a computer, serializes it, formats it by appending selected control and error-detecting bits, and transmits this word serially.

The receiver section accepts serial data, converts it to parallel information, checks the received word for the correct control and error-detecting bits, and presents the parallel word at the output terminals of the module.

Cat. No.	Size	List	Cat.	Cash	Shipping Weight
B-M7390	EDS	$218	$207	$198	See p.161

EIA Level Converter — M594

The M594 Module is used to convert the signal voltage levels between DIGITAL data processing terminal equipment such as the DF11 Modem and data communications equipment such as a Bell data set. The M594 provides circuits to convert a maximum of eight EIA or CCITT signal levels to eight DTL or TTL signals that are compatible with DIGITAL logic, and circuits to convert a maximum of seven DIGITAL, TTL, or DTL logic signal outputs to seven signals compatible with EIA or CCITT signal devices. Refer to EIA Standard RS-232-C for description of the selected signals.

Cat. No.	Size	List	Cat.	Cash	Shipping Weight
B-M594	SSS	$94	$89	$86	See p. 161

Optic-coupled 20 mA Loop Interface — M598

The M598 module contains a single-channel transmit and a single-channel receive circuit capable of converting the data signals between a Teletype® or similar current loop device and TTL or DTL compatible logic circuits. The data signals transferred through each of the module circuits are optically-coupled to provide a maximum of 1500V isolation between the current loop and the TTL logic. The transmitter receives serial TTL or DTL compatible levels and controls an output current loop with a maximum current of up to 80 mA.

The M598 module is supplied with jumper leads installed to operate as a passive element providing no current to the current loop device. By rewiring the jumper leads on the transmitter and receiver circuits, the module can be an active element and supply current from a +5V dc or −15V dc source.

Cat. No.	Size	List	Cat.	Cash	Shipping Weight
B-M598	ESS	$77	$73	$70	See p. 161

Teletype® Transmitter — M707 / Teletype® Receiver — M706

The M707 Teletype® Transmitter is a parallel-to-serial teletype code converter self-contained on a double height module. This module includes all of the parallel-to-serial conversion, buffering, gating and timing (excluding only an external clock) necessary to transfer information in an asynchronous manner between a parallel binary device and a serial data line or teletype device.

The M706 Teletype® Receiver is a serial-to-parallel teletype code converter self-contained on a double height module. This module includes all of the serial-to-parallel conversion, buffering, gating, and timing (excluding only an external clock) necessary to transfer information in an asynchronous manner between a serial data line or Teletype® device and a parallel binary device.

The M707 and M706 Module include the necessary gating so that they can be used in a half-duplex system with each other. Device selector gating is also provided so that these modules can be used on the positive bus of either the PDP8/I or the PDP8/L.

Optic Isolators Input/Output — M5864/M6865

The M5864 Optic Isolator Input Module and the M6865 Optic Isolator Output Module are used to electrically isolate and/or convert signal levels between peripheral devices and a TTL-compatible interface of a processor or controller system. The M5864 interconnects with the DR11-L Two-Word Input UNIBUS Interface. M6865 interconnects with the DR11-M Two-Word Output UNIBUS Interface.

Each module contains 20 optically-coupled circuits, each of which provides signal isolation between the input and output of the module. The data signals are optically-coupled to provide a maximum of 1500V isolation between the current loop and the TTL logic. The M5864 Input Module has 18 input circuits that accept levels from current-producing devices and convert these signals to TTL-compatible levels. Each TTL can drive 10 unit loads.

Two **output** circuits accept TTL-compatible levels from the interface and control the conduction of two floating transistor outputs whose outputs are capable of switching 8 mA current each.

Conversely, the M6865 Output Module has 18 output circuits that accept TTL-compatible levels from the interface to control the conduction of the 18 floating transistors in the optic couplers. Each TTL input is 10 unit loads while each of the transistor outputs is capable of switching 1.6 mA of current. As with the M5864, the data signals are optically-coupled to provide a maximum of 1500V isolation between the current loop and the TTL logic. Two **input** circuits receive controlling signals from current-producing devices and convert these signals to TTL-compatible levels.

ANALOG MODULES—A SERIES

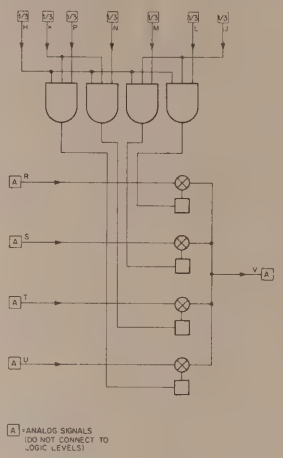
A Series analog modules support the M Series by providing a two-way translation between continually varying real-world voltage measurements and the digital realm of control and computation. The A Series emphasizes 10- and 12-bit performance in a family of mutually compatible functions — multiplexers, operational amplifiers, and A/D converters.

Analog Multiplexer — A123

The A123 Multiplexer provides 4 gated analog switches that are controlled by logic levels of 0V and +3V. The module is equivalent to a single-pole, 4-position switch, since the output terminals of each MOS FET switch are tied together. If all three digital inputs of a gating circuit are at +3V (or not connected), MOS FET switch is "closed." If any digital input is a 0V, the related switch is "open." Two switches should not be on at the same time. The analog switch can handle signals between +10V and −10V, with currents up to 1 mA.

The positive power supply must be between +5V and +15V, and at least equal to or greater than the most positive excursion of the analog signal. The negative power supply must be between −5V and −20V, and at least 10V more negative than the most negative excursion of the analog signal. The voltage difference between the two supplies must not be more than 30V.

Cat. No.	Size	List	Cat.	Cash	Shipping Weight
B-A123	SSS	$75	$71	$68	See p. 161

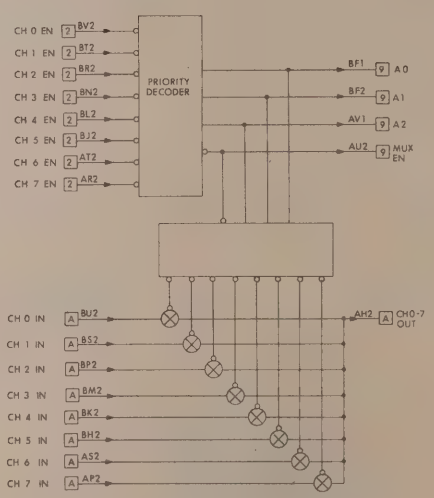


Analog Multiplexer, 8-channel — A126

The A126 is an eight-channel, high-impedance multiplexer module with each channel controlled by an associated enable input. The conduction or non-conduction of each channel is controlled by FETs and the channel outputs are connected together to a common terminal. Each channel is capable of switching bipolar (±12V) analog signals and is protected against random switching in the event of overvoltage and power down or loss of power conditions.

The enable inputs, associated with each channel, are priority encoded to ensure that only one channel is connected to the output at a time. Therefore, more than one channel enable input can be asserted at one time. Channel 0 is the highest priority and Channel 7, the lowest priority. The enable signals required are TTL or DTL compatible levels. Three TTL outputs are provided for identifying the selected channel, and one TTL multiplexer enable output indicates that one of the eight channels has been selected. The selected channel number is specified by an octal code on lines A0-A2.

Cat. No.	Size	List	Cat.	Cash	Shipping Weight
B-A126	SDS	$83	$79	$76	See p. 161

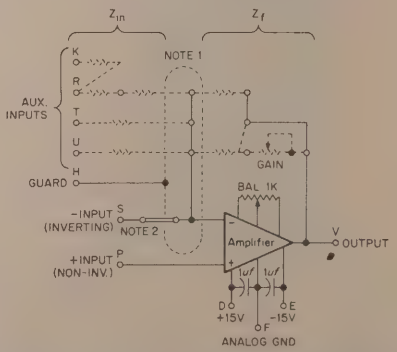


Operational Amplifier — A207

The A207 is an economical Operational Amplifier featuring fast settling time (5 μs to within 10 mV), making it especially suited for use with Analog-to-Digital Converters. The A207 can be used for buffering, scale-changing, offsetting, and other data-conditioning functions required with A/D Converters. All other normal operational amplifier configurations can be achieved with the A207.

The A207 is supplied with a zero balance potentiometer. Provisions are made on the board for the mounting of input and feedback components, including a gain trim potentiometer. The A207 is pin-compatible with the A200 Operational Amplifier. DC open loop gain, 670 ohm load is 15,000 min. and slewing rate is 3.5V μs min. Max. output is ±10V dc at 15 mA. Input voltage range is ±10V dc. Input impedance is 100K ohms min. with an input offset drift vs. temperature of 60 μV/°C. Temperature range is 0°C to 60°C.

Cat. No.	Size	List	Cat.	Cash	Shipping Weight
B-A207	SSS	$57	$54	$52	See p. 161



NOTE 1. Mounting holes are provided on the module so that input and feedback components can be added. Components shown with dashed lines are not included with the module.

NOTE 2. This jumper comes with the module. It may be removed to suit circuit requirements.

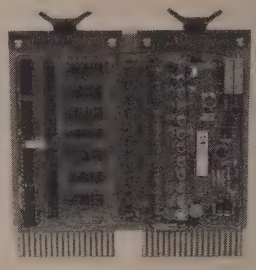
ANALOG MODULES—A SERIES

A/D Converter, High Speed, 12-bit Bipolar — A866



The A866 is a 12-bit general purpose analog-to-digital converter module which uses the successive approximation technique. The A866 is designed to accept unipolar or bipolar single-ended analog voltage as input and convert it to a 12-bit TTL-compatible, coded digital output. The coded digital output is parallel data and is available for application to a computer, terminal, display, or other logic device.

the selection of unipolar or bipolar and voltage range of the analog input is determined by jumper leads mounted on the module circuit board. he module has factory-installed jumpers that permit its use with bipolar, 10V full-scale extended-range inputs. By changing the jumper configuration, the user can select bipolar or unipolar, 5V or 10V full scale extended or non-extended input ranges.

The A866 can be used wherever fast, accurate analog-to-digital conversions are required.

The high input impedance (100 megohms) at the analog inputs minimizes the signal source loading, and the fast conversion time permits an encoding rate at the output of 16,000 coversions per second.

The digital output data, the output control and status signals, and the input control signals are all TTL-compatible.

Three outputs are provided to indicate the status of the conversion process. The BUSY output becomes high and remains high while the conversion process is active. The BUSY output becomes low 50 ns after the data is available at the output and remains low until the next command to start the conversion.

The DONE output is the complement of the BUSY level.

The EOC PULSE output becomes a high level for 450 ±50 ns after the DONE output level goes high.

The CLOCK output is a series of 50 ns pulses (min.) generated when the A866 Module is performing an analog-to-digital conversion.

Detailed information on the module is available on the A866 A/D Converter Module (12-bit, 15-microsecond) data sheet. Contact Catalog Sales Desk for a free copy.

PDP-8 AND PDP-11 INTERFACE MODULES

PDP-8 AND PDP-11 COMPUTER INTERFACE MODULES

Included in this section are some of the many modular interfaces designed to operate with DIGITAL's PDP-8 and PDP-11 computers. Like the other modules in this catalog, these interface modules are fully described in the Logic Handbook which is available to you free of charge. Consult Catalog Sales Desk.

PDP-8/A, 8/E, 8/F, 8/M (OMNIBUS) INPUT/OUTPUT MODULES

One-word Input, 12-bits — M1703

The M1703 provides, on a single quad-height module, a complete, self-contained interface that will input 12 bits of parallel TTL-level data to the PDP-8/A, 8/F, 8/E or 8/M OMNIBUS, under interrupt or programmed I/O control. The M1703 plugs directly into the OMNIBUS connector assembly, and the external device plugs into a 40-pin flat cable connector on the module itself. The module includes a device selector, an operation decoder, flags, and all control logic needed to request interrupt and respond to programmed I/O commands on the OMNIBUS.

Two-word Input, 24-bits — DR8-ED

The DR8-ED is a complete, general purpose input interface used to transfer two independent 12-bit, parallel data words from a user's peripheral device to a PDP-8 computer system. It is directly compatible with the OMNIBUS of a PDP-8/A, 8/E, 8/F or 8/M and is designed for installation in any available OMNIBUS slot except 1, 2 and 3 of a PDP-8/A. See diagram below.

The DR8-ED consists of a device selector and IOT decoder logic, interrupt request and skip control, and two 12-bit Data Buffer Registers (DBRs) — one for each data word, and two independent Control and Status Registers (CSRs). One CSR is assigned to each input data word and provides status and control information during word transfers.

The DR8-ED is designed for user application and requires a minimum of external hardware to implement into a PDP-8 system. Two 40-pin connectors are conveniently mounted near the edge of the board to permit either one or two devices to be easily connected using BC08R, BC07D, or BC04Z flat cable assemblies available from DIGITAL. These cables have mating connectors pre-mounted and can be supplied in any required length.

The interface module occupies one slot in the OMNIBUS or expander and is quad-height, extended-length, single-width board.

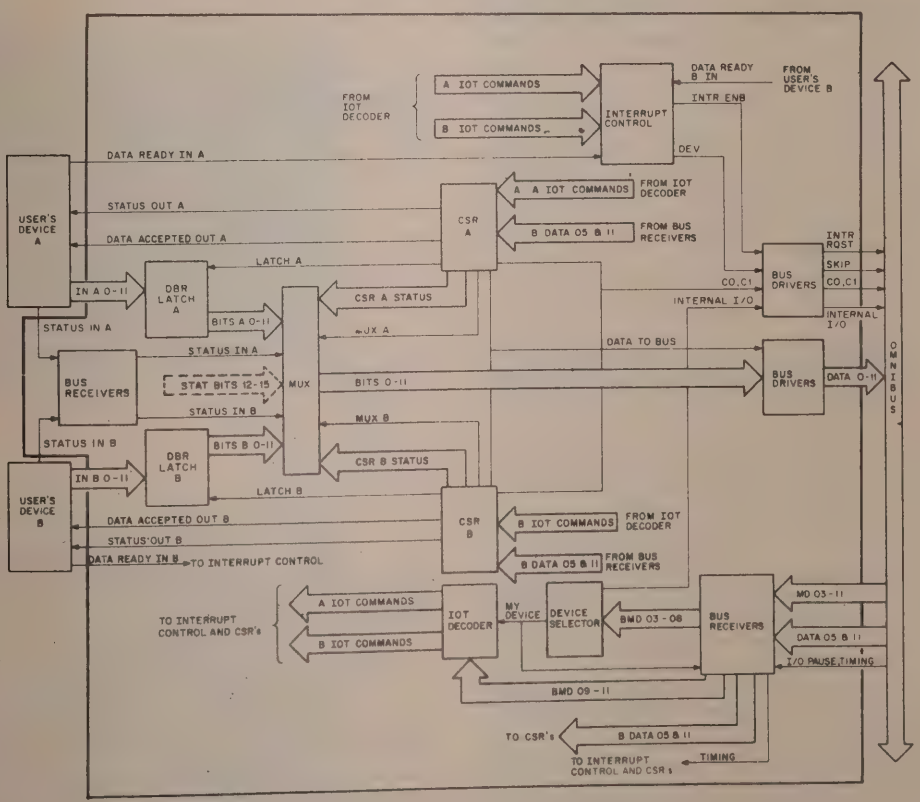

Figure 2 DR8-ED Functional Block Diagram

digital DIRECT SALES CATALOG

PDP-8 COMPUTER INTERFACE MODULES

INPUT/OUTPUT MODULES (Cont'd)

Two-word Output, 24-bits — M1705

The M1705 is an output interface module that allows the PDP-8 computer to transfer data to, and control the operation of, remotely programmable instruments of similar digital devices. The function is to perform parallel transfers, under program or interrupt control, of 12-bit data words from the computer to peripheral devices.

The M1705 consists of duplicate logic sections. Each section includes device selection logic to address an external device, an operations decoder to determine the type of interface operation, a 12-bit storage register to buffer the output data, interrupt control logic, and bus drivers/receivers to allow operation on the OMNIBUS. Connection to the device(s) is made via standard cables that plug into a pair of connectors on the M1705 module board.

M1705 is quad-height, extended length and single width.

B-**DR8-ED**	24-bit Input	EQS	**325**	**309**	**296**	3 lbs.

Interface Foundation Module — M1709

The M1709 OMNIBUS Interface Foundation module is a generalized OMNIBUS interface card that is constructed to allow the user to build a custom design using integrated circuits (ICs). All required OMNIBUS interface logic, i.e., bus drivers/receivers, device selectors, and interrupt/skip circuitry is provided. IC mounting pads with wire wrappable pins are made available for custom circuitry. Pads accommodate all common types of Dual-In-Line Pack (DIP) ICs with up to 40 pins.

Connection to user-equipment is made via standard cables (BC08R, BC07D, or BC04Z) that plug directly into the M1709 module board. The module cable connector allows several M1709 modules or W966/W967 wire wrappable modules to be strapped together to accommodate more extensive designs.

Cat. No.	Size	List	Cat.	Cash	Shipping Weight
B-**M1709**	EQS	**$142**	**$135**	**$129**	See p. 161

Wire Wrappable Boards — W966 and W967

The W966 Wire Wrappable Module is a PDP-8/A, 8/E, 8/F, 8/M general-purpose module that provides for construction of custom interface designs using integrated circuits (ICs) and wire wrapped interconnections. Up to 42 of 14- and/or 16-pin ICs can be easily mounted (with or without 16-pin sockets) onto the etched IC pads. Sockets are not supplied with W966 but are with W967, see below. Each wire wrap pin can accommodate two separate leads of 30-gauge wire. Discrete components may also be directly soldered onto the IC pads. Position E39 features a pad that can be used for mounting a potentiometer.

The W967 Wire Wrappable Module is identical to the W966 except that featured on the board are 42 low-profile IC sockets which easily accommodate 14- and/or 16-pin ICs. Each wire wrap pin can accommodate two separate leads of 30-gauge wire. Discrete components may also be directly inserted into the sockets. Position E39 features a pad that can be used for mounting a potentiometer by removing the socket.

Both modules have 72 etched contact fingers at the handle end, with a wire wrap pin connected to each finger. When a W966 or W967 is located adjacent to another W966 or W967, signals can be bused from one module to the other via these contact fingers by using an H851 edge connector. One H851 can bus 36 signals; therefore, two H851s are required to bus all 72 signals. In addition, the standard 144 contact fingers at the connector end of the module are also connected to wire wrap pins.

An H854 40-pin I/O connector (male) is contained on the module to provide access to the "outside world;" it can accept any cable equipped with an H856 connector. Eighteen of these connector pins are connected to wire wrap pins.

INTERFACE CONTROLS

Bus Output Interface — M1502

$60

The M1502 is a versatile buffered output interface for up to 16 data bits, arranged in two 8-bit bytes. The module accepts data from the UNIBUS Data lines and stores it in a 16-bit register. Outputs are supplied both to a 40-pin flat ribbon connector and to the backplane. Open-collector output drivers with pull-up resistors are included on the module. Three flip-flops with Type D as well as Type RS inputs are provided as flags or synchronizing devices.

Although intended for parallel data output, this module may be used to drive indicators or small relays provided the voltage and current limits are not exceeded.

Up to four M1502 modules (64-bits) can be controlled by one M105 Address Selector Module, one M7821 Interrupt Control Module, and one M1500 Bus Gates Module.

Interrupt Control Module — M7821

$110

The M7821 Interrupt Control Module is used with the interface logic of a device in the PDP-11 systems. The M7821 allows one or two devices that request an interrupt to gain access to the UNIBUS and become bus master for one or more data transfers. It also provides a vector control circuit to enable the selection of an address in memory at which the device subroutine is stored.

The module consists of an A Master Control, B Master Control, and Vector Control logic. Either of the two master control circuits can be used to generate a Non-Processor Request (NPR) for direct data transfers to memory (DMA) or a Bus Request (BR) which interrupts the current processor program. The A Master Control, however, is normally used for generating the NPR and the B Master Control for the BR. When used as a DMA Control, the A Master Control has the ability to perform a burst mode block transfer which allows more than one data cycle to be performed each time the device becomes bus master.

The B Master Control contains logic which can be implemented to allow the monitoring of the bus NPR line. This capability permits an NPR initiated by a device to be honored under certain conditions and the device to gain access to the bus even though a BR from another device has occurred prior to the NPR. A jumper lead can be removed from the module to disable this feature if the B half is used for NPR transfers.

digital

DIRECT SALES CATALOG

PDP-11 INTERFACE MODULES

INTERFACE CONTROLS (Cont'd)

Address Selector — M105

$86

The M105 is used in PDP-11 device interfaces to decode the UNIBUS Address and Control lines. It provides gating signals for up to four device registers that indicate a register is being referenced and three control signals that indicate the direction for data flow.

Bidirectional Bus Interfacing Gates — M1500

$20

This module provides gating arrangements useful for interfacing to the PDP-11 computer. It is designed specifically to provide additional gating and output drive when using the M1501-M1502 Input/Out modules. Applications are:

General-Purpose Use:

1. Providing general-purpose high fan-out drivers.
2. Providing a stage of inversion with high fan-out capability.

PDP-11 Interfacing:

1. ANDing SELECT signals with direction signals (OUT HIGH, OUT LOW) to load registers.
2. ANDing SELECT signals with direction signals (OUT HIGH, OUT LOW) to form set or reset pulses.
3. Receiving the INIT (initialize) signal from the UNIBUS and distributing it via high-power drivers.

Bus Input Interface — M1501

$35

The M1501 contains 16 bus drivers for interfacing parallel input data to the PDP-11 UNIBUS. The module includes two control flags that can be used for interrupt request and enable. Data inputs from an external device enter a 40-pin flat cable connector mounted on the module itself. All inputs are diode-clamped to ground and +5V. Up to four M1501 Modules (64-bits) can be controlled by one M105 Address Selector Module, one M7821 Interrupt Control Module, and one M1500 Bus Gates Module.

Word Count and Bus Address Module — M795

$217

The M795 Word Count and Bus Address Module can be used to provide two of the essential elements of an interface which connects Direct Memory Access (DMA) devices to the UNIBUS. This module contains two 16-bit counters. One counter is used to count the number of data transfers that occur. The other counter is used to specify sequential bus addresses for the sources and/or destinations of the data to be transferred. This module is used to interface direct memory access (DMA) devices to the UNIBUS.

UNIBUS Master Control — M796

$108

The M796 UNIBUS Master Control Module provides the necessary logic to enable a peripheral device to perform a bus cycle on the UNIBUS to transfer data. In addition to controlling the four transfer operations (DATI, DATIP, DATA, and DATOB), the M796 module generates strobe and gating signals which transfer both address and data to and from the bus; handles de-skewing of data received from the bus; protects against data transfers to nonexistent devices by the use of time-out circuits; and provides a flip-flop and integrating one-shot that can be used by the customer for special control functions.

Any device in the PDP-11 system may have the capability of gaining control of the bus and, as bus master, of transferring data to and from other slave devices on the bus. This operation is performed independently of processor control and is usually referred to as Direct Memory Access (DMA). The logic necessary to gain control of the UNIBUS is provided by the M7821 Interrupt Control Module.

UNIBUS DRIVERS/RECEIVERS

UNIBUS Drivers — M783

$40

The M783 consists of 12 low-leakage bus drivers to be used as an input interface to the UNIBUS of the PDP-11. Each driver is open-collector and is capable of sinking 50 mA with a collector voltage of less than 0.8V. The output high leakage current is 25 microamperes maximum. Pin D2 is a TTL output that allows additional drivers to be controlled by the single enabling gate (inputs H1 and F1). Pin U1 provides +3V as a source of logic HIGH for 10 TTL loads.

UNIBUS Drivers — M798

$40

This module consists of 16 non-inverting UNIBUS drivers with pull-up resistors on the inputs. The module is used in device interfaces to minimize the loading effect caused by attaching several drivers to the same UNIBUS signal line, as in the case of a device containing multiple registers. Loading of signal lines on the UNIBUS is restricted to the equivalent of one UNIBUS receiver input and two UNIBUS driver outputs per device.

In addition, the M798 Module allows the UNIBUS to be driven by standard open-collector TTL gates. The inputs to each M798 driver circuit are pulled up to +5V through a 1-kilohm resistor.

UNIBUS Receivers — M784

$40

The M784 consists of 16 high-impedance inverting bus receivers that are used as an output interface from the UNIBUS of the PDP-11. All inputs present one UNIBUS receiver load. Each output has a fan-out capability of seven standard TTL loads.

PDP-11 INTERFACE MODULES

UNIBUS DRIVERS/RECEIVERS (Cont'd)

UNIBUS Transceiver — M785

$50

The M785 consists of eight drivers and eight receivers for use as a device interface with the PDP-11 UNIBUS. Pin U1 provides +3V and has an output capability of 10 TTL loads. Driver gates have open collectors and are capable of sinking 50 mA with a collector voltage of less than 0.8V. The output high leakage current is 2.5 μA maximum.

UNIBUS IC Receiver — 956

$17

The 956 is a package of ten 14-pin, dual-in-line package (DIP) DEC8640 integrated circuits (ICs). Each IC comprises four 2-input NOR gates. The DEC8640 gates are especially suitable as UNIBUS receivers because of their high impedance characteristics and, hence, minimal loading on the bus.

UNIBUS IC Drivers — 957

$26

The 957 is a package of ten 14-pin, dual-in-line package (DIP) DEC8881-1 integrated circuits (ICs). Each IC comprises four 2-input NAND gates. The DEC8881-1 ICs are especially suitable by UNIBUS drivers because of their capability to sink 70 mA with a collector voltage of less than 0.8V.

MEMORY INTERFACES

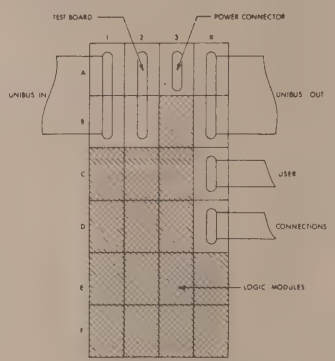
Direct Memory Access Interface — DR11-B

$1474

The DR11-B is a general purpose direct memory access (DMA) interface to the UNIBUS. The DR11-B, rather than using program controlled data transfers, operates directly to or from memory, moving data between the UNIBUS and the user device.

The interface consists of four registers: command and status, word count, bus address, and data. Operation is initialized under program control by loading word count with the 2's complement of the number of transfers, specifying the initial memory or bus address where the block transfer is to begin, and by loading the command/status register with function bits. The user device recognizes these function bits and responds by setting up the control inputs. If the user device requests data from memory or a UNIBUS device, the DR11-B performs a UNIBUS Data In transfer (DATI) and loads its data register with the information held at the referenced bus address. The outputs of this register are available to the user device. (This output data is buffered.) If the user device requests data to be written into memory, the DR11-B performs a UNIBUS Data Out transfer (DATO), moving data from the user device to the referenced bus address. (This input data from the user is not buffered.) Transfers normally continue at a user defined rate until the specified number of words are transferred.

The user is given a number of control lines allowing for flexible operation. Burst modes, read-modify-restore operations, and byte addressing are possible with the control structure.



DR11-B SYSTEM UNIT

The DR11-B is packaged in one standard System Unit allowing convenient incorporation into a PDP-11 system. A UNIBUS jumper module (M920) is supplied with the unit.

Connections to the user device are made through two M957 split lug cable boards or one M9760 cable connector board. The two M957's are supplied with the unit. Alternatively, an M920 can be used to jumper all user signals to an adjacent BB11 blank mounting panel, which can be used to hold some or all of the device logic. (Neither the additional M920 nor the BB11 is supplied with the unit.)

DECkit — Direct Memory Access — KIT11-D

$774

A kit is basically a collection of logic modules assembled by the user to a prewired system unit, capable of performing a highly complex computer interface at low cost to the user.

The kits are defined in full or maximum configuration; i.e., the system unit wiring and the recommended complement of modules define the maximum I/O capability. If the user wishes, a lesser capability may be achieved by removing the appropriate modules.

The KIT11-D kit is designed specifically for the PDP-11 owner who requires high I/O data transfer rates. Full 16-bit data words can be transferred between the PDP-11 memory and an external device at UNIBUS speeds. The KIT11-D interface kit is physically and electronically compatible with all PDP-11 Family computers.

Parallel digital data is cabled directly to and from the interface kit; no additional logic or hardware is required to handle TTL-compatible data. External devices, such as lab instruments, mass storage units, display, pre-processors, and other CPUs can communicate conveniently with the PDP-11 memory.

The prewired backplane includes five unused module slots that can be used for custom logic such as level shifters and counters. Even modules for simple processing logic can be utilized in these unused slots.

KIT11-D is valuable to the OEM and the end-user. The predesigned interface concept frees the system designer from the complex problems usually associated with UNIBUS interfacing and the end-user has available the flexibility and speed of the UNIBUS for data transfers.

digital

PDP-11 INTERFACE MODULES

DIRECT SALES CATALOG

DECkit — Direct Memory Access — KIT11-D (Cont'd)

Hardware/Accessories for DECkit11 Series

If mounting space is available in the existing PDP-11 processor mounting box, the DECkit can be installed there and jumpered to the existing panels by a UNIBUS Connector Module, M920*. Power is supplied from the processor power supply, or from an additional H720-E* Power Supply.

If the Interface Kit is installed in a separate mounting rack, the UNIBUS is extended to that rack with a BC11A cable. This cable is available in various standard lengths from 2 ft. to 35 ft.; see elsewhere in this catalog.

Input/Output Cables

Type	Connectors

PARALLEL I/O INTERFACES

Instrument Remote Control Interface — M1623 $150

The M1623 is a PDP-11 Interface Module containing the bus receivers and control logic needed to remotely program several types of digital voltmeters and programmable power supplies. All outputs to the instrument are through a 40-pin cable connector mounted on the module.

Some of the digital voltmeters and power supplies that can be interfaced by the M1623 are:

Digital Voltmeters

Fluke	Models 8200A, 8400A
Hewlett-Packard	Models 3450A, 3480A
Data Precision	Series 2000
Systron-Donner	Model 7110
Dana	Model 4800

Programmable Power Supplies

Fluke	Models 4210A, 4216A, 4250A, 4265A
Hewlett-Packard	Models 6130B, 6129B, 6131B

The user should first compare the interfacing requirements of his particular instrument with the capabilities of this module. Many instrument manufacturers have various control options which should be chosen carefully for compatibility with the M1623.

DVM Data Input Interface — M1621 $126

The M1621 is a PDP-11 Interface Module containing all the bus drivers and control logic needed to input TTL-level information from several types of digital voltmeters and multimeters. All inputs from the instruments enter a 40-pin cable connector mounted on the module.

Some of the digital voltmeters and multimeters that can be interfaced by the M1621 are:

Fluke	Models 8200A, 8400A
Hewlett-Packard	Models 3450A, 3480A
Data Precision	Series 2000
Systron-Donner	Model 7110
Dana	Model 4800

The user should first compare the interfacing requirements of his particular instrument with the capabilities of this module. Many instrument manufacturers have various control options which should be chosen carefully for compatibility with the M1621.

UNIBUS Interface Foundation Module — M1710 $250

The M1710 UNIBUS Interface Foundation Module is a general-purpose board that provides for the construction of custom interface designs using integrated circuits (ICs). The M1710 lets users build their own interfaces between a wide variety of peripheral equipment and any PDP-11 processor. All essential UNIBUS logic, such as device address selection, interrupt circuitry, and bus receivers and drivers, is provided on the lower portion of the module. The remainder of the board contains IC mounting pads with wire wrappable pins for custom logic designs. These pads accommodate combinations of all common type of DIP (dual-in-line-package) integrated circuits with up to 40 pins.

The M1710 is a versatile module, ideal for any type of application. The end user, such as a university laboratory familiar with ICs, will appreciate both the capabilities and cost-effectiveness of the module; no additional mounting panel or power supply is required. These features, coupled with the fact that the M1710 is capable of automatic wire wrapping, also should prove valuable to the Original Equipment Manufacturer (OEM) who requires many custom interfaces. And, in all cases, the module is easily a adaptable to accommodate any changes in interface design.

The M1710 plugs into any Small Peripheral Controller (SPC) slot, or DD11 Peripheral Mounting Panel. Additionally, it may be used in a system unit such as the BB11. Connection to user equipment is made via a cable connector mounted on the M1710 Module.

16-Bit Relay Output Interface — M1801 $355

The M1801 is a PDP-11 Interface Module containing the bus receivers, relay drivers and control logic needed to program 16 isolated single-pole relay contacts. The relay contact outputs are available at two 40-pin cable connectors mounted on the module.

PDP-11 INTERFACE MODULES

PARALLEL I/O INTERFACES (Cont'd)

UNIBUS INTERFACES MULTIWORD

One-word Input / One-word Output — DR11-C

$491

The DR11-C is a general-purpose interface between the PDP-11 UNIBUS and a user's peripheral. The DR11-C provides the logic and buffer register necessary for program-controlled parallel transfers of 16-bit data between a PDP-11 System and an external device.

It is directly compatible with the PDP-11 UNIBUS and is designed for installation into any one of the available Small Peripheral Controller slots (SPC) of a DD11 System Interfacing Unit and PDP-11 processor unit.

The DR11-C interface consists of three functional sections: address selection logic, interrupt control logic and device interface logic.

The DR11-C is designed for user applications and requires a minimum of external hardware to implement into the PDP-11 system. Two 40-pin connectors are conveniently mounted near the edge of the board. These connectors permit the external device to be easily connected using BC07D, BC08R or BC04Z flat cables available from DIGITAL. These cables have the mating connectors premounted and are supplied in any specified length. See elsewhere in catalog.

Two-word Input — DR11-L

$346

Similar in function to DR11-C except DR11-L transfers two independent 16-bit parallel data words from a user's peripheral device into the PDP-11 computer system.

Two-word Output — DR11-M

$346

Similar to DR11-C except DR11-M transfers two independent 16-bit parallel data words from the PDP-11 computer system to a user's peripheral device.

SERIAL I/O INTERFACES

Asynchronous Serial Line Units

DL11-WA, DL11-WB, DL11-WC

$701

DL11-WA, -WB and -WC serial line units are character-buffered interfaces that perform two basic operations. First, receiving and transmitting asynchronous serial data. Second, providing a line frequency clock that is used to measure time. DL11-WA is desiged to interface with a 20 mA current loop, -WB is compatible with EIA RS232C, -WC is EIA compatible and has modem control.

As a receiver of serial data, the interface converts an asynchronous serial character from an external device into the parallel character required for transfer to the UNIBUS. This parallel character can then be gated through the bus to memory, a processor register, or some other device.

As a transmitter, a parallel character from the bus is converted to a serial character for transmission to an external device. Because the two data transfer units (receiver and transmitter) are independent, they are capable of simultaneous two-way communication. The receiver and transmitter each operates through two related registers; a control and status register for command and monitoring functions, and a data buffer register for storing data prior to transfer to the bus or external device. The line frequency clock uses a signal derived from an ac input voltage by the power supply to generate timed interrupts. The clock portion utilizes a register for command and monitoring functions.

Switch selections on the interface provide the flexibility needed to handle a variety of terminals. The user can, for example, set up switches such that DL11-WA can interface to a teletype or, by resetting switches, to a high speed CRT terminal. The user has a choice of speeds, character size, stop-code length, parity and error checking.

The SLU/RTC option is packaged on a quad height integrated circuit module which can be inserted into either a small peripheral controller slot in a processor or one of the SPC slots in a DD11-A peripheral mounting panel. All users input and output signals are connected to the interface by Berg Connector D. Power of +5V at 2.0A and −15V at 150 mA (EIA level between +9V and +15V at 50 mA) is required. A 70-8360-1 20 mA current loop cable is provided with the DL11-WA whereas a BC05C-25 EIA interface cable is supplied with DL11-WB and -WC.

For Programming and Operating Characteristics refer to PDP11 Peripherals Handbook.

ANALOG INTERFACES — AR11

$1652

The AR11 is a compact analog real-time module for use with the PDP-11 family of computers. Included on the module are a 10-bit A/D converter, two 10-bit D/A converters, a crystal controlled clock, scope control, a 16-channel multiplexer, and a sample and hold amplifier. Operation and selection of functions is under software control.

The complete AR11 subsystem electronics are contained on one single hex module that can mount in either of the two center slots of a DD11-B, C, or D system unit, or within the CPU mainframe assembly. All external connections are made via a Berg connector (supplied with mating plug) which is mounted on an outside corner of the module.

No external analog supply voltages are required. A unique dc to dc converter without transformer uses the +5V logic power to generate the high-quality positive and negative voltages needed by the AR11.

digital DIRECT SALES CATALOG

PDP-11 WIRE WRAPPABLE MODULE BOARDS

SPC/PDP-11 COMPATIBLE

DIGITAL offers a family of Small Peripheral Controller (SPC) compatible wire wrappable modules. These modules are ideal for PDP-11 design prototyping, limited quantity production runs, or design instructional use.

The family of modules consists of six boards: two double height, two quad height, and two hex height. One card of each size is equipped with premounted Dual-In-Line (DIP) package low-profile sockets. The other one is without sockets. Each board will accept various combinations of DIP assemblies including the more common 14-, 16-, 24-, and 40-pin packages. Various other size DIP assemblies as well as discrete components are easily accommodated.

The printed circuit on each board connects the appropriate edge connector pins to the Vcc plane on Side 2 of the board (component side) and the ground plane (GND) on Side 1. The remaining edge connector pins terminate to a double row of wire wrap pins for user designated function. Each of the modules also includes a 40-pin male cable connector to allow an interface cable to be attached to the module logic. The pins of the cable connector are also terminated to a double row of wire wrap pins. The quad and hex height modules have a space where a second 40-pin cable connector (P/N H854 labeled J2, see p. 21, or suitable connector) can be inserted by the user. When this second cable connector is not required, additional IC packages can be installed. Each board contains insulated standoffs to maintain the required clearance between adjacent modules to prevent shorting of wire wrap pins.

The wire wrap pins and components are mounted on Side 2 of each module. The majority of the rows of predrilled holes accept IC packages with pin spacings of 0.3″. However, universal areas on the six modules accept IC packages with standard pin spacings of 0.3″, 0.4″, and 0.6″. See diagram of each board.

DIRECT SALES CATALOG

DIGITAL'S MODULAR SYSTEMS

DIGITAL Modules are single-height, double-height, or quad-height; standard length or extended length; and single-width or double-width. Each DIGITAL Module is a specific, fixed size; the size of each module is stated in the module description. DIGITAL single-height and double-height modules are standard length or extended length. DIGITAL quad-height modules are always extended length. Any DIGITAL Module can be single-width or double-width; most, however, are single-width.

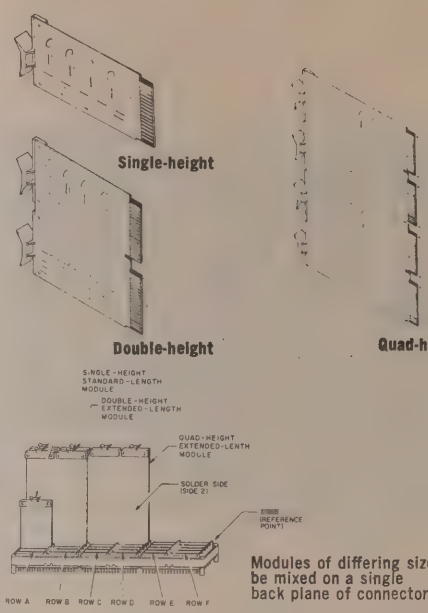
The height and length requirement is determined by the quantity and size of discrete components and integrated circuits located on side 1 of the module, and to some extent, by the amount of etched printed circuitry on sides 1 and 2. The width requirement is determined by the distance the largest component extends from its mounting surface on the module.

All DIGITAL Module connector blocks accommodate any height (standard or double) module. The length of the modules to be used in a logic system must, however, be considered when connector block mounting drawers, system unit mounting drawers, or cabinets are being selected; enough space must be provided to accommodate the longest module. DIGITAL's standard length modules are 5.40/5.60 in. long and extended length modules are 8.84/9.04 in. long from the bottom of the contact fingers to the top of the attached handle(s).

All DIGITAL Module connector blocks accommodate any width (single or double) module. The width of the module must be considered, however, when any connector block module slot is occupied by a double-width module; this is because no module can be inserted into the module slot on the immediate right on the same connector block unless that connector block provides sufficient space between module slots for the mounted components, i.e., an H808 Module Connector Block. Normal module spacing is on half-inch centers.

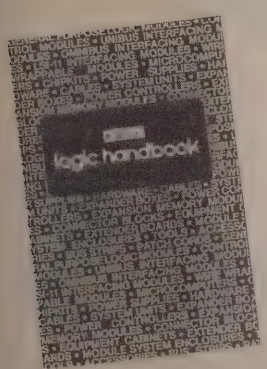
Some DIGITAL Module connector blocks accommodate only single-height modules and others accept either single-height or double-height modules. No single connector block can accommodate quad-height modules; quad-height modules must be mounted in mounting frames, system units, or module drawers comprising module connector blocks with slotted ends so that four module slots are arranged end to end (i.e., at least two H863 or H8030 Module Connector Blocks mounted end to end). Single-height modules are 2.417/2.452 in. high, Double-height modules are 5.167/5.202 in. high, and quad-height modules are 10.437/10.472 in. high.

See Hardware Section of this catalog for descriptions of the connector blocks and mounting frames/enclosures available from the Direct Sales Catalog.



Modules of differing sizes can be mixed on a single back plane of connector blocks.

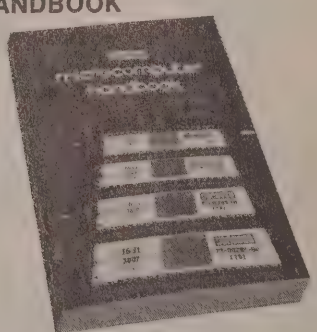
LOGIC HANDBOOK



The Logic Handbook, known as the computer industry's "Bible" on logic design, gives you the technical story on general purpose computer interfacing, various cable configurations, system boxes and enclosures, special purpose interfaces and a host of other compatible equipment.

For almost twenty years, the Logic Handbook has been regarded as the one reference book for customers for the world of interfacing and DEC products. Have your own resident DEC sales and technical consultant — the Logic Handbook!

MICROCOMPUTER HANDBOOK



The Microcomputer Handbook is our answer to the question, "Where can I find the answers to everything I've always wanted to know about the LSI-11, but didn't know where to look." Included are detailed chapters on the processor, options, installation, software, operating systems, peripheral devices, programming, maintenance and much more. The text covers the full range of LSI-11 systems from the LSI-11 board set to the PDP-11/03 microcomputer to the PDP-11V/03 disk based microcomputer system. Truly, everything you want and need to know of the LSI-11 microcomputer is found between the two covers of this handbook!

DIRECT SALES CATALOG APPLICATION NOTES AND PRODUCT BULLETINS

For the user who requires more complex and technical information on specific products or application ideas, the D.S.C. has a complete line of detailed product bulletins and application notes. These publications will tell you everything you should need to know about the particular product involved.

Dozens of different application notes and product bulletins are available for the asking.

DIRECT SALES CATALOG

The Direct Sales Catalog is:
YOUR HARDWARE STORE

This section describes DIGITAL's line of mounting hardware, cabinets, connectors, power supplies, wire wrapping accessories, and other accessory-type interface products available through the Direct Sales Catalog. These items are the unique and essential products that provide efficient and orderly system construction. This section is especially useful for logic and system designers faced with the problem of translating a paper design into working hardware. The products described will aid the logic designer immeasurably in choosing suitable hardware and accessories.

CONNECTORS AND MOUNTING HARDWARE

CONNECTOR BLOCKS

At the heart of DIGITAL's mounting systems are these Connector Blocks. Designed to make reliable connection with contact fingers on either one or both sides of pc modules, they can be classified as one-slot, two-slot or four-slot wide. The smallest block accepts one single-height module. The largest accepts eight single- or four double-height modules. Blocks can be mounted end-to-end for quad- or hex-height modules but blocks with slotted ends must be specified. Each slot has 36 contact positions though some blocks have contacts on only one side (for single-sided pc modules). Solder fork and wire wrap terminals are available. See table for details of each block.

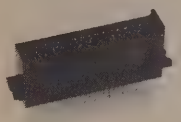

FIG. 1
Single height. Single slot. Wire wrap terminals. Shown is H807. H802 is physically similar.

FIG. 2
Double height. Two slots. Wire wrap terminals. Slotted ends. Shown is H8030.

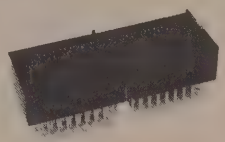

FIG. 3
Double height. Four slots. Wire wrap terminals. Shown is H808.

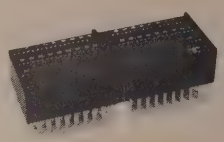

FIG. 4
Double height. Eight slots. Wire wrap or solder fork terminals. Shown is H800-W. H800-F and H803 are similar.

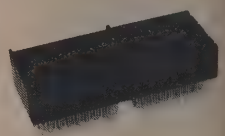

FIG. 5
Double height. Eight slots. Slotted ends. Shown is H863.

CATALOG NUMBERS VS MODEL NUMBERS

The Catalog Numbers published in this catalog relate only to purchases made through the Direct Sales Catalog. The **Bold Face** portion of each Catalog Number is the official DIGITAL Model Number. All invoices and packing slips will reference only the Model Number.

CONNECTORS AND MOUNTING HARDWARE

19-INCH RACK MOUNTING PANELS

These 19-inch mounting panels mount on racks drilled or punched to standard EIA spacings. Each mounting panel comprises module connector blocks held together in mounting frames. The mounting frames are equipped with endplates to protect the mounted modules that plug into the connector blocks. Various configurations are available as detailed in the table.

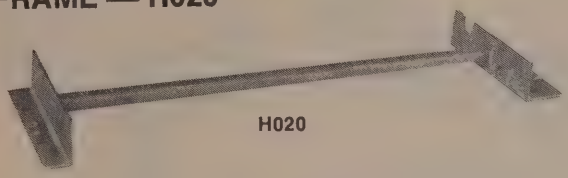
DIRECT SALES CATALOG

CONNECTORS AND MOUNTING HARDWARE

CONNECTOR BLOCK MOUNTING FRAME — H020



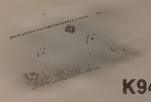
H020

Designed to accommodate a variety of module connector blocks, power supplies, and other components. Up to eight, H863, H800, H803 or H808 blocks can be mounted. Grounding lugs can be attached also. Fits 19″ racks.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**H020**	**$17**	**$16**	**$15**	1 lb.

MOUNTING BRACKET — K941 SUPPORT — K940

K941



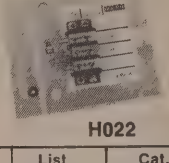
K940

Up to four module connector blocks (H800, H803, H8030, H863, H808) can be mounted to any convenient surface with the K941 Mounting Bracket. K940 is a support that attaches to an enclosure to facilitate mounting K941.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**K940**	**$11**	**$10**	**$10**	1 lb.
B-**K941**	**15**	**14**	**14**	.5 lb.

STANDOFF END-PLATES (H021, H022) (H024, H025)

These end-plates attach to the ends of the H020 connector block mounting frame to provide strength to the frame, to protect the modules, and to provide a terminal block for dc power connections. Each end-plate occupies 5.25-inch of vertical mounting space. The H021 and H022 comprise a right and a left pair for standard length modules. Conversely H024 and H025 are for extended length module applications. The terminal block is three-section for +5V dc, −15V dc, and ground. It accepts spade and quick-connect terminals. Filtering capacitors (68 μF) are installed on H022 and H025.



H022

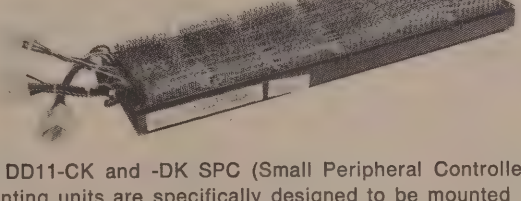
HEX-SIZE SPC MOUNTING UNITS



The DD11-CK and -DK SPC (Small Peripheral Controller) mounting units are specifically designed to be mounted in BA11-L and BA11-K system expansion boxes. These mounting units differ from the DD11-A and -B models in that the -CK and -DK models will accept hex-size SPC interface modules unique to certain computer systems. Both come prewired with power cable harnesses compatible with the BA11-L and -K boxes.

Before ordering a DD11-CK or -DK, the user should be thoroughly familiar with the requirements of both the system unit and the computer system involved. Consult with the particular processor handbook for further information, or call the Catalog Sales Desk.

HARDWARE AND ACCESSORIES

CONNECTORS AND MOUNTING HARDWARE

FOUR-SLOT MOUNTING SYSTEMS

Four-slot Mounting Systems are designed to mount in the various Module System Enclosures available from DIGITAL. These systems comprise a mounting frame and up to three four-slot Module Connector Blocks mounted end-to-end. A fully complemented four-slot system unit provides mounting facilities for 24 single-height, 12 double-height or four quad-height plus eight single- or four double-height modules. See table for details of available units. An H014 Mounting Panel, see below, can be ordered to mount the four-slot units in a 19-inch rack.

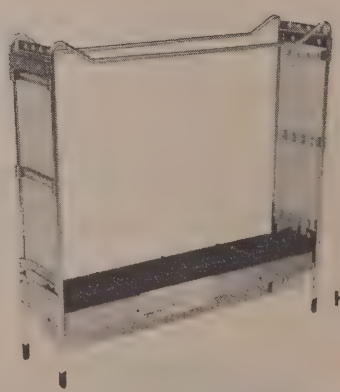
*Plus either an additional 8 singles or 4 doubles.
†Each System Unit is 16½″ long by 2¼′ wide by 1.59″ high (not counting terminals).

FOUR-BY-FOUR SLOT SYSTEM UNIT — H9271

The H9271 is a general purpose, four-wide by quad-height system unit mounted within an integral card cage assembly. The H9271 can be used as a general purpose system unit for virtually any application requiring a compact, easily mountable logic rack. The system unit is manufactured and machined in such a way as to facilitate mounting in any plane or axes.

The H9271 consists of two H863 slotted connector blocks placed end to end for the mounting of four quad-height, eight double-height, or sixteen single-height modules or any combination of the above totaling sixteen single slots. The blocks are mounted within a rectangular steel frame allowing easy access to the pin side of the blocks for wire wrapping, and the card cage surrounds the module insertion side of the logic rack.



H9271

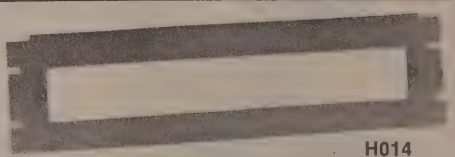
B-H9271	$94	$89	$86	5 lbs.

MOUNTING PANEL — H014

Shown is the H014 panel on to which a four-slot system unit can be mounted. H014 is a flat panel with raised edges and a rectangular central hole to allow the System Unit terminals to be accessed. Mounts in a 19″ rack and occupies 5¼″ vertically. An H726-B power supply (see p. 98) may be used in a rack mountable configuration by using the H014.



H014

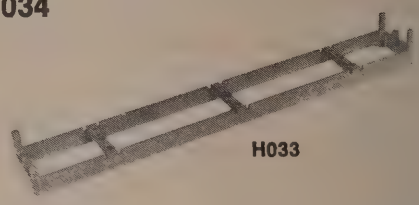
CONNECTORS AND MOUNTING HARDWARE

SYSTEM UNIT MOUNTING FRAMES — H033, H034

These are blank mounting frame predrilled to be equipped with Module Connector Blocks (H800-F, H800-W, H803, H808 or H863). Unit H033 can hold up to three blocks. H034 can hold six 4-slot blocks and three 1-slot blocks (H8030). The H034 is designed specifically to fit in a PDP-11 Processor Cabinet or a BA-11 Expansion Box. It provides module mounting space equivalent to two system units (e.g. two BB-11's). Shown is the H033. This unit can be mounted on a H014 Mounting Panel for installation in 19″ rack systems — or it can be mounted in other enclosures. H033 is 2¼″ wide by 16½″ long by 1.59″ high. H034 is 4.77″ wide by 16.52″ long by ¾″ high.



H033

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**H033**	**$11**	**$10**	**$10**	2 lbs.
B-**H034**	**17**	**16**	**15**	3 lbs.

NINE-SLOT SYSTEM UNITS — H934-CB, BB11-B

A nine-slot system unit comprises up to six four-slot wide Module Connector Blocks plus three one-slot wide blocks such as H8030. The blocks are mounted in groups of three: one four-slot wide, one one-slot wide, then one four-slot wide. A fully complemented system unit can hold 54 single-height or 27 double-height, or 9 quad-height plus 16 single-height (or 8 double-height) modules. H934-CB is an unwired unit for general use comprising six H863 eight-slot blocks and three two-slot blocks H8030. Each block has 36 contacts per slot and wire wrap pins. The BB11-B unit is dedicated to general PDP-11 interfacing and is prewired for UNIBUS power only. Both units have dimensions of 4.77″ wide by 16.52″ long by .75″ high (not counting terminals).

B-**BB11-B**	**285**	**271**	**259**	8 lbs.

EDGE CONNECTOR — H851

H851 is used to interconnect 36 top (Handle) contact fingers to 36 top (Handle) contact fingers on an adjacent module board. Interconnection between slots is by an in-place PC board. H851 connectors are particularly useful for the interconnection of PDP-8 Omnibus modules equipped with edge type connector fingers.

CONNECTORS AND MOUNTING HARDWARE

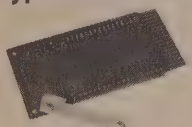
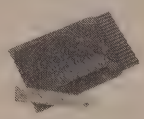
CABLE CONNECTORS

Each of these connectors comprise a unique printed wiring pattern on a PC board and means for connecting a cable to the PC board. The PC board is in fact the male half of a connector. It plugs into the slot of a standard Connector Block. Different cable types including Flat Ribbon, Flat Mylar, Flat Coaxial, Round Twisted Wire Pair, Round Coaxial and Multiconductor Round can be accommodated by specific connectors. Cables are connected by split-lug solder terminals, solderless clamp-type connector housings, or by PC soldering techniques to pads on the boards. Although certain of these connectors have been developed for specific applications, they are applicable to many other systems. Details of each connector are covered in the table. Typical connector configurations are shown pictorially to highlight the features that are available.

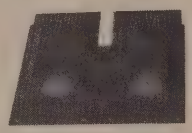
Typical Connector Configurations



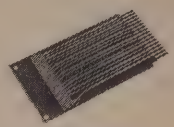
Standard length. Single height. Current limiting resistors. Split-lug terminals. **M908**



Short length. Single height. Split-lug cabling terminals. Side entry cable. **M927**



Standard length. Double height. Top entry cabling. **M912**



Standard length. Solderless connector for flat shielded cable. **M953**

Extended length. Single height. E/W handle. Side cable entry. PC pads for cable connection. **M972**

Flat Ribbon 20-Conductor

NOTES FOR CONNECTORS

*10 ohm ¼ series resistors.

§3000 ohm ¼W ±5% series resistors.

¶Each signal line has a D664 diode in series.

**M933 is a power distribution board that can contain 20 resistor divider networks plus ground and voltage-in terminals. Space is allowed for 2 dc filter capacitors. All components are supplied by customer.

††35/35 means that there are two mutually exclusive circuits each of which has 35 common paths.

‡‡Including drain wires.

SL — Solder lug (split lug) mounted on board.

SId — Cable conductors soldered directly to PC board.

Con — Solderless terminals in a connector housing.

TWP — Twisted wire pair. e.g. 36 TWP is 18 individually twisted pairs.

CATALOG NUMBERS VS MODEL NUMBERS

The Catalog Numbers published in this catalog relate only to purchases made through the Direct Sales Catalog. The **Bold Face** portion of each Catalog Number is the official DIGITAL Model Number. All invoices and packing slips will reference only the Model Number.

digital DIRECT SALES CATALOG

CONNECTORS AND MOUNTING HARDWARE

RECTANGULAR CONNECTORS

Three sets of connectors are offered each of which has a male and female half. The Board-to-Cable connectors, Fig. 1 and Fig. 2 have one half affixed to a PC board while the other terminates a flat cable. The Panel-to-Cable Connectors have one half, generally, mounted on a panel; the other half terminates a round cable. See table for details.

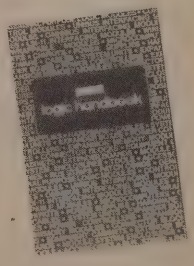
LOGIC HANDBOOK



The Logic Handbook, known as the computor industry's "bible" on logic design, gives you the technical story on general purpose computer interfacing, various cable configurations, system boxes and enclosures, special purpose interfaces and a host of other compatible equipment.

For almost twenty years, the Logic Handbook has been regarded as the one reference book for customers for the world of interfacing and DEC products. Have your own resident DEC sales and technical consultant — the Logic Handbook!

GRIP CLIPS — H820, H821 — Make Your Own Patch Cords

Designed to slip easily on to wire wrap pins, these grip-clip connectors are sold in 1,000 lot quantities. H820 fits wire wrap pins that accept 24 AWG; H821 for 30 AWG-designed pins. Tools H825 and H826 can be used to crimp these connectors to 24 or 30 AWG stranded wire. See tools elsewhere in this hardware section.

HARDWARE AND ACCESSORIES

CONNECTORS AND MOUNTING HARDWARE

PATCH CORDS — FOR WIRE WRAP TERMINALS — 913, 915

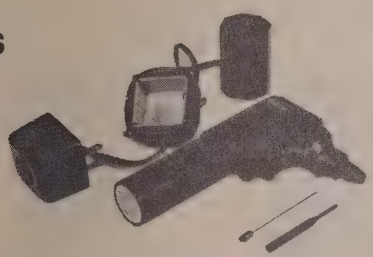
Equipped with H820 or H821 grip-clip connectors to provide slip-on connections to wire wrap pins, these patch cords are available in assorted lengths and insulation colors. 913 fits wire wrap pins sized for 24 AWG; 915 for 30 AWG-designed pins. IPVC insulated stranded wire (24 AWG for 913, 26 AWG for 915) forms the patch cord.

Ordering Information

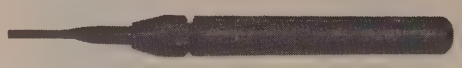
Add appropriate dash number for color/length required according to the following: 2-in Brown (-2); 3-in Brown/White (-3); 4-in Red (-4); 6-in Red/White (-6); 8-in Orange (-8); 12-in Orange/White (-12); 16-in Yellow (-16); 24-in Yellow/White (-24); 32-in Green (-32); 48-in Green/White (-48); 64-in Blue (-64); order dash number (-AF) for a 100 assortment as follows: 30(-3), 25(-6), 25(-8), 10(-24), 5(-32), 5(-64).

Cat. No.	Qty. per Pkg.	List	Cat.	Cash	Shipping Weight
B-913(-XX)	100	$28	$27	$25	1 lb.
B-915(-XX)	100	36	34	33	1 lb.

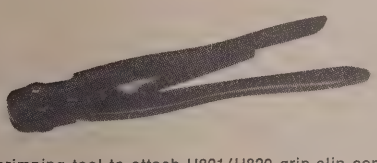
TOOLS



Battery operated wire wrap guns have rechargeable nickel-cadmium batteries. Supplied w/bit and sleeve set, and recharger.



Hand wrap tool is essential for service and repair work. Use for limited production applications, too.



Hand crimping tool to attach H821/H820 grip-clip connectors to 24/30 AWG stranded wire.

Hand unwrapping tool quickly removes wrapped wires.

WIRE WRAPPABLE BOARDS

Wire wrappable modules provide a convenient, low-cost method of producing prototype or limited runs of production modules with special circuitry that utilizes, mainly, dual-in-line package (DIP) integrated circuits (IC's). They are completely compatible with the standard module mounting blocks summarized elsewhere in this publication. There are two styles of board offered in this Section of the catalog:

- *Series W940 and W950 — General purpose.*
- *Series W9300 — High density, socket pins.*

Series W900 can be obtained with or without premounted sockets. Series W9300 has special "socket pins" that allow IC's (or other component leads) to be plugged in without soldering.

See LSI-11 Section and PDP-11 Modules for other Wire Wrappable Boards.

GENERAL PURPOSE — SERIES W940 AND W950

These glass epoxy, wire wrappable modules have +5V dc power and ground bused (printed circuit etch tracks) to wire wrap pins at each IC location to facilitate connection of Vcc and ground to the appropriate IC wire wrap pin. The wire wrap pins each accommodate two 30 AWG wire wraps. All of these modules have etched and gold-plated contact fingers and all have handles attached.

WIRE WRAPPABLE & EXTENDER

HIGH DENSITY, SERIES W9300

The W9301 and W9302 are wire wrappable modules suitable for user designed logic interface applications. The module accepts a variety of dual-in-line (DIP) integrated circuits (IC's) or discrete components which can be mounted to the module without the use of solder. The component or IC leads insert into specially designed socket terminals which have a wire wrap pin on the opposite end. The electrical interconnection of the wire wrap pins can be performed manually or by using automated wire wrapping techniques.

The W9301 board has four rows of 36 gold-plated contacts (18 contacts on each side of each row). Each contact is connected to a wire wrap pin by the board etch. A ground plane is etched on side 1 of the module and power (Vcc) plane is etched on side 2. Contact pin A2 of each of the four rows directly connects to the power plane, and contact pins C2 and T1 directly connect to the ground plane. The module is quad-height, extended length. A total of 68 decoupling capacitors are provided premounted between Vcc and GND at each main IC location. The module occupies 2 slots of a standard DIGITAL system unit. A 40-pin connector is mounted at the edge of the module to facilitate the attachment of a device cable assembly.

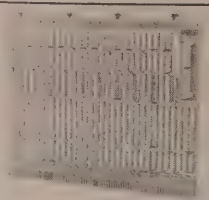
The W9302 board has six rows of 36 gold-plated contacts (18 contacts on each side of each row). Each contact is connected to a wire wrap pin by the board etch. A ground plane is etched on side 1 of the module and power (Vcc) plane is etched on side 2. Contact pin A2 of each of the six rows directly connects to the power plane, and contact pins C2 and T1 directly connect to the ground plane. The module is hex height, extended length. A total of 97 decoupling capacitors are provided premounted between Vcc and GND at each main IC location. The module occupies two slots in a standard DIGITAL system unit. Two 40-pin connectors are mounted at the edge of the module to facilitate the attachment of device cable assemblies.

Wire Wrap Terminals

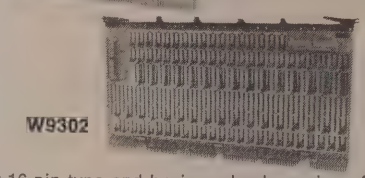
All wire wrap terminals on side 2 of the modules are located on a grid of 0.1″ spacing to facilitate automatic point-to-point wire wrapping equipment. The connections to the pins are made using #30 gauge solid conductor insulated wire.

Total IC Complement

The W9301 module has three pin configuration areas assigned to 16-pin, 24- and 40-pin IC's. The 16-pin area consists of three rows of socket terminals and will accept a total of 47 IC's of the 8-, 14-, or 16-pin type and having a lead spacing of 0.3″. The 24-pin area will accept a total of 10 IC's with up to 24 pins per IC, and having a lead spacing of 0.3, 0.4, or 0.6″. The 40-pin area will accept a total of 11 IC's with up to 40 leads per IC having a lead spacing of 0.6″ or a total of 22 IC's with up to 16 leads per IC and having a lead spacing of 0.3″. Thus up to 79 IC equivalents (14- or 16-pin DIP) can be mounted on the module. Areas are provided on the board for mounting DIP's with a center spacing of 0.3, 0.4, or 0.6″. Table I lists the acceptable IC types and pin spacing.



W9301



W9302

TABLE I IC TYPES

IC, Total Pins	Center Spacing (Inch.)
8	0.3
14	0.3
16	0.3
18	0.3
20	0.3
22	0.4
24	0.6
28	0.6
40	0.6

The W9302 module has three pin configuration areas assigned to 16-, 24-, and 40-pin IC's. The 16-pin area consists of three rows of socket terminals and will accept a total of 65 IC's of the 8-, 14-, or 16-pin type and having lead spacing of 0.3″. The 24-pin area will accept a total of 15 IC's with up to 24-pins per IC, and having a lead spacing of 0.3, 0.4, or 0.6″. The 40-pin area will accept a total of 17 IC's with up to 40 leads per IC and having a lead spacing of 0.6″ or a total of 34 IC's with up to 16 leads per IC and having a lead spacing of 0.3″. Thus up to 114 IC equivalents (14- or 16-pin DIP's) can be mounted on the module. Areas are provided on the board for mounting DIP's with a center spacing of 0.3, 0.4 or 0.6″. Table I lists acceptable IC types and pin spacing.

Cat. No.	Size	DIP Capacity 8-, 14- or 16-Pin	DIP Capacity 24-Pin	DIP Capacity 40-Pin	Prices	Shipping Weight

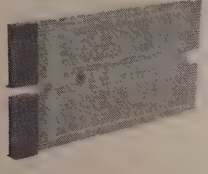
B-W9302	EHD	65	15	17†		4 lbs.

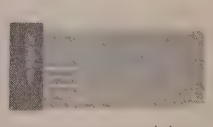
*Or 22 additional 16-Pin DIP's with 0.3″ lead spacing.
†Or 34 additional 16-Pin DIP's with 0.3″ lead spacing.

MODULE EXTENDER BOARDS



W900

Used in systems comprising extended length modules to extend a double-height, 72-pin module with +5V dc power at contact fingers AA2 and BA2 and with ground at contact fingers AC2, BC2, AT1, and BT1, i.e., most double-height M-Series modules. This is a multilayer module: layer 2 is the ground plane and layer 3 is the +5V dc power plane.

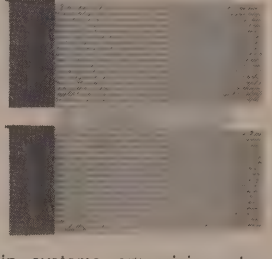


W980

Used in systems comprising standard length modules to extend a single-height, 18-pin (one side only) module, i.e., most A-, K-, and W-Series modules. None of the contact fingers are interconnected.

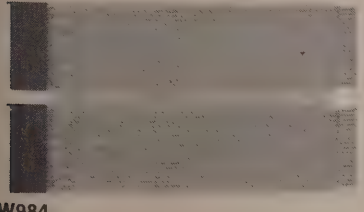
W982

Used in systems comprising standard length modules to extend a single-height, 36-pin module, i.e., single-height M-Series modules. None of the contact fingers are interconnected.



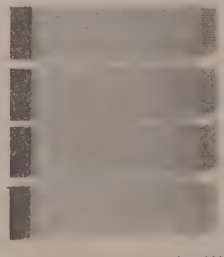
W983

Used in systems comprising standard length modules to extend a double-height, 72-pin module, i.e., double-height M-Series modules. None of the contact fingers are interconnected.



W984

The same as W983 except the W984 is an extended length module extender board and should be used to extend a system module located beside one, or between two, extended length modules.



W987

The same as W984 except the W987 is a quad-height module extender board and should be used to extend quad-height (144-pin) modules.

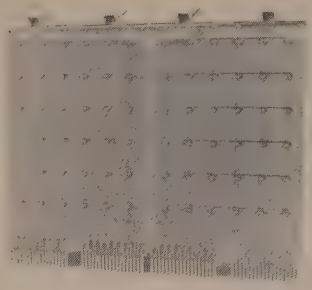
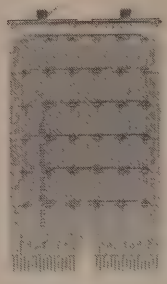
EXTENDER, COLLAGE AND BLANK BOARDS

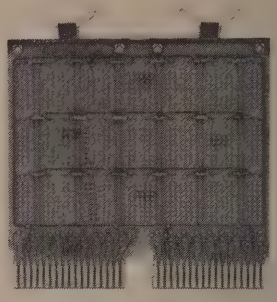
COLLAGE MODULE BOARDS



W968



W969



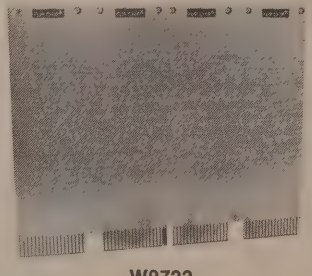
W979

Collage module boards provide a convenient, low-cost method of producing prototype or limited runs of production modules with special circuitry that uses 14- or 16-pin dual-in-line package (DIP) integrated circuits (IC's) with or without wire wrap sockets and/or solder sockets. These different configurations are described in the table that follows. Collage module boards are completely compatible with the standard module mounting blocks. These glass epoxy modules have +5V dc power and ground bused (printed circuit etch tracks) to plated-through holes at each IC location to facilitate connection of Vcc and ground to the appropriate IC pin.

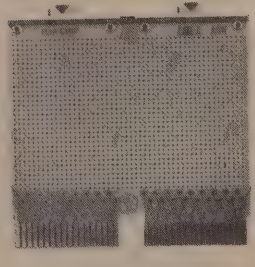
Cat. No.	Description	List	Cat.	Cash	Shipping Weight
B-W968	Accommodates up to seventy-two 14- or 16-pin DIP IC's with or without wire wrap sockets and/or solder sockets.	$74	$70	$67	3 lbs.
B-W969	Same as W968 except accommodates 36 IC's.	37	35	34	1 lb.
B-W979	Same as W968 except accommodates 18 IC's.	29	28	26	½ lb.

BLANK MODULE BOARDS

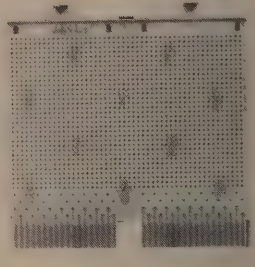
W930



W9722



W975



W999

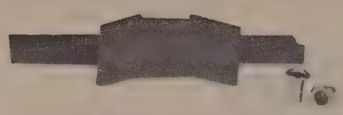
Blank module boards provide a convenient method of breadboarding (mounting) experimental or prototype circuits, and they provide a low-cost method of producing limited runs of production modules with special circuitry. They are completely compatible with the standard module mounting blocks. These glass epoxy, blank module boards have etched and gold-plated contact fingers and all have handles supplied.

Cat. No.	Description	List	Cat.	Cash	Shipping Weight
B-W930	Bare board wih 36 feed-through eyelets. PC etching from the eyelets to the contact fingers.	$11	$10	$10	¼ lb.
B-W970	Bare board with 36 plated-through holes in the printed circuit etching to the contact fingers.	11	10	10	¼ lb.
B-W971	Same as W970 except double-height and has 72 plated-through holes and two handles.	17	16	15	¼ lb.
B-W972	Copper-clad on both sides.	15	14	14	¼ lb.
B-W9720	Same as W972 except extended length.	9	9	8	½ lb.
B-W9721	Same as W9720 except double-height and has two handles.	17	16	15	½ lb.
B-W9722	Same as W9720 except quad-height and has four handles.	31	29	28	1 lb.
B-W973	Same as W972 except double-height.	28	27	25	½ lb.
B-W974	Perforated board with 36 plated-through holes in the printed circuit etching to the contact fingers.	10	10	9	¼ lb.
B-W975	Same as W974 except double-height and has 72 plated-through holes and two handles.	21	20	19	¼ lb.
B-W990	Bare board with 18 split-lug terminals. Printed circuit etching from the split-lugs to the contact fingers. This board has contact fingers on one side only.	8	8	7	¼ lb.
B-W991	Same as W990 except double-height and has 36 split-lug terminals and two handles.	15	14	14	½ lb.
B-W992	Same as W972 except copper-clad on one side only and has contact fingers on one side only.	7	7	6	¼ lb.
B-W993	Same as W973 except copper-clad on one side only and has contact fingers on one side only.	12	11	11	½ lb.
B-W998	Same as W974 except has 18 plated-through holes and has contact fingers on one side only.	9	9	8	¼ lb.
B-W999	Same as W975 except has 36 plated-through holes and has contact fingers on one side only.	14	13	13	¼ lb.

MISCELLANEOUS

MODULE HANDLE — 937

The 937 (90-08337-08) is a package containing 25 blank, gray module handles and the eyelets to attach them to modules. These blank handles are generally user-attached to prototype or limited-production run modules that utilize blank copper-clad or wire wrappable modules. The handles are compatible with the handles of all DIGITAL's standard A-, K-, M-, and W-Series modules. They have two 0.128″ diameter mounting holes spaced 2.00″ center-to-center.

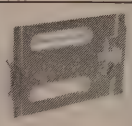


Cat. No.	Description	List	Cat.	Cash	Shipping Weight (per pkg.)
B-**937**	Package of 25 Blank Module Handles	$8	$8	$7	¼ lb.

MODULE HANDLE EXTENDER — H850

The H850 Module Handle Extender mounts over the handle of a single-height, single-length module and physically extends the length to make a single-length module congruous with extended length modules.

The H850 is manufactured from durable, U.L. Standard No. 94 recognized material and is sized to fit over DIGITAL's standard module handle. It is sold in lots of ten.

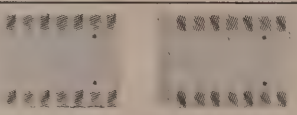


Cat. No.	Description	List	Cat.	Cash	Shipping Weight (per pkg.)
B-**H850**	Package of 10 Module Handle Extenders	$15	$14	$14	¼ lb.

MODULE HOLDER CLIPS — H852, M853 •

The H852 and H853 Module Holder Clips are used to maintain rigidity of the modules in a system. Each module holder clip fits over the top (handle end) of modules of the same length in adjacent slots of a system unit. The H852, a ribbed type, fits between handles of modules in the same connector block; the H853, a nonribbed type, fits between handles of modules in adjacent (end-to-end) connector blocks.

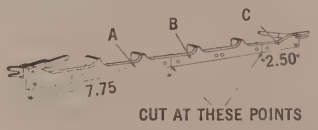
The H852 and H853 are manufactured from durable, plastic material that is nonconductive. Sold in lots of 25 each.



Cat. No.	Description	List	Cat.	Cash	Shipping Weight (per 25 lot)
B-**H852**	Package of 25 Module Holder Clips (ribbed type)	$9	$9	$8	¼ lb.
B-**H853**	Package of 25 Module Holder Clips (nonribbed type)	9	9	8	¼ lb.

HOLD-DOWN BRACKET — 12-10711-02

The 12-10711-02 module hold-down bracket serves as a mechanical combination handle and hold-down bracket for Hex-size modules when used with appropriate card guides such as an H0341. This bracket can also be used as a hold-down bracket for LSI-11 compatible modules (quad-size) but must be modified as shown in the accompanying drawing.



CUT AT THESE POINTS

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**12-10711-02**	$4	$4	$3	1 lb.

IC SOCKETS — 954, 961, 962

These integrated circuit (IC) sockets provide low-cost, reliable production packaging of 14- or 16-, 24-, and 40-pin dual-in-line package (DIP) integrated circuits (ICs). These low-profile IC sockets are especially useful for limited-production runs of special, user-designed circuitry using blank or wire wrappable module boards (described in this section), which are available without factory-installed IC sockets.

The 954 accepts 14- or 16-pin ICs; 10 sockets/package.

The 961 accepts 24-pin ICs; 5 sockets/package.

The 962 accepts 40-pin ICs; 5 sockets/package.

Cat. No.	Description	List	Cat.	Cash	Shipping Weight (per pkg.)
B-**954**	Package of 10 Sockets 14- or 16-pin IC's	$8	$8	$7	¼ lb.
B-**961**	Package of 5 Sockets for 24-pin IC's	8	8	7	¼ lb.
B-**962**	Package of 5 Sockets for 40-pin IC's	25	24	23	¼ lb.

DAISY CHAIN — 917-2.5

The 917 Daisy Chain is a continuous length of stranded insulated wire on a reel with 250 gold-plated and insulated terminals crimped at 2.5″ intervals. A prototype system is easily and quickly hand patched when the 917 Daisy Chain is used.

The terminals are designed to fit on module connector blocks that have wire wrap pins sized for wrapping with 30 AWG wire (0.025/0.026″ square) e.g., module connector blocks H803, H8030, H807, and H863.

The 917-2.5 Daisy Chain has 250 terminals at 2.5″ intervals.

Cat. No.	List	Cat.	Cash	Shipping Weight

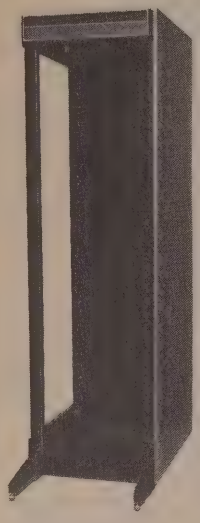
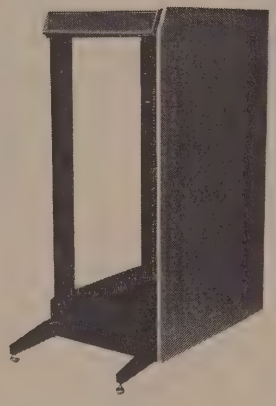
CABINETS AND ENCLOSURES

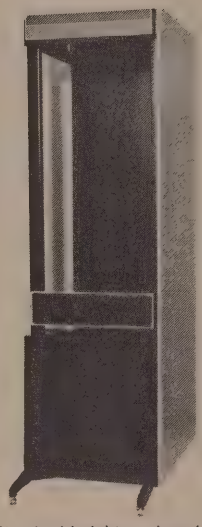
CABINETS — STANDARD AND SHORT



Standard height cabinet has 63″ of vertical mounting space



Short height cabinet has 42″ of vertical mounting space



Standard height equipped with short door and 5¼″ Bezel Cover Panel

Rear view of standard cabinet showing mounting panel door frame and full door

This cabinet style has two frames: standard size and short size; plus a complete line of cabinet accessories and hardware. Both sizes accept panels or equipment designed to mount in standard 19″ electronics cabinets or racks. The cabinet frames are rigidly constructed of 12 and 13 gauge steel, either riveted or welded together.

Basic color of the cabinet is black. Gray is used for end panels and the bezel of the cover panels.

These cabinet frames offer complete flexibility and expandability to present and future DIGITAL systems for end users, and original equipment manufacturers. The enclosure area in these cabinets is adaptable to customer-designed hardware, logic module racks, power supplies, computer systems and peripherals.

All cabinets are configured around the basic H950-AA or H957-AA Cabinet Frame. These cabinet frames are drilled with 0.25″ diameter holes at standard EIA spacings to accommodate equipment, panels, or devices which are designed to mount in standard 19″ electronics cabinets or racks. Some cabinets contain a Power Controller for distribution and control of the main power to the equipment installed. The five basic configurations shown later include a rear mounting panel door frame, which is also drilled with 0.25″ diameter holes at standard EIA spacings; this mounting panel door frame allows the equipment and devices mounted on it to be swung out for maintenance or adjustment. Optional accessories as specified by the customer can be added to any of the basic configurations. The parts and accessories included with each of the basic cabinet configurations are listed on page 89. The optional accessories that are available for use with these cabinets are listed opposite. All cabinets are completely assembled before shipment.

The cabinets can be placed individually or attached to form a multi bay configuration. The accessories and hardware available include front and rear doors, panel mounting door frames and door skins, end panels, bezel and logo panels, blower fans, and power controllers.

Standard Size Cabinets

Four basic cabinet configurations (H960-BC, H960-CA, H961-A, H961-AA) are available in the standard size cabinet series. The H961-A, -AA are intended primarily for add-on configurations. The standard size cabinet is 71.5″ high and provides 63.0″ of vertical mounting space at the front; an additional 63.0″ of mounting space is available at the rear of the cabinet. These cabinets are configured to meet the requirements of most customer applications.

Short Size Cabinet

The short size cabinet (H967-BA) is 50.0″ tall and provides 42.0″ of vertical mounting space at the front; an additional 42.0″ of mounting space is available at the rear of the cabinet.

How to Order A Basic Cabinet Assembly

Determine if one of the basic cabinet assembly configurations will fulfill your requirements by referring to page 89. and comparing the items that comprise each configuration.

If one of these basic configurations will satisfy your requirements, you can order the completely assembled cabinet by specifying that cabinet assembly number; e.g. H960-BC. In addition to the accessories included in the five configurations, optional accessories are available, e.g. short doors, a cabinet table, and drawer mounting slides.

If one of the basic configurations will not fulfill your requirements, you can "build up" and order a cabinet that will suit your specific requirements by ordering an H950-AA standard size frame or an H957-AA short frame and the accessories (by specific part numbers) that you require. The frame and the accessories that you select will be shipped completely assembled.

CABINETS AND ENCLOSURES

CABINETS: GENERAL PURPOSE, LOW PROFILE

H984 SERIES

The H984-BA (115V ac) and the H984-BB (230V ac) are low profile cabinets equipped with a walnut-grained, plastic laminate top surface, and four ball-type casters mounted on a supporting frame. The cabinets are a beige steel enclosure trimmed in flat black.

Each H984 provides mounting space for standard 19″ panels or racks at both the front and rear of the unit. Two vertical angles at the front and rear opening of the enclosure contain pre-drilled holes at EIA spacing. The angles can be laterally positioned within the cabinet to adjust for mounting units with varying depths. Both sides of the steel enclosure contain ventilation ports.

A 115V ac or 230V ac power control panel is supplied with the cabinet.

OPTIONAL EQUIPMENT

Fan Panel Assembly

A fan panel assembly with two enclosed rotary fans is available as an option and provides additional cooling for the electrical components in the cabinet. The assembly is pre-wired with a cord and male connector which can be inserted into one of the outlets on the power connector panel. The fan assembly is available for 115V ac or 230V ac. The panel is supplied with hardware for mounting.

Black Plastic Front Cover

A flat black, plastic louvered cover panel 1.75″ in height can be used to complete the covering at the front of the H984. The panel slots allow increased air flow through cabinet.

Blank Connector Panel

The blank connector panel is designed to completely enclose the rear opening of the H984 when the blower fan assembly option is included. This provides a surface for mounting interface cable connectors or cable openings. The panel is supplied with hardware for mounting.

Blank Metal Panel

A light gray blank metal cover panel, 3.5″ in height can be ordered to complete the covering at the front of the cabinet. The color is the same as PDP-11/03 front panel and H984 cabinet.

GENERAL PURPOSE SYSTEMS DESK — H9800-A

REDUCED IN PRICE

The H9800-A is a low-profile system desk equipped with a walnut grained plastic laminate top and color coordinated to fit into the modern office decor. The unit is equipped with six ball casters as standard equipment for easy positioning on carpeted surfaces. Included also is a 115V ac power distribution panel.

The H9800-A is constructed of quality materials including a top constructed of 55 lb. particle board with a dark-walnut plastic laminate. The "module" itself is constructed of 11 and 18 gauge steel with a maximum loading capacity of 400 lbs.

The H9800-A consists of a left-mounted rack enclosure offering 21″ of usable height and 29″ of usable depth in a standard 19″ EIA mount format. The right side offers knee space, a modesty panel, and a convenient work surface ideal for using terminals or typewriters.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-H9800-A	$650	$618	$592	100 lbs.

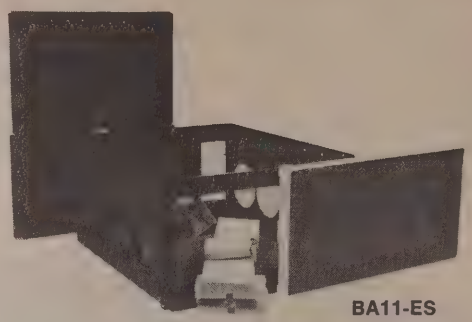
CABINETS AND ENCLOSURES

EXPANSION MOUNTING BOX — BA11-ES

The BA11-ES Expansion Mounting Box is a steel enclosure that is designed to house up to six four-slot or three nine-slot system units and an H720-E Power Supply. The BA11-ES enclosure consists of a chassis with brackets for mounting the system units and power supply; four side-mounted fans for forced air cooling; a removable top cover; two 12-09703 Tilting Chassis Slides; and an H950-QA Cover Panel. Included with the mounting box is an 8.5-ft. external I/O UNIBUS flat cable (BC11A-8F) used with PDP-11 Systems. An internal power cable is contained within the box; the power cable distributes dc power and power signals from the power supply to each of the BB11 System Units installed. An access hole at the rear of the box provides clearance for the receptacles and controls on the H720-E Power Supply. The BA11-ES is 16.75W by 23.25D by 10.50″H, excluding the cover panel and slides.

The BA11-ES can be installed in any electronics cabinet or rack equipped with 19″ mounting rails (front and rear) drilled at standard EIA spacings. The BA11-ES attaches



BA11-ES

to the cabinet frame by the two tilt slides mounted on each side of the unit. The tilt slides enable the unit to be pulled from the cabinet and tilted to facilitate servicing the system units or power supply.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**BA11-ES**	**$1050**	**$998**	**$956**	55 lbs.

EXPANSION MOUNTING CHASSIS — BA11-KE

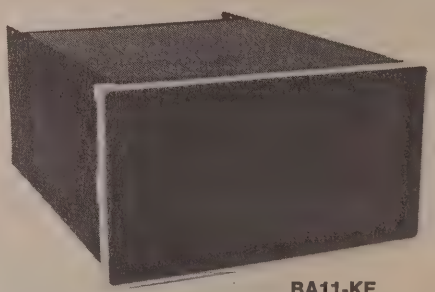
Description

BA11-KE is a general purpose PDP-11 expansion mounting chassis (10½H by 17W by 25″D) and mounts in standard cabinets. It includes the H765 power system for 115V operation and it supplies multiple voltages which deliver 660 watts of dc power. The expansion mounting chassis also includes mounting hardware, UNIBUS cable and a pop panel. BA11-KE is Underwriter Laboratories (UL) listed.

It accommodates any mix of modules including both quad and hex modules and has mounting space for up to 22 hex size modules. For example 2 nine by six slot system unit and 1 four by six slot system unit. A tilting chassis slide allows three positions: horizontal, 45° and 90°. Multiple dc voltages are available within BA11-KE as follows:

Multiple Voltages

(2) H744 Regulators	+ 5V @ 25A (each)
(1) H745 Regulator	−15V @ 10A
(1) 54-11-086 Regulator	+20V @ 8A
	− 5V @ 1.1A*
(1) 54-11086 Regulator	+15V @ 4A



BA11-KE

*Maximum −5V current is dependent upon +20V current. It is equal to 1A plus the current of the +20V supply, up to a total of 8A.

Input power required is 90-132V ac (47-63 Hz) single phase at 12A.

Cat. No.	List	Cat.	Cash	Shipping Weight
B-**BA11-KE**	**$2420**	**$2299**	**$2202**	100 lbs. unloaded

CHASSIS SLIDES

Three types of chassis slide are offered. Shown is a tilting version of 12-09703. A chassis mounted on this slide can be extended out of a cabinet 22.28″ and tilted 90° either up or down. The 12-09154 extends the chassis 22″ but is not tiltable. The 12-10945 extends the chassis 19″. It features a two-part construction whereby part of the left member can be removed to allow the left side cover plate of the H909-A or H909-BA drawer to be removed to access the enclosed modules. All slides mount in cabinets with front and rear rails drilled or punched to standard EIA spacings.

Cat. No.	List	Cat.	Cash	Shipping Weight

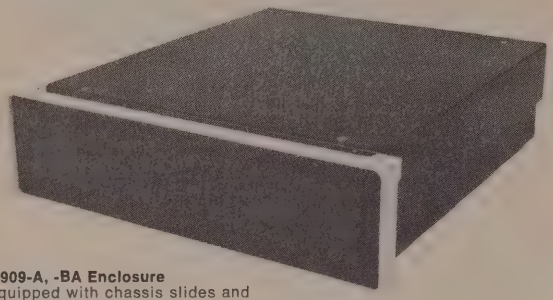
12-09703

MODULE ENCLOSURES — H909 SERIES

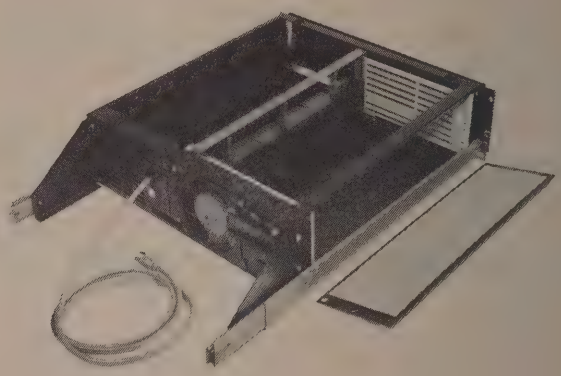
For Four-Slot or Nine-Slot System Units

The H909 Series of Module Enclosures—Logic Boxes—are designed to provide compact attractive enclosures for DIGITAL's single-height through hex-height module boards. Maximum capacity is the equivalent of nine hex-height boards (i.e. 54 single-height). Both standard length and extended length boards can be accommodated. Room is available to incorporate a power supply in H909-A and H909-C while H909-BA comes equipped with an H755 power supply. The H755 Power Supply provides ±15V dc at 2A and +5V dc at 13A. A line cord and circuit breaker are also included.



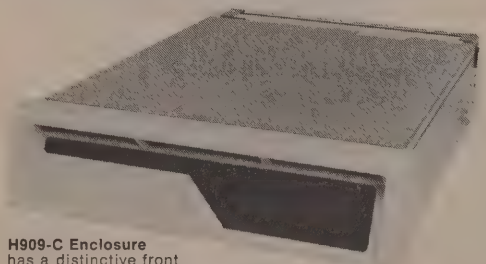
H909-A, -BA Enclosure
equipped with chassis slides and bracket for mounting in 19″ rack. Note front Bezel Panel matches 5¼″ Cover Panels on DIGITAL's Cabinets.

H909-A Enclosure is primarily designed to accommodate nine-slot System Mounting Units and can optionally be equipped with either an H034 nine-slot mounting frame, or H934-CB System Mounting Unit that itself is equipped with six H863 and three H8030 Connector Blocks, or the UNIBUS nine-slot unit BB11-B. Note the LSI-11 System Unit DDV11-B *does not* fit into this enclosure. A +5V dc at 7A power supply H726-B can also be ordered. This supply mounts on an H034 mounting frame which must be ordered separately specifically for the power supply.



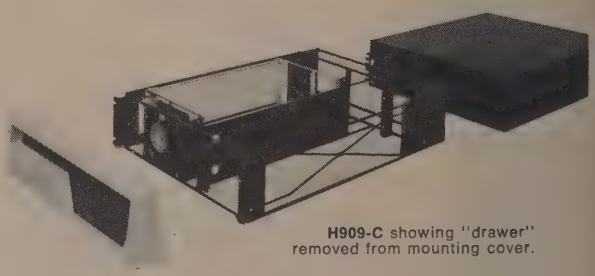
H909-A showing optional equipment installed.

H909-BA Enclosure is the same as the H909-A with the exception that the H755 Power Supply is included. All other options must be ordered separately.



H909-C Enclosure
has a distinctive front panel that can be drilled to install lights or switches. Table top or 19″ rack mounting.

H909-C Enclosure is more versatile than the H909-A or H909-BA units. It can accommodate both four-slot and nine-slot System Mounting Units. Or it can house other non-standard mounting arrangements if compatible mounting frames (H033 and H034) with Connector Blocks (such as H803) are employed. One or two four-slot System Mounting Units or one nine-slot unit can be accommodated. Additionally the LSI-11 System Unit DDV11-B *does* fit in this enclosure. The front panel can be drilled for customer installed lights and switches. This enclosure can directly mount without additional hardware the following system units and mounting frames: DDV11-B, H934, H933 Series, BB11 Series, DD11 Series, any DECkit 11, and mounting frames H033 and H034.



H909-C showing "drawer" removed from mounting cover.

All the H909 Series can be mounted on 19″ racks or can be used as stand-alone table-top enclosures. H909-C mounts directly on the 19″ rack by attaching the ears on the enclosure cover to the rack. The inside "drawer" then can be pulled out to a "stop" position for servicing. H909-A and -BA require optional chassis slides and brackets. Included with all enclosures are a cooling fan, card guides (card cage), cable restraints, and a front bezel. H909-A and -BA have a top cover and removable side cover.

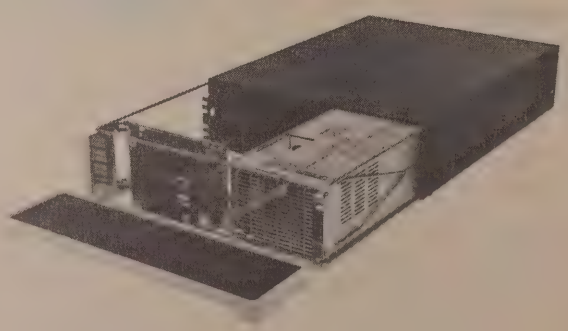
EXPANSION MOUNTING CHASSIS — BA11-LE

BA11-LE is a general purpose PDP-11 expansion mounting chassis (5¼ by 19W by 25″D) equipped with power supply, front mounted cover panel, and two fans for cooling the power supply and logic bays. A surrounding chassis envelope similar in construction to that of the H909-C facilitates mounting the BA11-LE in cabinets pre-drilled at standard EIA spacings. The 115 Vac input H777-CA power unit supplies 32A of output power at +5 Vac with regulators to support either MOS or core expansion memory.

The chassis can optionally be equipped with up to two DD11-CK or one DD11-DK SPC (Small Peripheral Controller) system units thus enabling the BA11-LE to support the expansion requirements of a wide variety of PDP-11/04 and PDP-11/34 based systems. UNIBUS access to the BA11-LE chassis is gained by means of the appropriate length BC11A UNIBUS cable which must be ordered separately.

When equipped with the DD11-DK nine by six slot system unit, the BA11-LE can accommodate up to nine hex size modules.



The BA11-LE is supplied with an internal power cable harness which mates directly to the DD11-CK and -DK system units.

POWER SUPPLIES

POWER CONTROLLERS AC VOLTAGE

These power controllers control and distribute ac voltage to power supplies, fans and other ac-operated devices in a system. Ac receptacles on the front panel are used to connect to system points requiring ac power. Four switched dual receptacles and two unswitched duals are provided. The switched receptacles are activated either remotely or locally by panel switch selection. Power to the controller inputs is via a line cord. Controllers mount in a 19″ rack. 861-A requires an input of 90-130V ac, 2 phase, 16A per pole to output 90-130V ac at 12A for each ac outlet. 861-C is a single-phase input device (24A per pole) with a 12A output at each outlet. Input/output voltage is 90-130V ac. The 861-D requires an input of 90-130V ac, 3-phase, 24A per pole to output 90-130V ac at 12A for each outlet.

digital DISK DRIVES

DIRECT SALES CATALOG

ADD-ON RK05 DISK DRIVES

DIGITAL'S DIRECT SALES CATALOG now offers catalog ordering of Add-On RK05 disk drives. DIGITAL's rugged and field proven RK05 is one of the most successful disk products in the mini-computer industry. Worldwide, Digital has over 35,000 RK05 disk drives presently installed. DEC computer system customers, who currently use DIGITAL disk drive subsystems incorporating RK05 disk drives (RK11 for PDP-11's and RK8 for PDP-8 configurations), can now increase the disk storage capacity of their systems EASILY and QUICKLY by ordering Add-On RK05 disk drives through this catalog. And at the same time receive the benefit of the catalog's discount policy.

Two basic models are offered: the RK05J which has removable cartridges, and the RK05F with non-removable storage media. Since RK05 disk controllers support multiple disk configurations, it is not necessary to purchase additional interfaces for a system. For example, up to four RK05J's or two RK05F drives can be interfaced to a PDP-8 system with one controller. On PDP-11 systems, up to eight RK05J or four RK05F drives can be utilized via a single controller.

Total system compatibility and full DEC field service maintenance features are guaranteed. To insure proper disk installation and warranty verification, the field service installation charge is included as part of the RK05 purchase price. Simply call the nearest DEC field service office when the RK05 arrives and be assured of fast and trouble-free system installation. The RK05 disk drives have the following features:

Capacity
- RK05J has removable on-line storage of 2.5 million bytes per drive with PDP-11 format or 3.2 million bytes per drive with PDP-8 format.
- RK05F has non-removale on-line storage of 5 million bytes per drive with PDP-11 format or 6.64 million bytes with PDP-8 format.

Ease of Use
- Convenient system operation.
- Simple disk-to-disk copying procedure.
- Easy handling with front loading cartridge.
- Rack mounted drives for flexible configurations.
- Disk capacity easily expanded.

Speed
- Fast access (10 msec track to track).
- Fast data transfer (1.44 megabits per sec.).
- Overlapped seeks for improved throughput.

Reliability
- Transfer verification.
- Accurate positioning.
- Dust protection.
- Wide operating environment from 50°F to 104°F.

Software Compatibility
- PDP-11 support by RT-11, RSK-11M, RSX-11D, RSTS/E, IAS and MUMPS-11.
- PDP-8 support by OS/8 and RTS/8.

Hardware Compatibility
- Mounts in standard DIGITAL cabinetry.
- RK05J uses DECpack compatible cartridges.

SYSTEM OPERATION

Multiple drive configurations have independent positioners for each drive which offer the user convenient system operation. Information is easily copied from one disk to another; in mixed drive configurations, the operating system and user programs can be readily transferred onto the RK05F or backed up for off-line storage on RK05J cartridges. When disk cartridges need to be removed, only the drive involved is placed off-line. This allows the computer system to remain operational while removable cartridges are being changed, an important feature in multi-user and multi-task environments.

The RK05F has been designed to appear to a controller as if there were two logical RK05J drives connected to it. This design feature permits RK05J and RK05F drives to be easily mixed on all PDP-11 and PDP-8 computer systems. More importantly, the RK05J and RK05F drives are fully compatible in terms of software, allowing for easy expansion of disk capacity with no need for time consuming and extremely expensive program conversions.

The RK05F starts at an even numbered position on the controller and utilizes two drive positions instead of the single position utilized by the RK05J. On PDP-11 systems the RK05F can assume logical positions of (0,1), (2,3), (4,5), or (6,7) on the controller. Since the first RK05J drive is included with the controller, the maximum system configurations for a PDP-11 are: eight RK05J drives: six RK05J drives plus one RK05F; four RK05J's plus two RK05F's; or two RK05J's plus 3 RK05F's.

On the PDP-8, the RK05F can assume logical positions of (0,1) or (2,3). Maximum system configurations for the PDP-8 are four RK05J's, or two RK05J's plus one RK05F.

Both subsystems offer fast access and fast data transfer for maximum system throughput. In addition, the sophisticated controller can overlap seeks on multi-drive systems: while one drive is performing a read or write operation, other drives can be seeking new data tracks. Overlapped seeks are currently supported by RSX-11D, RSTS/E and IAS on all RK05J systems but not on mixed RK05J/RK05F systems.

In order to assure accurate storage and transfer, RK05 subsystems employ hardware features which verify the correct track selection, provide a checksum, and perform a write check function. Also, the voice coil positioner and an optical position transducer provide fast access time and accurate positioning.

An emergency retract power supply automatically forces the heads to their home position if line power fails, thus protecting the disk from damage.

ORDERING PROCEDURE/REQUIREMENTS

The installation and warrantly verification charge must be added to the price of the RK05(s) ordered. The cost involved includes two elements:

a) RK05 Disk Drives ordered from this catalog are installable only on systems supported by current DIGITAL Field Service Maintenance Contracts. A copy of this contract must accompany all orders. Orders will be accepted and processed after the system configuration has been reviewed by DIGITAL with the local Sales/Field Service Office.

A fixed fee covering installation and 90-day on-site warranty has been included in the price of each RK05 drive.

b) A mileage charge computed from the Mileage Charge Table must be added to the order. List the mileage and amount separately on your order. The mileage used should be measured by a straight line from the nearest DIGITAL Field Service Office. All Field Sales Offices have associated Field Service Offices. Consult listing on page 174 for closest office. The mileage charge applies once for each group of RK05's installed at one time.

MILEAGE CHARGE TABLE

Miles	Charge
0-100	**No Charge**
101-200	**$150**
Over 200	**$250**

DIRECT SALES CATALOG

DIGITAL
Your One-Stop SUPPLIES Solution

DIGITAL's Direct Sales Catalog maintains a complete line of computer supplies specifically designed for use with your DIGITAL computer system(s). These products enable you to operate your equipment reliably and efficiently. DIGITAL supplies offer the following features:

- Guaranteed compatibility with DIGITAL equipment. This means fewer errors, and less down time.
- Protection against hardware damage and data loss.
- Continued effectiveness of DIGITAL warranties and service agreements.
- Off-the-shelf availability ensuring quick delivery and lower inventory needs.

The following supply items enhance the performance and reliability of DIGITAL's systems:

- Magnetic disk media including disk packs, disk cartridges and floppy diskettes. The same Quality Assurance inherent in DIGITAL's computers is also built into its magnetic media.
- Self-contained disk cartridge cleaners designed to accomplish fast and efficient cleaning of front and top loading magnetic disk cartridges.
- Ribbons for DIGITAL's DECwriter and DECprinter terminals. A unique non-abrasive ink is matched to print heads to produce excellent print quality and lengthen the print head operating life.
- Word processing supplies including nylon and mylar ribbons, a choice of eleven print wheels, and a filter screen for video terminals.

The Direct Sales Catalog offers cabinetry to maintain supplies and protect your magnetic media when not in use. Cabinet interiors can be custom-configured with various options to meet individual needs. Options can be conveniently re-arranged or changed at any time to adapt to future requirements. In addition, there are paper baskets, work shelves, term tables, tape racks, paper tape trays, and multipurpose binders.

All supply items are guaranteed free of defects in material and workmanship. To avoid damage during material handling and storage, supply products are prepackaged in DIGITAL designed containers.

DISK CARTRIDGES

RK06 AND RK07 DISK CARTRIDGES

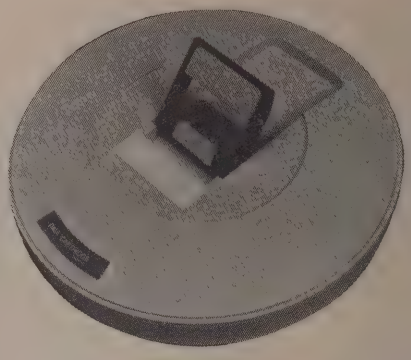
The RK07 and RK06 disk drives are high performance, medium capacity storage devices. Using technology similar to the RP05 and RP06 drives, the RK07 and RK06 provide the reliability and features of a high capacity drive in a medium capacity, subsystem.

The storage media, designed for and matched to the RK07 and RK06 drives are cartridges manufactured by DIGITAL under strict quality control. The RK07 is a double density version of the popular RK06 disk cartridge. The disk cartridges have two platters and four recording surfaces: three for data and one for servo control and tracking information. The platters and drive interfacing hub are enclosed in an impact-resistant mounting cartridge which provides maximum protection from dust and other contaminants.

The cartridges load easily onto the drives from the top. Handling is simplified by a built-in, 3 function handle that a) releases the protective cover from the cartridge; b) releases the cartridge from the drive; and c) is used to carry the cartridge.

The disk cartridges have been designed for both high reliability and convenience. When a pack is stored, the impact-resistant plastic cartridge completely encloses and seals the recording surfaces against dirt and contamination and protects the hub against damage. Disk cartridges are light-weight, easy to carry, and may be stacked for easy storage. Because they are top loading, and magnetically secured and aligned to the drive, they can be mounted simply and securely.

All disk cartridges are delivered pre-formatted for PDP-11 and VAX-11/780 systems with 22 sectors per track. Bad blocks are pre-initialized during manufacturing to insure that all sectors marked as good can be read by any drive. This saves valuable system time and increases data integrity. Cartridges can also be reinitialized on-site without destroying the original bad block marking. If desired, packs may be reformatted on-site. RK07 and RK06 cartridges are labelled and color-coded for easy identification. Interlocks are built into the drive so that RK07 cartridges cannot be mistakenly mounted in an RK06 disk drive and vice versa.

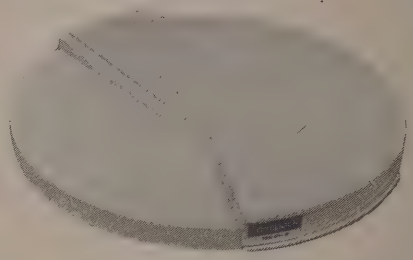


RK07 AND RK06 Disk Cartridge

Type	RK07 Cartridge	RK06 Cartridge
Formatted capacity per cartridge	28 Million bytes	14 Million bytes
Surfaces per cartridge	3 data +1 servo	3 data +1 servo
Sectors per track	22	22

RK05 DISK CARTRIDGES

Your best assurance of performance compatibility with DIGITAL disk drives is to use DIGITAL disk cartridges exclusively. The disk cartridge for RK05 series drives is a high precision magnetic coated recording disk and hub assembly for use with DIGITAL's PDP-11 and PDP-8 computers. The DIGITAL disk cartridge is designed with special internal clearances at four key points. This eliminates friction caused by the disk hub rubbing against the inside of the cartridge — a problem that could create computer errors when non-DIGITAL disk cartridges are used with DIGITAL drives. This special feature results in smooth, problem-free operation.



RK05 Disk Cartridge

RK05K-8
For use with RK05/RK8E Disk Drives on a PDP-8. Cartridge has a storage capacity of 1.6 million words with 16 sectors per track and 2200 bits per inch.

RK05K-11
For use with an RK05 Disk Drive on a PDP-11. Cartridge has a storage capacity of 1.2 million words with 12 sectors per track and 2200 bits per inch.

RL01 DISK CARTRIDGES

The RL01K-DC is outstanding in its simplicity and reliability. It's the next step for the interactive user who wants more than a floppy disk for use on low end PDP-11 UNIBUS systems, 11/03 LSI-11 bus systems and PDP-8A OMNIBUS systems. The media, designed for and matched to the RL01 Disk Drive, is assembled and formatted by DIGITAL under strict quality control, and is a top loading, 5.2 megabyte disk cartridge. The cartridge has one platter with two recording surfaces. All disk cartridges are delivered pre-formatted. Bad blocks are pre-initialized and factory recorded on the last track to insure that the limited number of sectors containing media defects are not used for data recording. The media features a new embedded servo track-following system for accurate disk head positioning and increased data integrity. The pre-recorded servo information is therefore interspersed with the data and is read with the same head that reads and writes data. This means that no cartridge surface is reserved for servo information — both surfaces of the cartridge are used for data recording. Data integrity and reliability are virtually assured, since the servo information is continually sampled by the same heads that are used to read and write the data. This technique protects the user's data more effectively than conventional servo technologies.

CARTRIDGE STORAGE UNITS

These durable storage units provide a convenient method for storing five RK05, or two RK06, style cartridges horizontally. They are designed to mount into DIGITAL's standard system cabinetry so that cartridges are in close proximity to the drive and are well protected from environmental hazards. Brackets, bezel and hardware for secure mounting are included.

Cat. No.	For Cartridge	Capacity (Cartridges)	Cat.	Cash	Shipping Weight

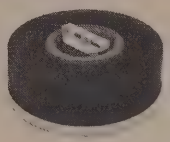
DISK PACKS — For Disk Drives



Disk Pack

These packs are for use with DIGITAL's high-performance Disk Drives. The removable disk pack offers the flexibility of virtually unlimited off-line storage capacity. Each pack is enclosed in a strong plastic cover to protect the entire pack from damage and to prevent particles from entering the pack assembly while in storage. Flag free disk packs are available for the RP03 Disk Drive (P/N RP03-PX), RP04 Disk Drive (P/N RP04-PX), and the RP06 Disk Drive (P/N RP06-PX).

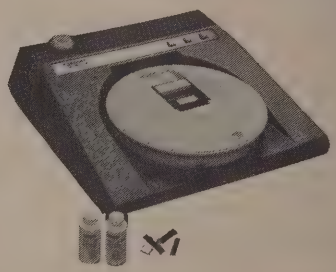
DISK CARTRIDGE CLEANERS

DIGITAL'S Disk Cartridge Cleaners are self-contained cleaning systems that are safe, efficient, and extremely easy to operate. They are designed to clean front loading (Type 2315) magnetic disk cartridges, including DIGITAL's RK05, RK06 and RK07 series. The cleaning unit requires no special operator training and can significantly minimize disk problems and extend the useful life of the disk cartridge.

DIGITAL Disk Cartridge Cleaners are U.L. listed. They are designed to remove all undesirable contaminants that can cause serious head crashes (oxide redeposits, dust, smoke, oil particles, paper bits, and fingerprint smudges). Cartridges containing valid data can be cleaned with complete confidence because only soft cleaning pads containing special solvent cleaning fluid come in contact with the disk surface. A microscopic filter system keeps contaminants out of the cleaning system.

The cleaner features a self-seating device which allows a cartridge to be easily loaded without damaging the magnetic recording surfaces. A unique interlock system further prevents damage to cartridges and insures correct installation. Three panel indicators assist the operator through the cleaning procedure. The entire cleaning cycle requires only three minutes. Each cleaner is shipped with one supplies kit.



Complete installation and operating instructions are also included with each unit.

Specification:
Size: 23″ L x 23″ W x 9″H
Weight: 23 lbs.
Operation: Cycle time three minutes

DISKETTES — For RX01 Floppy Disk Drive

The floppy disk is a removable storage medium used with DIGITAL's Floppy Drives. The flexible oxide-coated disks are initialized and provide random-access data storage capability. The diskette contains 77 tracks and 26 sectors per track. Each sector can store 128 8-bit bytes for a total formatted capacity of 256,256 8-bit bytes (approximately 3,000 80-column cards). Floppy diskettes come packaged in the DIGITAL Floppy Case made of strong polypropylene to withstand rugged handling, storage, and shipping. The floppy case safeguards against environmental contaminants such as dust and debris which may affect the reliability of recorded data. The case holds floppies vertically within a blue polystyrene insert to allow convenient diskette selection and replacement. Bookshaped case is suitable for desk-top, bookshelf, or library and can be used while sitting at a desk, terminal, or minicomputer system. Empty diskette boxes are also available.

An alternative method of storing floppies is in the floppy binder. Blue, 3-ring binder contains clear vinyl inserts to keep floppies well protected, organized, and easily accessible. Binder minimizes diskette loss or damage that can result from continual retrieval and replacement. Binder comes with five inserts and fits conveniently on a desk, bookshelf, or inside a drawer. Each insert holds two floppy diskettes. Total binder capacity is ten inserts and twenty floppies. Additional clear vinyl inserts are optionally available in packages of five.

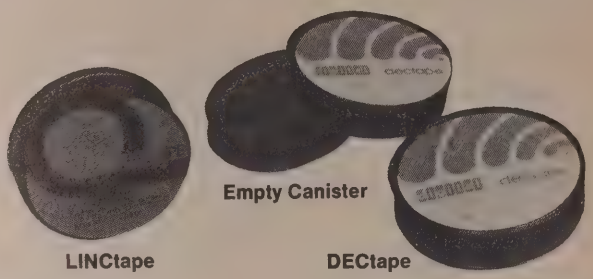
DECtape AND LINCtape

The mylar tape has a specially formulated plastic sheath overcoating which serves as a protector for the heads. DECtape is offered certified (formatted) and uncertified (unformatted). LINCtape is uncertified. DIGITAL guarantees that uncertified tape is certifiable. DECtapes come in blue translucent plastic canisters. LINCtapes are in green canisters.



Cat No.	Type	Length	Certified?	Use With	Cat.	Cash	Shipping Weight

Insure your System's Tomorrow with DIGITAL SUPPLIES Today

All of our SUPPLIES are carefully manufactured and stringently tested before we even consider offering them to you — our customer. This is done to provide you with the assurance that DIGITAL SUPPLIES will capture and maintain the true technical capabilities of your equipment and pave the way for consistently reliable performance. DIGITAL is your total one-stop SUPPLIES solution and we are constantly striving to provide the most responsive and efficient means to answer your unique SUPPLIES needs.

If you desire more detailed information on DIGITAL SUPPLIES, simply dial our convenient 800 number and we will be more than happy to send you a copy of our full color brochure. Dial today — it only takes a moment to insure years of system reliability.

CALL: 800-258-1710 (N.H. Residents 603 - 884-6660) 8:30 am to 5 pm EST.

TAPE CASSETTES For TU60 Drives

DIGITAL's Cassette unit houses a plastic coated mylar tape. The heavy-duty tape provides long tape life (typically 2000 end-to-end passes). DIGITAL's Cassette units do not use pinch rollers, capstan drive, brakes, clutches, belts, or pulleys. The tape path is simple; only the head touches the tape. DECassette has a storage capacity of 92,000 bytes and measures 150 feet in length. A TU60-LH binder is available. Standard size blue binder holds up to 12 cassettes.

Cat. No.	Description	Cat.	Cash	Shipping Weight

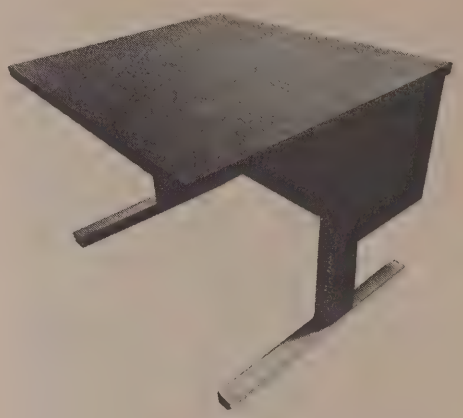
digital FURNITURE

DIRECT SALES CATALOG

Tables



This table provides a convenient work surface. The surface is walnut finish. The table is wide enough so that terminals such as DECscope, as well as papers, print-outs, etc., may be placed on the surface. The shroud in the rear is ideal for holding a data set, or other items. The two sides have cable openings so that a complete unit appears neat and attractive. Shipping Weight: 50 lbs.

The H970-EB measures 27H by 36W by 30″D (keyboard height). A set of casters, 12-11526, can be ordered for the table. Installed, they increase table height by 2″.

Cat. No.	Description	Cat.	Cash	Shipping Weight
B-**H970-EB**	Small Table	**$228 each**	**$218 each**	50 lbs.
B-**12-11526**	Caster Set	**19 each**	**18 each**	1 lb.

Free Standing Table — H970-HB

The H970-HB serves as a support table for peripheral devices such as the VT52 DECscope in office environments. The table consists of a walnut wood-grained, scratch-resistant top, medium grey side rails, and an off-white modesty panel. The leading edge of the top is beveled for additional comfort. The H970-HB includes four adjustable leveling feet for firm positioning. Dimensions are 27H by 24W by 30″D.

Cat. No.	Cat.	Cash	Shipping Weight
B-**H970-HB**	**$162**	**$155**	40 lbs.

Terminal Stand

DIGITAL's unique Terminal Stand features a rounded black steel center pole that attaches to five pedestal legs. Casters attach to each leg to facilitate unit mobility. The following terminals are supported on a base plate that is securely mounted to the center pole: VT50, VT52, VT55, VT61, VT61/t, VT71, and VT71/t. Terminal Stand combines functional design with contemporary elegance. It measures 26″ in height and requires minimal floor space when fully assembled. Each stand is shipped unassembled for ease of storage and to reduce shipping costs. Instructions and necessary tools for easy and quick unit assembly are included. Please use Part No. VT71-ST for Terminal Stand to be used with the VT71 and VT71/t terminals.

Cat. No.	Description	Cat.	Cash	Shipping Weight

MEDIA STORAGE CABINET

DIGITAL's cabinets add complete organization, durability, and security for your operating supplies and accessories. The cabinets provide convenient and easy access storage facilities for cartridges, disk packs, DECtapes, MAGtapes, ribbons, paper tape, and accessories. Each cabinet is of all-welded steel construction and has a high impact plastic rollaway tambour door in off-white with a blue accent strip.

Cabinets require only 18½ inches outside depth. The centrally located handle facilitates easy opening and closing. A single door lock resists tampering to insure security.

Cabinets are available empty and in two different sizes. Cabinets can then be custom configured to meet individual storage needs.

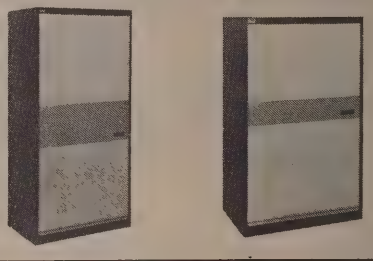
BASIC CABINETS

Large Cabinet — H980-BA

The large empty cabinet measures 73″H x 38″ W x 18½″ D. The unit provides 65″ of inside mounting space for the options which are described on the following pages.

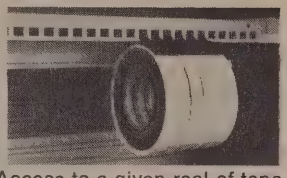
Small Cabinet — H980-BB

The small empty cabinet measures 61″ H x 38″ W x 18½″ D. The unit provides 52″ of inside mounting space for the options which are described on the following pages.



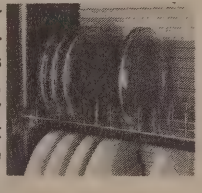
CABINET OPTIONS

MAGtape Hanger Bar — H980-CA



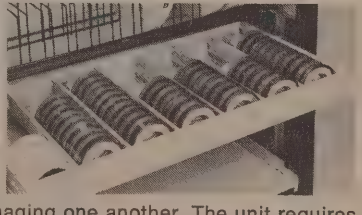
The tape hanger bar is designed to accommodate one-half inch industry-compatible magnetic tape in tape seal only. Up to 35 of either 600-foot, 1,200-foot or 2,400-foot reels of tape may be stored in any combination. Access to a given reel of tape is accomplished by pressing the reel inward allowing the spring loaded stabilizer to gently swing the reel outward where it can be grasped. The unit requires 14¾″ of inside mounting space for 2400-foot reels.

MAGtape Storage Rack — H980-CB



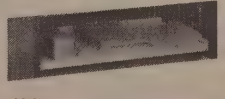
The tape storage rack provides slots for storing reels of one-half inch industry-compatible magnetic tape in canisters only. Up to 20 of either the 600-foot, 1,200-foot or 2,400-foot reels of tape may be stored in any combination. The unit requires 13″ of inside mounting space for 2400-foot reels.

Disk Storage Rack — H980-CC



The storage rack provides slots for securely storing up to 14 RK05K style disk cartridges. Slots are adequately spaced to allow easy cartridge replacement and retrieval and to prevent cartridges from scraping and damaging one another. The unit requires 17″ of inside mounting space.

Fixed Shelf — H980-CG



The fixed shelf (does not roll) provides storage space for miscellaneous items such as cards, forms, and printer paper. The shelf is secured so that heavy items may be stored.

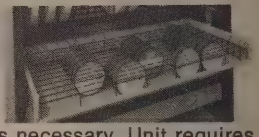
Roll-out Shelf — H980-CD

The roll-out shelf either functions as a work surface shelf for disk packs or, combined with the divider kit (H980-CH) creates a DECtape Storage Drawer for up to 72 tapes in canisters. The unit requires 7″ of inside mounting space for RP02-P, RP03-P, RP04-P, RP06-P and RM03-P disk packs or 4¾″ of inside mounting space for DECtapes and RK06 cartridges.

Divider Kit — H980-CH

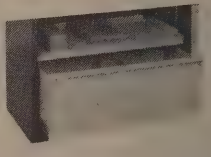
The H980-CH divider kit provides partitions within the H980-CD roll-out drawer, so that DECtape, cassettes, or any other small items may be divided into logical units, and stored economically.

DECtape Wire Frame — H980-CK



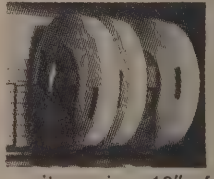
The H980-CK DECtape wire frame provides slots so that up to 77 reels of DECtape in canisters may be stored conveniently and systematically. The wire frame fits easily within the H980-CD roll-out drawer. No screws or attachments necessary. Unit requires 4¾″ inside vertical mounting space for DECtapes.

Storage Drawer — H980-CF



The storage drawer is ideal for storing a variety of items such as maintenance manuals, paper tape trays, binders, and many other "hard-to-find-a-place-for" items. Roll-out drawer measures 12″ H x 31½″ W x 12″ D. The unit requires 13″ of inside mounting space.

RK06 Storage Rack — H980-CL

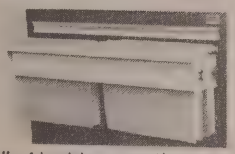


The rack provides slots for securely storing up to 9 RK06 style cartridges. Slots are adequately spaced to allow easy cartridge replacement and retrieval and to prevent cartridges from scraping and damaging one another. The unit requires 16″ of inside mounting space.

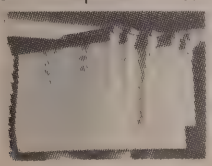
MEDIA STORAGE CABINET

CABINET OPTIONS (Cont'd)

Hanger Binder Frame — H980-CE



The hanger frame is designed with two sections for storing printout binders and legal documents. Hanger frames accommodate printout binders with tabs or "ears" that hook onto the frame. Frame rolls out for rapid access. The unit requires 13" of inside mounting space.



Hanger Bar — H980-CM

The documentation hanger bar is designed for use with both the Data Binder (H980-CN) and Paper (H980-CP) Hangers. It provides a unique method for storing computer printouts and makes frequent retrieval of data convenient. Accommodates attachments for 14½ x 11" data binders and 8½ x 11" paper. Sturdy metal bar has end brackets that mount into supplies cabinets (H980-BA and H980-BB). Unit requires 2" inside mounting space.

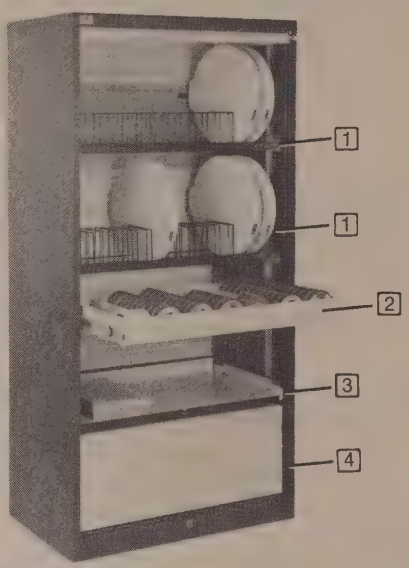
Data Binder Hanger — H980-CN

Sturdy plastic hanger attaches to documentation hanger bar (H980-CM) to store 14⅞ x 11" data binders containing computer printouts. Hanger comes with front and back flaps to enclose computer printouts. Can mix and match the two size hangers. Available 10 hangers per package. Unit requires 14½" of inside mounting space.

Paper Hanger — H980-CP

Sturdy plastic hanger attaches to documentation hanger bar (H980-CM) to store 8½ x 11" paper. Hanger comes with front and back flaps to enclose computer printouts. Can mix and match the two size hangers. Available 10 hangers per package. Unit requires 12" of inside mounting space.

TYPICAL LARGE CABINET



As shown the cabinet is equipped with the following options:

1. Two H980-CC Disk Cartridge storage unit handling 28 RK05K Disk Cartridges.
2. One H980-CD roll-out-drawer with one H980-CH divider set for storing 72 DECtapes.
3. One H980-CG fixed shelf for storage of forms, punched cards, etc.
4. One H980-CF storage drawer for utility purposes.

DIRECT SALES CATALOG

TECHNICAL DOCUMENTATION

New to this Direct Sales Catalog edition is the Technical Documentation Section. Here you will find a selection of our most commonly requested technical reference manuals. For your convenience, the listings have been assembled on the basis of operating system software. For instance, all of the RT-11 (Real Time - 11) manuals are listed in the RT-11 section.

SPECIAL TERMS AND CONDITIONS

Any discrepancies on received manuals must be reported within 30 days. Goods ordered and shipped may not be returned for credit.

All prepaid Technical Documentation orders will be shipped postage paid. Orders not prepaid will be shipped F.O.B. point of origin and shipping charges will be added to the invoice. Be sure to add appropriate sales tax amounts to your order.

RT-11 (Real Time Foreground/Background System) REFERENCE MANUALS

RT-11 is a single-user disk operating system designed for interactive program development and on-line applications. In a foreground/background environment, the user can run a real-time application in the foreground while interactively developing a program or running a batch stream in the background. RT-11 includes two compatible monitors and a variety of program development and system utilities. As options, RT-11 supports FOCAL, FORTRAN IV and BASIC languages. BASIC is offered in a single-user or multi-user version.

RT-11 runs on a PDP-11 with between 8K and 30K words of memory. In addition, RT-11 requires a console terminal and one of the following random-access devices: TC11 dual DECtape drive, RK11 disk cartridge drive, RX11 floppy disk drive, RF11 fixed-head disk with floppy disk, RK11 disk, DECtape or paper tape reader/punch, RP02 disk drive with floppy disk, RK11 disk or DECtape drive, or RS03 or RS04 disk drive with RK05 disk drive. RT-11 also supports a line printer, magnetic tape drives, a card reader and cassette drives. In addition, the high-level languages provide access to a variety of graphics and lab display peripherals.

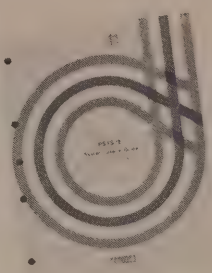
DIRECT SALES CATALOG

TECHNICAL DOCUMENTATION

RSTS/E (Resource Time Sharing System) REFERENCE MANUALS



RSTS/E is a timesharing system that allows up to 63 simultaneous users to process data in interactive mode using the BASIC-PLUS language processor. As options, the system supports a COBOL language processor and PDP-11 SORT file sort utility and a FORTRAN IV compiler system. BASIC-PLUS jobs can range from small desk calculator jobs to large 16K word programs and can use chaining and interjob communication features to execute even larger programs. COBOL programs can have a maximum size of 28K words. RSTS/E also includes a comprehensive set of easy-to-use system utilities for the system manager and timesharing users.

As a general rule, RSTS/E can support up to 63 jobs on a PDP-11/70, up to 32 jobs on a PDP-11/45 and up to 24 jobs on a PDP-11/40 central processor. The actual number of jobs a configuration can support depends on the application's characteristics and the amount of memory available. RSTS/E requires at least 32K words of parity memory to run BASIC-PLUS jobs only or at least 64K words to run both BASIC-PLUS and COBOL or FORTRAN IV jobs. A minimum peripheral complement includes a console terminal and a disk system. The system device can be any single RP series disk system or a dual drive RK11 disk system. A TU16 or TM11 magnetic tape or TC11 DECtape system is required for system generation and back-up unless the disk system is a dual drive RK11 system.

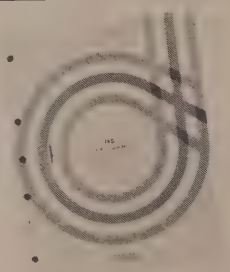
IAS (Interactive Application System) REFERENCE MANUALS



IAS is a large, general-purpose operating system that runs on a PDP-11/70 or PDP-11/45 Processor. It is a multi-user time-sharing system that supports concurrent interactive, batch and real-time applications. It includes the MACRO assembler. As options FORTRAN IV, FORTRAN IV-PLUS, COBOL and BASIC language processors can be added. IAS features:

- Multiple programming languages: FORTRAN, BASIC, COBOL and MACRO
- A single, easy to learn and use interactive command language
- Priority scheduling for real-time tasks
- Submission of batch jobs from interactive terminals
- Timesharing services for development of interactive application programs
- A simple internal software interface for the development and use of special-purpose, multi-user interactive applications
- A sophisticated file system providing device independence, file protection, sequential and random file access
- Dynamic allocation of system resources
- Use of shared, reentrant code to minimize memory requirements
- System management facilities for system configuration, generation and control
- Facilities to account for and restrict the use of system resources

TECHNICAL DOCUMENTATION

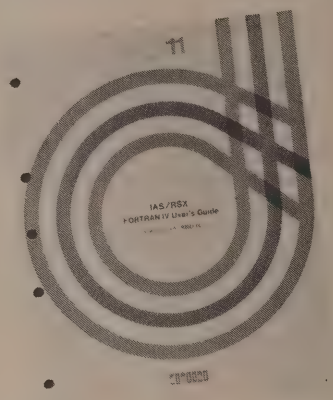
RSX-11 (Real Time Multiprogramming Family) REFERENCE MANUALS

RSX-11 is a unique family of compatible real-time multiprogramming operating systems for the PDP-11 computers. The RSX-11 family includes: RSX-11D, a large, multi-purpose operating system for dynamic environments; RSX-11M, a compact, efficient operating system for relatively stable environments; and RSX-11S, a small, execute-only operating system for dedicated application environments.

The RSX-11 operating systems comprise a compatible hierarchy. The program interface to RSX-11M is a proper subset of RSX-11D. Programs written to run under RSX-11M will run under RSX-11D following a re-link of the object form of the program on an RSX-11D system. RSX-11S is a memory-based proper subset of RSX-11M fully compatible internally. A program written to execute as a task under RSX-11S will execute under RSX-11M without change. It will also execute under RSX-11D following a re-link of the object form of the program.

RSX-11D includes an Executive to monitor and control system operation, a set of Monitor Console Routines (MCR) to enable the user to communicate with the system, a set of File Control Services (FCS), I/O device handler tasks, and a variety of system utility programs. Programs can be written in MACRO, FORTRAN IV, FORTRAN IV-PLUS and COBOL.

RSX-11M includes an Executive, MCR services, FCS file system, and system utility programs. Under RSX-11M, programs can be written in a subset MACRO, in a fully-compatible RSX-11D MACRO, or in FORTRAN IV or FORTRAN IV-PLUS. RSX-11M's MCR services and FCS file system are compatible to RSX-11D's. Device handlers under RSX-11D are loadable tasks to provide system flexibility, while device drivers in RSX-11M are built into the Executive during system generation to provide faster response.



Both RSX-11D and RSX-11M are multi-user systems. More than one terminal user can interface with MCR services simultaneously. An MCR facility allows users to create a file containing executable commands to control common sequences of operations. The MCR facility in RSX-11M systems allow the user to create indirect command files using a procedure control language to effect a multi-stream batch capability. RSX-11D provides a patch processor to handle single-stream batch operations.

HANDBOOKS

Listed below is a selection of DIGITAL's hardware, software and programming reference handbooks. These handbooks give excellent insight, both general and specific, into each respective topic. Both novice and experienced computer operators will find these books useful. Many have been selected by educational institutions as the basis for computer science and programming classes.

Also listed are DIGITAL's Programmer's Pocket Reference Cards. For many years these cards have been the working tools of computer programmers around the world. Each gives complete tables of the appropriate instruction sets and other useful information for the programmer.

HOW TO ORDER

Catalog Sales Desk
800-258-1710
(N.H. residents 603 - 884-6660).
From 8:30 am to 5 pm EST.

To ensure prompt delivery and accurate charges you must use one of the four methods outlined below. Choose whichever best suits your company's internal operations.

1. **Preprinted Order Form (Note A)**
A sample of this form — and detailed instructions for filling it in — are shown on page 155. We prefer you use this form. DIGITAL's Terms and Conditions for Catalog 1-78 (Note B) are printed on the reverse side. The submittal of your order on this form acknowledges your acceptance of these Terms and Conditions. For your review, the Terms and Conditions pertaining to Catalog 1-78 (Note B) are reproduced on page 159.

2. **Purchase Order and Preprinted Form**
If you submit your own Purchase Order you can simply attach a **signed** copy of DIGITAL's Preprinted Order Form (Note A) to signify your acceptance of the Terms and Conditions pertaining to Catalog 1-78 (Note B) as documented on page 159. Be sure to provide us with all the required information as detailed under **Ordering Information.**

3. **Purchase Order Only**
If you submit a Purchase Order and do not include DIGITAL's Preprinted Order Form you must incorporate this statement "Terms and Conditions of DIGITAL's Direct Sales Catalog 1-78 govern this order." These Terms and Conditions (Note B) are documented on page 159. Be sure to provide us with all the required information as detailed under **Ordering Information.**

4. **Phone Orders**
If you have a current approved Catalog Open Account (see definition page 156) call the Catalog Sales Desk to enter your order. Your order will be processed and scheduled but not shipped until we receive a confirming, acceptable written catalog order as described in 1 through 3 above. We can handle your call more quickly if you have the following information ready: catalog part number, quantity, description, billing address, and shipping address.

ORDERING INFORMATION

We must have the following information to process your order:

(a) Company Name, and Complete Address including ZIP Code.

(b) A Ship To address, if different from the company address.

(c) Name, Title, and Phone Number of Equipment Specifier (not purchasing contact, unless same).

(d) Tax Exemption Number if applicable. A copy of your Exemption Certificate is also required if not submitted with a previous catalog order. See **Sales Tax Information,** page 156.

(e) Purchase Order Number (for billing purposes only and for Catalog Open Accounts).

(f) State if you are subject to the Renegotiation Act.

(g) State if Transportation Insurance is required. See **Transportation Insurance,** page 156.

(h) Indicate which shipping method you require. Note that size and weight considerations sometimes limit your choice. See **Shipping and Delivery Information,** page 156.

(i) Give Quantity, Catalog Part Number, Description and Appropriate Price (Catalog or Cash) for each item. You can refer to the Product Index for a summary of all items and their prices. Include any special specifications (color, style, etc.) with the item description.

(j) Give the Shipping Weight for each item. For Modules you must check the Module Weight Chart on page 161 to compute the combined shipping weight of the Modules.

(k) Compute all taxes, shipping charges, and insurance costs in accordance with the instructions under **Sales Tax Information, Shipping and Delivery Information, Transportation Insurance.**

(l) Add costs in Items i and k. This is the Total Order Cost.

(m) When paying cash, remit the amount computed in (l) above. Pay by check or postal money order. Do NOT send currency or stamps. If the actual charges are less than you computed, DIGITAL will refund the difference provided it exceeds $2.

(n) **If your order is less than $35.00 you must pay cash.**

ADDRESS AND MAIL ORDERS TO:
Digital Equipment Corporation
Direct Sales Catalog, Dept. EM
P.O. Box 4202, Boston, MA 02107

Note A: Call Catalog Sales Desk for copies of the Order Forms.

Note B: Expiration date of Catalog 1-78 is June 30, 1979. If you are using this catalog after this date you must check with the Catalog Sales Desk for any changes affecting Terms, Conditions, Products or Prices. Although we expect most prices to remain unchanged for the life of Catalog 1-78, some may change. You will be informed of any change when we process your order.

IMPORTANT!

CATALOG NUMBERS VS MODEL NUMBERS

The Catalog Numbers published in this catalog relate only to purchases made through the Direct Sales Catalog. The **Bold Face** portion of each Catalog Number is the official DIGITAL Model Number. All invoices and packing slips will reference only the Model Number.

1. Put your company name and complete address, including Zip Code for **Bill To** information. If you want your order shipped to a different address, write this in the **Ship To** space.
2. Name, title, and phone number of **Equipment Specifier** (not purchasing contact, unless same).
3. Purchase order number (for Catalog Open Accounts and for invoicing purposes only).
4. Check off whether this order is taxable and include tax exemption number, if applicable (see notes under **Sales Tax Information). A copy of the exemption certificate must be attached if not submitted with a previous Catalog Order.**
5. Check if transportation insurance is desired. UPS or DIGITAL.
6. Check method of shipment (UPS, air, van). Verify that method selected will accept your shipment based on size and/or weight restrictions.
7. Check if you are subject to the Renegotiation Act.
8. Give the quantity, catalog number, description, appropriate price (depending on the discount taken), total price, and shipping weight for each part ordered, plus any special product specifications required, in the description. Compute Module weight as shown on page 161.
9. Add up amounts in the **Total Price** column and enter total in the **Total for Goods** block.
10. Add state and local taxes, if applicable (see notes under **Sales Tax Information).**
11. Add shipping charges only if paying cash and shipping via UPS. All other shipping methods will be prepaid by DIGITAL and added to the customer's invoice or billed by the carrier. (See instructions under **Shipping and Delivery Information.)**
12. Add insurance charges only if paying cash. (See instructions under **Transportation Insurance** to calculate UPS or DIGITAL insurance charges.) All Open Account customers requesting DIGITAL insurance will be billed these charges.
13. Total all of the above items. Cash customers should remit this total with their order, including shipping charges, insurance, and taxes. All cash orders should be paid by check or postal money order. Do NOT send currency or stamps. If the charge for equipment and transportation is less than the amount you send us, we will refund the difference provided it exceeds $2. **Cash is required on all orders totaling less than $35.**
14. Be sure and sign the order form. Orders cannot be processed without an authorized signature.

Address and mail orders to:

DIRECT SALES CATALOG

HOW TO ORDER

SHIPPING AND DELIVERY INFORMATION

DIGITAL will utilize the fastest service to your area by surface transportation unless indicated otherwise. Cash customers requesting UPS delivery and meeting weight and size limits of UPS may use the following charts to figure shipping and handling charges. Customers on the West Coast should indicate UPS Blue Label Service over regular UPS for faster delivery.

Use the Zip Code Chart for the continental U.S. and find the *first* three digits of your Zip Code to determine your zone. Then refer to the shipping rate chart for the charges appropriate to your zone according to the shipping weight of each item ordered. Figure UPS charges for each catalog item separately using the indicated shipping weight times the quantity. Then total the individual charges figured and remit the total amount. Unless otherwise stated, shipping weights are calculated to the nearest pound. Excess payments of transportation charges over two dollars will be refunded by check.

To calculate shipping charges for a module(s), first refer to the physical descriptions included with each module description. Modules are either standard-length or extended-length; single-height, double-height, or quad-height; and single-width, double-width, or triple-width. Then check the Logic Module Weight Chart on page 161 to determine shipping weight for each module size.

Some catalog products may exceed weight and/or size limitations (either individually or collectively) for shipment via UPS. These items will be shipped with freight charges collect (you will be billed by carrier), as will all cash orders when requesting shipment by air (except Blue Label Service).

All approved current Catalog Open Account customers should only indicate appropriate (by weight) and desired (surface or air) transportation mode. All shipping charges for open accounts will be prepaid by DIGITAL and added to the customer's invoice.

SALES TAX INFORMATION

Unless an *exemption certificate* which is valid for the state into which your order is being shipped has been submitted with this, or a previous catalog order DIGITAL must by law collect state sales tax for the following states at the rates shown below.

We are also required by law to collect any city, county, parish, or rapid transit taxes within these states. If your order is being shipped to an area which has a local tax of this type, please include such additional tax with your payment.

CATALOG OPEN ACCOUNTS

Catalog Open Accounts (net 30 days) will be granted to customers approved by the Catalog Sales Credit Department. To apply for Open Account Payment terms (net 30 days), call toll free 800-258-1710 (N.H. residents 603 - 884-6660) and ask for the credit desk.

10-DAY FREE TRIAL RETURNS

Before sending material back to DIGITAL for credit, call our Catalog Order Desk and ask for a Return Authorization Number and shipping instructions. Material shipped to us without an Authorization Number will NOT be credited to you.

TRANSPORTATION INSURANCE

UPS charges include a $100 value for insurance. Insurance rates for UPS orders over $100 can be calculated by adding 25¢ for each additional $100 value or fraction thereof.

All cash customers requiring non-UPS delivery and approved current Catalog Open Account customers clearly indicating "yes, in-transit insurance is desired" will be provided insurance on their orders while in-transit, and a charge of 50¢ per $100 of catalog price, or fraction thereof, will be made. Cash customers should include these charges in their payment.

CURRENT STATE SALES TAX TABLE

Taxes subject to adjustment without notice in event of Legislative change.

State	Percent	State	Percent	State	Percent	State	Percent	State	Percent
Alabama*	4	Hawaii	4	Maryland	5	New Jersey	5	South Carolina	4

DIRECT SALES CATALOG

HOW TO ORDER

Catalog Sales Desk
800-258-1710
(N.H. residents 603 - 884-6660).
From 8:30 am to 5 pm EST.

TERMS AND CONDITIONS OF SALE FOR CATALOG 1-78

1. PRICE/PAYMENT:

A. All orders submitted on DIGITAL's Catalog Order Form and accompanied by a check in the amount of the catalog price plus transportation (if shipped UPS), insurance, charge, and sales tax shall be accepted and processed unless Customer is otherwise notified by DIGITAL within ten (10) days of receipt of order. If Customer has an approved current Catalog Open Account, a check need not accompany the Order Form, but rather, at Customer's option, full payment shall be due within thirty (30) days from date of delivery. Notwithstanding the above, cash **is required for all orders of less than $35.**

B. All catalog prices are exclusive of transportation charges and sales, use, and other similar tax. All such charges and taxes shall be added to the Catalog price and paid by Customer to DIGITAL. To qualify for tax exemption, Customer must submit a copy of a valid Tax Exemption **Certificate with each order. Purchases are in accordance to current catalog prices only.**

2. DELIVERY:

All deliveries shall be F.O.B. DIGITAL's Factory. Risk of loss shall pass to Customer upon delivery by DIGITAL to carrier. For all shipments, except via UPS, insurance will be provided on the products while in transit and a charge of $.50 per $100 of Catalog price will be made if Customer clearly indicates in the block marked "YES, IN-TRANSIT INSURANCE IS DESIRED" on the Catalog Order Form. UPS shipping charges include insurance of $100. Additional UPS insurance coverage can be obtained by Customer at the rates specified in the *How to Order* Section. DIGITAL shall not be liable for any damages or penalty for delivery delays when due to causes beyond its reasonable control.

3. ACCEPTANCE:

Should the Customer, upon receipt of the Product, find it unsatisfactory for any reason, DIGITAL will refund Customer the Catalog price, provided Customer returns the Product to DIGITAL, transportation prepaid and insured, in the same condition as delivered and in the same DIGITAL or equally suitable shipping container within ten (10) days of receipt. Before returning the product, Customer must call DIGITAL for a return authorization number.

4. WARRANTY:

A. All Products (except Software) purchased from this Catalog are warranted as stated below for a period of ninety (90) days from date of initial delivery, except that the warranty period for W, M, and A Series modules is one (1) year.

B. All Products (except Software) are warranted against defects in material and workmanship under normal and proper use and in their original unmodified condition for the period set forth in Clause 4A above. If found defective by DIGITAL within the terms of this warranty, DIGITAL's sole obligation shall be to repair or replace (at its option) the defective Product. If DIGITAL determines that the Product is not defective within the terms of this warranty, Customer shall pay all costs of handling and return transportation. All replaced Products become the property of DIGITAL. As a condition of this warranty, Customer must obtain a DIGITAL Return Authorization Number, and must return all Products, transportation prepaid and insured, to the appropriate location, as specified in the *Service* Section of this Catalog.

C. Transportation charges for the return to Customer shall be paid by DIGITAL within the contiguous United States only. These warranties outside the contiguous United States are limited to repair or replacement only and exclude all costs of shipping, Customs clearance, and other related charges.

D. All Software Products with a DIGITAL Support Category of A or B are warranted to conform to the DIGITAL Software Product Description (SPD) applicable at the time of order. DIGITAL's sole obligation hereunder shall be to remedy any nonconformance of the software to the SPD. Such remedy shall be provided as specified in the Software Support Categories Addendum to the SPD for nonconformances reported to DIGITAL during the one (1) year period following delivery. Software with a designated Support Category of C is furnished on an "as is" basis.

E. EXCEPT FOR THE EXPRESS WARRANTIES STATED ABOVE, DIGITAL DISCLAIMS ALL WARRANTIES ON PRODUCTS, INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS; and the stated express warranties are in lieu of all obligations or liabilities on the part of DIGITAL for damages, including but not limited to special, indirect, or consequential damages arising out of or in connection with the use or performance of the Products.

5. SOFTWARE PRODUCT LICENSE:

Licensed software provided hereunder, including any subsequent improvements or updates, is furnished to Customer under a license for use on a single Unit and may only be copied in whole or in part (with the proper inclusion of copyright notice on the software) for use on such Unit. Customer shall not provide or otherwise make available the software, or any part thereof or any copies thereof, in any form to any third party. However, Customer may provide the software to a third party who agrees with Customer or DIGITAL to limit the use of the software to a single Unit transferred by Customer to the third party, to only copy the software, in whole or in part (with the proper inclusion of copyright notice on the software) for use on such Unit and not to provide or otherwise make available the software to any other party. For each copy of the software made by Customer and so provided to a third party, Customer shall pay DIGITAL its then current license fee for such software within thirty (30) days after transfer of the software to such third party. No title to or ownership of the software or any of its parts is hereby transferred to Customer. Notwithstanding the above, use of source software requires execution of a separate Source License Agreement.

6. PATENTS:

If notified promptly in writing of any action (and all prior claims relating to such action) brought against the customer, based on a claim that the customer's use or sale of the product(s) (including software) infringes a United States patent or copyright, DIGITAL will defend such action at its expense and will pay the costs and damages awarded in any such action, provided that DIGITAL shall have sole control of the defense of any such action and all negotiations for its settlement or compromise. In the event that a final injunction shall be obtained against the customer's use of the product(s) by reason of infringement of a United States patent or copyright, or if in DIGITAL's opinion the product(s) is likely to become the subject of a claim or infringement of a United States patent or copyright, DIGITAL will, at its option and at its expense, either procure for the customer the right to continue using the product(s), replace or modify the same so that it becomes noninfringing, or grant the customer a credit for such product(s) as depreciated and accept its return. The depreciation shall be an equal amount per year over the lifetime of the product(s) as established by DIGITAL. DIGITAL shall not have any liability to the customer under any provision of this clause if the infringement, or claim thereof, is based upon (i) the use or sale of the product(s) in combination with other products or devices which are not made by DIGITAL, or (ii) the use of the product(s) in practicing any process, or (iii) the furnishing to the customer of any information, service, or applications assistance. The customer shall hold DIGITAL harmless against any expense, judgement, or loss for infringement of any patents, copyrights, or trademarks which results from DIGITAL's compliance with the customer's designs, specifications, or instructions. No costs or expenses shall be incurred for the account of DIGITAL without the written consent of DIGITAL. In no event shall DIGITAL's total liability to the customer under or as a result of compliance with the provisions of this clause exceed the aggregate sum paid to DIGITAL by the customer for the allegedly infringing product(s).
The foregoing states the entire liability of DIGITAL with respect to infringement of patents and copyrights by the product(s) or any part thereof or by its operation.

7. SUBSTITUTION AND MODIFICATIONS OF SPECIFICATION:

DIGITAL reserves the right, without prior approval from or notice to customer, to make changes to the products (i) which do not effect physical or functional interchangeability or performance at a higher level of assembly or (ii) when required for purposes of safety or (iii) to meet product specifications.

8. GENERAL:

A valid contract binding upon the parties will come into being only as of the time a properly completed and executed Catalog Order Form or written customer acceptance of the catalog Terms and Conditions (such as "Terms and Conditions of Digital's **1-78** Direct Sales Catalog govern this order," written or typed on the purchase order) together with full payment (except for approved current Catalog Open Account Customers), is received by DIGITAL, unless Customer is otherwise notified by DIGITAL within ten (10) days of receipt. The laws of the Commonwealth of Massachusetts shall apply and govern all Catalog Orders. The terms and conditions set forth in Clause 1 through 8 hereof and those set forth on the face of the Catalog Order Form shall apply to all Catalog Orders, notwithstanding any deviations and/or additions by Customer. In no event will DIGITAL be liable for special, indirect, or consequential damages.

COPYRIGHT © 1978 DIGITAL EQUIPMENT CORPORATION

digital SUPPORT SERVICES

DIRECT SALES CATALOG

A wide range of maintenance and customer services are available from DIGITAL to support your DIGITAL hardware. Depending on the type of equipment ordered, you can select an alternative which meets your service needs; from complete DIGITAL maintenance to complete self-maintenance.

There are six service groups which are dedicated to satisfying the post sales service needs of DIGITAL customers. Consult your local yellow pages or call Catalog Sales Desk for nearest location. Support services available through these organizations are:

FIELD SERVICE
This organization provides DIGITAL customers with both on-site and off-site maintenance service through a variety of service products. There are over 300 service locations worldwide with over 5000 service personnel dedicated to servicing DIGITAL equipment.

EDUCATIONAL SERVICES
Through the Educational Services Group, DIGITAL customers can be trained from computer novice to advanced proficiency in software, hardware, and system management. Courses are offered at worldwide locations and at the customer's site.

SOFTWARE SERVICES
Software Services is an organization dedicated to supporting DIGITAL Software by providing software consulting, software maintenance, and software components to DIGITAL customers. Presently there are over 700 Software Specialists located worldwide to assist the customer with his software needs.

CUSTOMER SPARES
Customer Spares is in the business of selling spare parts to customers who wish to perform any level of self-maintenance. Customers in remote locations or with high uptime requirements who use the Field Service organization also benefit from the services offered by this organization. Services offered by Customer Spares, plus educational courses (see above), make it possible for the customer to be successful at self-maintenance.

ON-SITE SERVICE
There are a variety of contractual on-site service programs for terminals and computer systems. Per call service is also provided in which maintenance is provided on a non-contractual time and material basis.

OFF-SITE SERVICE
For the customer not desiring or qualified to receive on-site service, various programs are available for securing factory level repair off-site.

PRODUCT REPAIR CENTERS (PRC)

Centers are established through which a customer may receive fast, low-cost repairs for many off-site service needs. The PRC's offer factory equivalent repairs on a growing list of CPU's, peripherals, and module boards. There are presently 17 PRC's located worldwide. Services presently offered by the Product Repair Centers are:

1. **Major Repair Work** on electro-mechanical devices and CPU's. Customer sends his equipment to a PRC and DIGITAL will repair.
2. **Fixed Quote Repair** — Upon receipt, DIGITAL will inspect equipment, then contact customer with a fixed price for repair. Customer has the option to cancel order for a $60 fee.
3. **Repair of Modules** — Customer can send his modules to the PRC for repair. (This service is available in domestic U.S. via Customer Returns Area (617) 933-8710 x 2280.)

For further information, the customer should contact his local Field Service office for information concerning the repair charges and capabilities of the PRC in his area. See page 161 for locations.

LOGIC MODULE WEIGHT CHART

	MODULE SIZE CODE									
	SSS	SDS	SDD	ESD	EDD	EQS	EQD	ESS	SDT	EDS
Net Weight	3 oz.	6 oz.	4 oz.	8 oz.	8 oz.	12 oz.	16 oz.	6 oz.	20 oz.	9 oz.

Size Code Description (L by H by W)
Length: Standard (S), Extended (E)
Height: Single (S), Double (D), Quad (Q), Hex (H)
Width: Single (S), Double (D), Triple (T)

To calculate the gross shipping weight of your logic module order, locate the module size in the Logic Modules section of this catalog for each of the modules required. Using the Logic Module Weight Chart above, determine the total net weight of the modules. Add 25% (of total net weight) to the net weight to determine the gross weight and round off to the next whole pound. All shipping charges are based on the calculated gross weight. See the following example.

EXAMPLE:

No. Ordered	Cat. No.	Module Size	Net Weight
2	M3020	SSS	6 oz. (3 oz. ea.)
1	M1500	ESS	6 oz.
4	A866	SDS	24 oz. (6 oz. ea.)
			36 oz. (total net weight)

Calculate 25% of total net weight	36 oz. by .25 = 9 oz.
Add to net weight	36 oz. + 9 oz. = 45 oz. (gross weight)
Convert to lbs., 16 oz. = 1 lb.	45 oz. ÷ 16 = 2.81 lbs.
Next whole lb.	2.81 lbs. = 3.0 lbs. shipping weight

CALL: 800-258-1710 (N.H. Residents 603 - 884-6660) 8:30 am to 5 pm EST.

digital
DIRECT SALES CATALOG

DIGITAL'S OTHER PRODUCTS AND SERVICES

Only a portion of DIGITAL's products and services are sold through this Direct Sales Catalog. Your local sales office can provide you with information on our complete product line, which is built around five computer series: The PDP-8, the DECsystem-10 and -20, the PDP-11 and the PDP-15. See listing of sales offices in the United States on page 174.

If you're looking for anything from a small dedicated controller to a large-scale, general-purpose computer, you will find the right system among them.

The PDP-8, introduced in 1965, was first used as a laboratory tool. Today it handles a wide variety of real-time monitoring and control applications. Six central processor models, three minicomputer and four microcomputers, make up the PDP-8 family.

All PDP-8's have as their central element a patented, synchronous data path, the Omnibus, to handle bidirectional communication between system elements. Since each element plugs into the bus through an electrically identical connector, the customer can upgrade the system by simply plugging new devices in. No wiring changes are needed. Many popular interface modules are available through the Direct Sales Catalog.

The PDP-8 customer can choose from more than 600 software programs. These include powerful program development systems like OS/8 and the real-time operating system RTS-8.

The DECsystem-10, introduced in 1967, is a family of large-scale computer systems designed for interactive timesharing, real-time processing, and multiprogramming tasks. A DECsystem-10 can serve multiple users simultaneously under one operating system, with a common user and operating command language.

Any DECsystem-10 can be made more powerful simply by adding more processors, memories, communications systems, and input/output devices. No user software changes are required to expand from the smallest DECsystem-10 to the largest.

All DECsystem-10 central processors can run under the same TOPS-10 operating system, execute the same programs, and utilize most of the same peripherals.

More than 600 DECsystem-10's are now handling a wide range of user applications, including accounting, communications, design and development, education, inventory management, management information, payroll, production control, research, simulation, transaction processing, and typesetting. More service bureaus use DECsystem-10's for timesharing than any other system.

The DECsystem-20 is the bridge machine between the DECsystem-10 and the PDP-8, -11, and -15 Series. Like the DECsystem-10, the DECsystem-20 offers highly reliable virtual memory, a multi-mode operating system (TOPS-20) and a complete range of programming languages and supporting utilities. The end result is an easy-to-learn, easy-to-use interactive system that can still offer all the throughput needed for traditional batch applications.

The PDP-11, introduced in 1970, has brought new technological advances to small, 16-bit computers. The innovations included the UNIBUS, a single, high-speed, bidirectional data bus through which all system elements communicate asynchronously; a hardware stacking capability for rapid processing of structured data; a vectored priority interrupt system for fast, real-time response; and a completely modular organization.

The PDP-11 family shares a common architecture, range of peripherals, and software. The family extends from the LSI-11 microcomputer on the low end to the high-end PDP-11/70, which offers data base management, COBOL programming, and up to four million bytes of main memory.

PDP-11 processors, memories, and peripherals are all designed as plug-in building blocks, simplifying expansion and access for maintenance. New options plug in, without the need for new interfaces. Many popular interface modules are available through the Direct Sales Catalog.

The PDP-15, introduced in 1972, is a family of 18-bit medium-scale computers used in computer-aided design, land use planning, architecture, cartography, stress analysis, construction, medical data bases, shipping, data acquisition and production control.

Hardware features include asynchronous processor operation, a memory processor, single and dual processor configurations and use of programs as large as 128K words.

PDP-15 software includes three operating systems: XVM/DOS for high volume interactive computation, including graphics and dedicated real time applications; XVM/RSX, combining graphics, batch and interactive processing and output spooling with many simultaneous users; and XVM/MUMPS, for timeshared data base management systems with up to 48 on-line users.

DIGITAL supports PDP-15 hardware, software and applications through the Traditional Products organization as detailed below. Refer to local sales office for further details.

The principal marketing groups are listed below, with summaries of their primary interests.

Business Products — Multiuser/multitask interactive systems that can stand alone or serve as parts of a distributed processing network.

Data Communication — Products for message switching, front-end processing, transaction processing, networks, intercomputer communication, reservation file processing, and data concentrating.

Education Systems — CLASSIC and other interactive student systems, computer-assisted and computer-managed teaching, data reduction, business education, and computer science education.

Industrial Products — Systems for programmable control, power management, process control, equipment monitoring, order picking, and inventory control and billing.

Original Equipment Manufacturing — Special packaging and design of computer elements and systems for system builders who resell to end users.

Telephone Data Management — Systems for traffic administration and planning, call addressing analysis, traffic pattern analysis, automatic interception, service order entry, directory assistance, extended testing, revenue collection, maintenance monitoring, billing, message unit recording, and time reporting.

Typesetting — Systems that aid in newswriting, composition, electronic editing and proofreading, automatic justification and hyphenation, classified advertising, accounting, payroll, and circulation.

Laboratory Data Products — Equipment for scientific research, clinical research, pollution monitoring, hospital information systems, radio-isotope study, data acquisition, apparatus control, and data analysis.

Traditional Products — Add-on equipment for current users of DIGITAL products no longer being actively manufactured, and recycled used equipment manufactured by DIGITAL.

DIGITAL EQUIPMENT CORP. / Mail Station MK1-2/E13 / Merrimack, NH 03054

PRODUCT INDEX & PRICE GUIDE

DIRECT SALES CATALOG

The following pages list the more than 800 products available from the Direct Sales Catalog. The Technical Documentation products are listed separately within that catalog section. For your convenience, list, price, catalog price, and cash price has been provided as well as page number next to each item in the index. Products are listed in alpha-numeric sequence according to DIGITAL part number. A general catalog table of contents is given on Page 3 and at the beginning of each catalog section.

PRICING

LIST PRICE — The list price column gives DIGITAL's current corporate list price on each item.

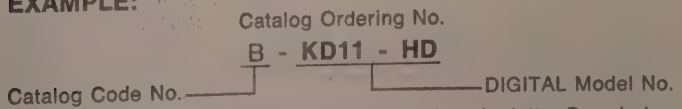
CATALOG PRICE — This price is the price you pay when you order through the Direct Sales Catalog and have DIGITAL invoice you for the requested material. The savings over list price amounts can be quite significant.

CASH PRICE — The cash price is the price you pay for your order when you enclose a check with the order covering full payment. The result is even greater savings.

CATALOG NUMBERS VS MODEL NUMBERS

The Catalog Number of each item listed is structured in the following manner. The BOLD FACE portion of each Catalog Number reflects the official DIGITAL model number for that particular item. The letter preceding the model number is a catalog ordering code and is used as part of the ordering Catalog Number for all catalog purchases. Please use the **entire** Catalog Number for all your purchases. Invoices and packing lists will reflect DIGITAL's model numbers only.

EXAMPLE:



Please use the entire Catalog Number, including the letter B, ordering code to order any item from this catalog.

DIGITAL Equipment Corporation assumes no responsibility for any errors which may appear in this catalog.

Series 6200 Microprocessor Data System...

DYNATECH
μicrosystems
DYNATECH R/D COMPANY
99 ERIE STREET
CAMBRIDGE, MA 02139 U.S.A.
Telephone: 617-868-8050

ıardware **and** software programmable for outstanding versatility in operation...

ın economical system that performs all needed functions:

- acquisition
- monitoring
- controlling
- computing
- processing
- interfacing

ınd, for further flexibility, the microprocessor is ccessible to the user.

Model 6205—

the completely self-contained, intelligent system offering capabilities normally available only with more expensive minicomputers.

- Serial **and** parallel outputs
- Both printer and cassette standard
- Alpha-numeric printer for ease of data interpretation
- Tape cassette usable in a variety of modes:
  —load programs
  —record data
  —retransmit recorded data to printer and/or RS232 or mag tape output
- Analog or digital inputs
- Digital or analog outputs—moderate and high speed ADC's incorporated to handle up to 1000 samples/sec.
- Manual header data entry
- Built-in calendar clock
- Manual or automatic time mode of operation
- Alarm control capability
- Memory expansion capability

Other models in the Series 6200 include:

6200 Microprocessor/Printer Data System
6201 Microprocessor/Cassette Data System
6202 Microprocessor Air Monitoring System

The 1210 Calendar Clock and a variety of other standard modules are available.

Dynatech's easy-to-operate Series 6200 Microprocessor Data System . . . for process control, air pollution monitoring, scientific research, laboratory studies, industrial testing programs . . . wherever reliable data monitoring and control is required.

GNT AUTOMATIC INC.

VALUE ENGINEERED PAPER TAPE EQUIPMENT

PUNCHES

- 70 characters per second
- Paper and any Mylar® Tape
- 5, 6, 7, or 8 channels, ISO or TTS
- Positive tape control
- Long life punch block standard, 1000 rolls
- Accurate registration
- OEM mechanisms available
- Desk top model (GNT 3424) available

GNT 3406
Stand Alone or Rack Mounting

READERS

- Speeds available to 1500 characters per second
- Bidirectional models available
- Available with or without interface
- Extremely low tape wear
- Up to 80% tape transparency
- OEM mechanisms available

GNT 27
Award Winning Design

READER/PUNCH COMBOS

- Connects to any 300 or 600 baud teleprinter, terminal, computer port via RS232
- Built-in duplicator
- Proven paper or Mylar punch
- Reader capable of loading up to 4800 baud

GNT 42

GNT is a leading OEM producer of paper and Mylar tape equipment; the company has a worldwide sales and service organization. The illustrated products are a sample of a line which ranges from OEM mechanisms to computer systems. Call or write for additional information.

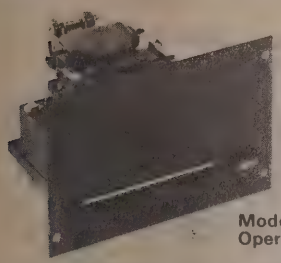
CARD AND BADGE READERS FOR SEVERE INDUSTRIAL ENVIRONMENTS

MODELS AND OPTIONS FOR EASY SYSTEM DESIGN



Model 264A-02 Remote Operation Badge Reader

OEM AND QUANTITY DISCOUNTS AVAILABLE

Model 960A Card Reader with Model 80 Scanner

BADGE READERS

odel 264A, Manual operation, will read standard 22 olumn CR 60 plastic badge (Type III) with Media I lollerith) punching $279.00

lodel 264A-01, Electric (115 VAC) operation, for stand- d CR 60 badge $319.00

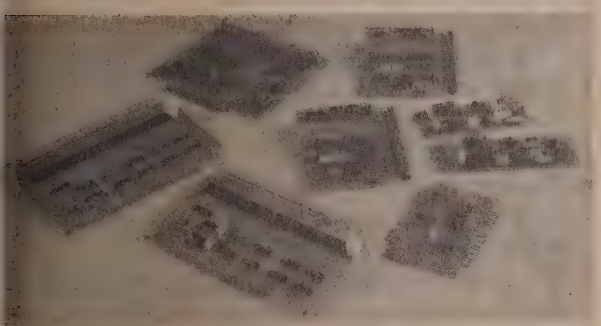
lodel 264A-02, Electric (115 VAC) operation, for stand- d CR 60 badge or thin plastic or paper card $359.00

lodel 264A-04, Electric (115 VAC) operation, for thin astic or paper 22 column card or first 22 columns of andard 80 column card $379.00

STATIC CARD READERS

Model 960A, Electric operation (115 VAC with TTL compatible control), will read standard 80 column tab card with Media I (Hollerith) punching $998.00

OPTIONS



or easy system design — card or badge readers.

hoice of output bussing combinations with diode isolation atrices is available to allow column multiplexing and reduce xternal wiring.

TL-compatible electronic scanners provide all circuitry for ? row output in parallel, column serial. The Model 22 Scanner, r the 264A Series readers, and the Model 80 Scanner, for the 60A reader, translate the punched card data into TTL-com- atible interfaces.

CD outputs, either character serial from the scanners, or rect parallel up to 22 digits, can be provided by direct Hol- rith to BCD conversion.

ollerith to ASCII converters convert the 12 bit TTL data from e scanners to 8 bit ASCII code.

TL compatible control of 115 VAC operation allows easy con- ol of reader operation by system.

TECHNICAL ASSISTANCE

ur staff is experienced in virtually all card and badge reader pplications. Call today and put our 18 years of card and badge ader experience to work for you.

APPLICATIONS

Factory Data Collection Systems
Programmable Controller Inputs
Microprocessor System Data Input
Remote Data Entry Terminals
Process Controllers
Automated Storage/Retrieval Systems
Security/I.D. Systems
Replace Banks of Thumbwheels

ADVANTAGES

Static Operation • All contacts are made simultaneously — card or badge can be re-read without operator action. Multiple columns can be outputed in parallel.

Captive Action • Card or badge is held in reader until released by system.

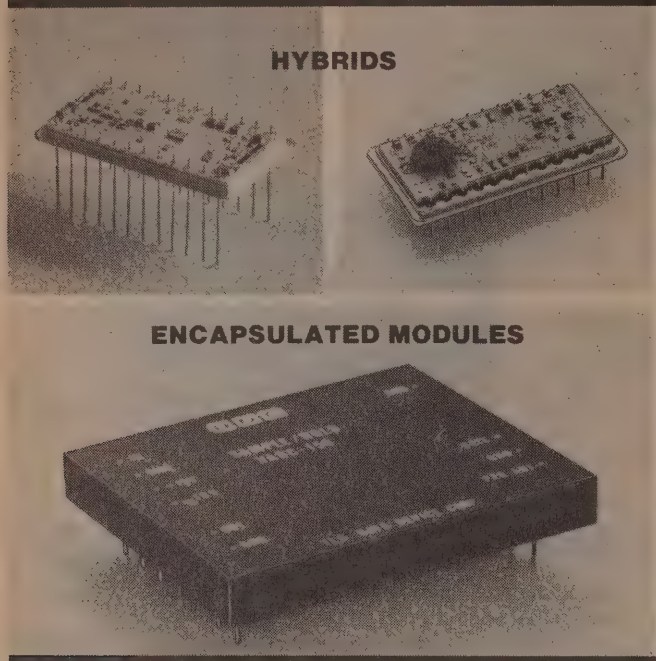
Reliable Brush Design • Nominally 5- minimum of 3- contacts per hole assures reliable read time after time in spite of contaminants and card misalignment.
• Brushes protected against warped and mutilated cards.

Cost Effective • Predesigned building block system components tailor the reader to your needs.
• Low-cost basic readers.

Delivery • Typically 30 days — we will do our best to meet your needs.

DDC Data Conversion Products

A/D and D/A Converters; S/H and T/H Amplifiers; Data Acquisition System



High Accuracy and High Speed State-of-the-Art Products manufactured in quantity to MIL Specs

A/D Converters

- Accuracy and resolution to 15 bits
- Conversion rates to 20 MHz
- S/H or T/H input
- Internal or external clock and reference

D/A Converters

- Resolution 10 to 15 bits
- Linearity error to ± 0.003% F.S.R.
- Settling times to 15 ns
- Pin-programmable voltage and current output ranges
- Fixed reference or four quadrant multiplying
- Low glitch and deglitched

S/H and T/H Amplifiers

- Acquisition times to 25 ns
- Aperture uncertainty to 60 ps
- Linearity error to 0.0125% F.S.R.
- Small signal bandwidth to 100 MHz

Related Products

- Custom hybrids
- Custom data acquisition and processing systems
- SEM packages qualified as JAN modules

Synchro Data Conversion

- S/D and D/S converters
- Multiplexed and multispeed
- Synchro instruments
- Industrial synchro products

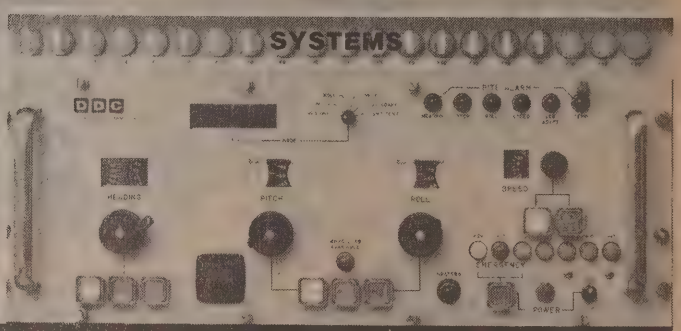
INSTRUMENTS

SYSTEMS



A complete line of Synchro Products manufactured in quantity to MIL Specs from the Leader in Synchro Conversion and Pioneer in Hybrid Designs

S/D & R/D Tracking Converters

Resolution to 16 bits or 3½ decades BCD
Accuracy to ± 1 minute (single speed)
All standard synchro and resolver formats
Transformer isolation or solid state input
Tracking rates to 100 rps
Multispeed
Multiplexed with accuracies to ± 5.4 minutes

D/S & D/R Converters

Resolution to 16 bits
Accuracy to ± 1.0 minutes
Synchro or resolver output
High power output for torque receiver loads

Synchro Instruments

Programmable BCD angle indicators with resolution to ± 0.001°
Programmable multispeed angle indicators
Custom scale factor shaft angle encoders
Angle simulators with accuracies to ± 0,01°

Other Synchro Products

- Solid state control transformers
- Solid state control differential transmitters
- Synchro/resolver to linear DC converters
- Synchro/resolver to sine/cos DC converters
- Inductosyn to digital converters
- Industrial resolver to digital encoder
- Electronic shaft angle limit switch

Related Products

- Custom hybrids
- Custom synchro interface and retransmission systems
- SEM packages qualified as JAN modules.

Other Data Conversion Products

- A/D and D/A converters
- S/H and T/H amplifiers
- Custom data acquisition and processing systems.

Whatever your hard-copy need — alpha-numeric/ igital printout; multi-copy; multi-color; ordinary alculator paper/pressure-sensitive tape; card, label, an folded forms, sales slip — one of our basic field- roven drum impact printers or our new generation of)ot Matrix printers can suit you perfectly.

Products of Shinshu-Seiki (trade name Epson), world-famous for a decade of reliability. Choose Drum Impact Printer with 21 columns, 42 characters/ column, 2.8 lines/sec. printing speed, or 40 columns with Dot Matrix flexibility. Lowest sample prices. Phone Floyd Makstein, VP/Marketing, or write:

PANEL DISPLAYS

MAINFRAME SUBSYSTEMS

MAINFRAMES are integrated modular subsystems optimized by the selection of functions, resolutions, and speeds for the specifics of each application. Typical groups are outlined below. Contact IEI for additional information.

ANGLE DISPLAYS: The DD135 series accepts, converts, displays, and delivers angles in a variety of forms including binary, BCD, synchro resolver, dual speed, mils, degrees, arc-minutes and seconds and distance in any unit of linear measure at resolutions to 21 bits and accuracies to ±.0003°. Options include bipolar operation and programmable offsets and scaling factors.

SYNCHRO INTERFACES: Multichannel synchro to digital and digital to synchro interfaces accommodating mix of channels, synchro levels, references, and speed ratios, various display and BITE options.

PRECISION COORDINATE CONVERTERS: Polar, spherical, and rectangular coordinate conversion and translation units employing non-volatile hardware math and trig and providing angle and vector resolutions to 18 bits.

STABILIZATION COMPUTERS: ROM programmed microcomputer controllers which accept vehicle, object, and inertial position data, compute true pointing angle, and generate the command signals required to maintain true pointing. Units feature signed 16 bit floating point precision, computing speed, and dynamic accuracy.

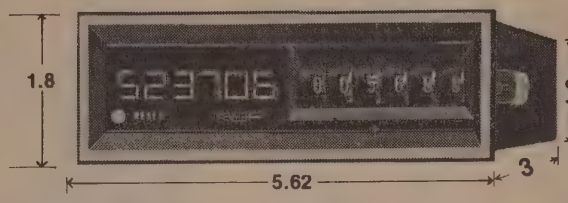
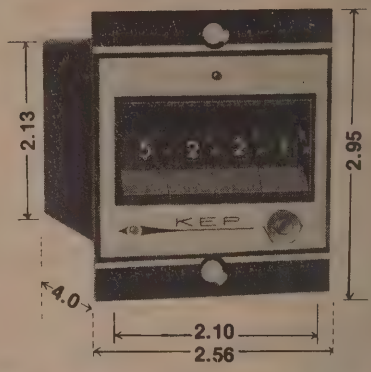
ELECTRONIC PREDETERMINING COUNTERS



SCP-16



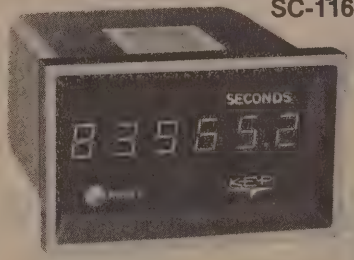
EL-4

With or without visual display. Up to 6 digits of preset. Built in 110 VAC power supply. Counts up to preset number or down from the preset number. Multiple presets available. Crystal time bases. Paralell BCD output. Current available to power all KEP input devices. In stock.

TACHOMETERS, TOTALIZERS, TIMERS ADD/SUBTRACT COUNTERS

The SC Series — for high speeds, BCD output, memory, battery standby circuitry, a .400 display, and built in power supply. The series that is ideal for totalizing events, recording precise elasped time, monitoring rate, comparing speeds of two variables, adding and subtracting, or monitoring position.

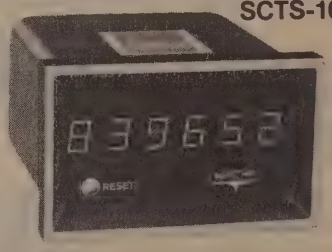
SC-116



TOTALIZER /ADD SUBTRACT

BCD • 10 megahertz • c/MOS • 110 VAC Supply • Phase Discrimination • Small Handsome Aluminum Case • High Noise Immunity • Low Price • In stock

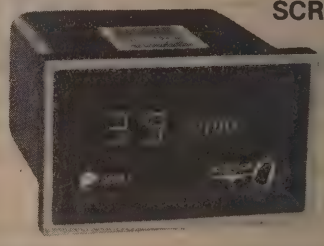
SCTS-16



TIMERS

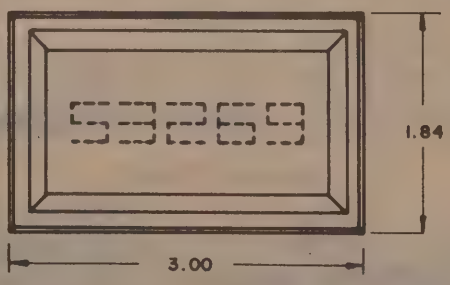
Line Controlled • Crystal Controlled • Any Resolution to milliseconds • BCD • Splits • Taylor • Built in 110 VAC Power Supply • C/MOS • 4 Digits • Low Cost • In Stock

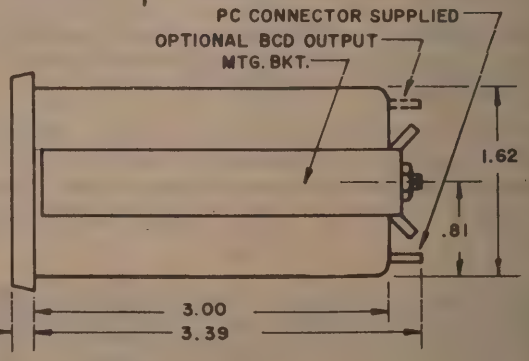
SCR-12



RATE METER/TACHOMETER

4 Digits or fewer • Pulsed by KEP Inputs • Updates once per second • No display change without rate change • 110 VAC Supply Built In • Various Mounting Styles • BCD Output





See Product Section 2200

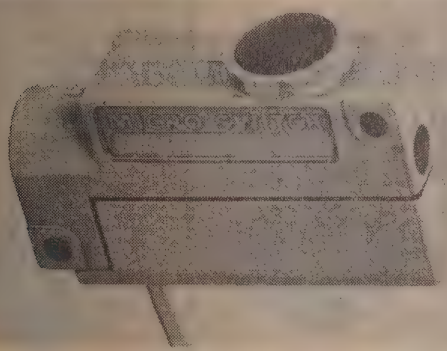
RETRO REFLECTIVE INFRA-RED PHOTOELECTRICS



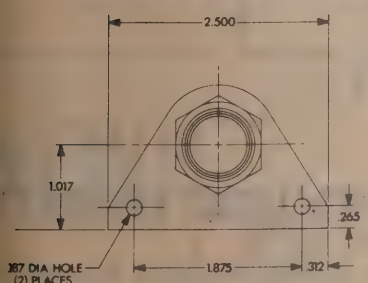
FEMLS-7A • Retro-Reflective • Cast Aluminum • Water Tight • 15 Foot Scan

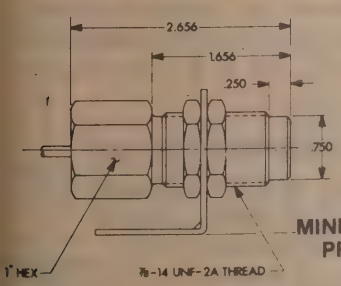
These photo electric eyes use a solid state infra red LED light source to eliminate interference from ambient light and provide virtually unlimited light source life. The LED (light emitting diode) replaces the usual incandescent bulb which is fragile and of limited life.

The light beam is aimed across the path of the item to be counted to a reflector which directs the beam back to a sensor built into the photo head. The count is triggered when the beam is broken. Many variations are available.

These photo heads may be directly connected to any KEP counter.

TOTALLY SOLID STATE PROXIMITY SENSOR





Non-Contact Integral Sensor/Control

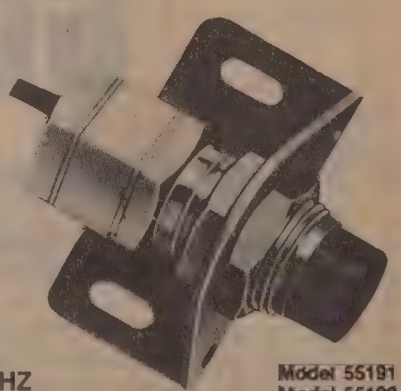
Detects All Metals — Features Extremely Compact Size For Dense Packaging Applications

All Solid State Design and Sealed Construction Insures Improved Reliability — Greater Stability — Longer Life

Two Models Available — 12VDC with Digital Output and 24VDC for Solid State Switching of Relays and Counters

Typical Sensing Range of 0.250"

Broad Frequency Response of 0-10K HZ for Wide Variety of Applications



Model 55191
Model 55192

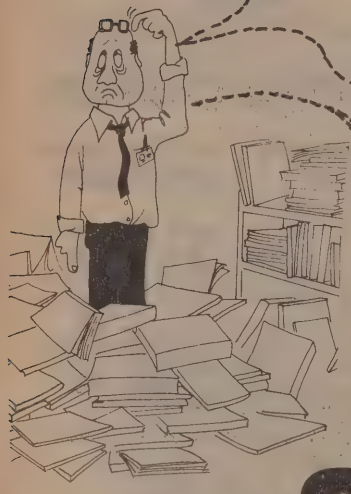
What can I use to keep all the manufacturers' product data I receive in order?

What system makes filing or retrieving manufacturers' catalogs fast and easy?



Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

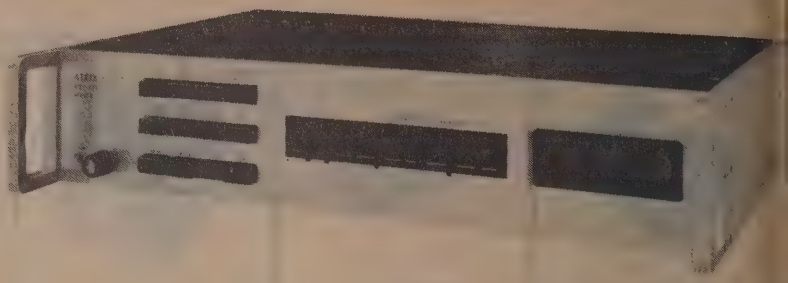
Thermocouple and General Instrumentation Scanners

General Instrumentation
MODEL 1701 SCANNER

- **Random access. Channels controlled by a BCD input to allow programming by external source such as computer.**
- **Sequential scanning with end point selection by front panel digital switches.**



GENERAL: The BCD input is compatible with standard TTL logic. The unit contains BCD output for use on auxiliary equipment. Switches are available in multiples of 10 up to 100 channels in a 3½" cabinet.

CAPACITY: 10 to 100 channels are available in the 3½" master. Slave units with 10 to 200 channels in 3½" cabinets allow expansion to 1000 channels.

SCAN RATE: The scan rate may be as fast as 5 msecs.

INPUT: 1. Level — Standard BCD TTL logic. True equals +5 volts and false equals 0 to +0.5 volts. Unused inputs must have a false level or be terminated in 500 ohms max. 2. BCD enable — A false signal must be applied to enable the input data.

CHANNEL READOUT: Neon numerical indicator lights are provided for a visual indication of the channel selected.

CONTACT RATINGS: 500 volts maximum between conductor and chassis, 350 volts maximum between conductors. Current should not exceed 100 ma for maximum life.

OPTIONS:

A. Manual Digital Switch — The switch can manually select any desired channel from the front panel.

B. Sequential Scan — 1. Advance: Application of a true level will cause the scanner to advance one channel. 2. Reset: Application of a true level will hold the scanner in reset (000) position until true level is removed. Short or open circuit is "false." Positive 5V is true. Input impedance is 10K ohms. 3. Stop or Ctr. Disable: Application of a true level will disenable the advance input or stop any external clock inputs. A false level is required to allow sequential scanning.

C. Sequential Scan with End Point Selection — Two digital switches are provided on the front panel to manually select the start and the stop channel for sequential scanning.

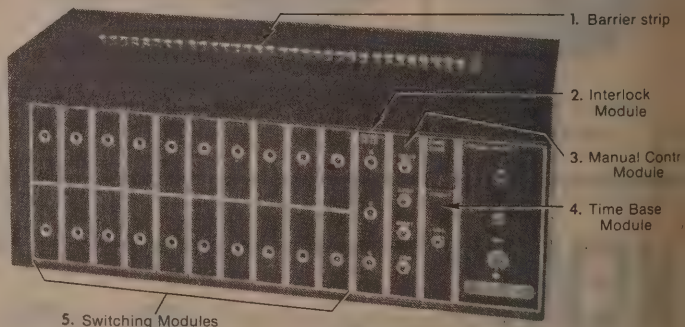
D. Int. Clock — 1. Rate: Continuously variable from .01 to 10 seconds per channel. 2. Single/Recycle: A front panel switch allows a single scan of all switches or continuous scanning of all switches. 3. Internal/External: Front panel switch selects the internal clock or an external clock input. 4. Start Input: Application of true level at the start input will initiate a scan of all switches only when the scanner is in the 000 condition.

DIMENSIONS: 3½" high x 17" wide x 10" deep.

LITERATURE: Write for Bulletin RS-71.

Quantachron V Timer-Programmer

A solid state "cam" timer-programmer with plug-in modules for easier maintenance and less down time.



Field proven • All solid state high level logic • Triac output switching • Up to 20 channels per unit • Programmed by digital switches • Easy to maintain • Plug-in modules • Select only the number of channels and functions needed • Rack mounted, bench mount or enclosure mount • Digital display of count • Manual or remote control • Dimensions 16" wide x 6¾" high x 6" deep.

1. Barrier Strip: All input, output and control functions connect to easily accessible barrier strip. All connections electrically isolated from digital logic.

2. Interlock Module: This module is optional. It allows four independent external contacts normally open to interrupt the count sequence and prevent an actuation of four ouput channels until the interlock is re-established.

3. Manual Control Module: Start, stop, reset and jog.

4. Time Base Module: Generates 100 counts for the time base selected. Time base can be adjusted from 0.5 to 1000 seconds.

5. Switching Modules: From two to 20 channels. Two channels per module. This module receives the count code generated by the time base module and compares it to the "Activate" and "Release" code programmed by the digital switches. Each module has two independent channels. Programming is done by setting the digital switches (by thumb or screwdriver) to the desired actuate and release times.

NEED A *MEDIUM* OR *HIGH RESOLUTION* ENCODER? OR A *MILITARY* ENCODER OF *ANY* RESOLUTION?

Itek can deliver! Check out the *Absolute* and *Incremental* shaft-angle encoders listed in the table below. They're designed and manufactured to *exacting* quality assurance standards to ensure very long and very dependable performance! Stock and custom displays are available to operate with any Itek encoder. ■ Individual data sheets of any Itek encoder or display are immediately available on request. ■ Modifications to your specific encoder requirements can be accommodated.

Absolute Digisec RA series

Features: • Parallel whole word unambiguous out • TTL/DTL compatible • Resolution to 0.31 arc-seconds (22 bits) • Highest accuracies available anywhere • Operating temperature −40° to +71°C • Military Specification rated • Instant on-the-fly readout • LED light sources • Separate Electronics—no electronics in optical unit (thru-hole systems)

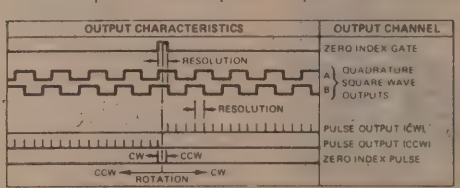
Available Options: • Serial readout • Line driver output • Redundancy • Chrome slit and disc (standard on size 23 and size 158) • Binary lamp display • Subtractor card for electronic zeroing

Detailed Data Sheets are available on request Specifications subject to change without notice

Incremental Digisec RI series

Features: • Quadrature square wave or pulse output, zero index • TTL/DTL compatible • Resolution to 0.31 arc-second (22 bits) • Self-contained electronics • Operating temperature −40° to +71°C • Military Specification rated • LED light sources

Available Options: • Line driver output • Pigtail cable • Square wave or pulse output



Environmental Ratings. All DIGISEC® encoders are designed to meet rigid military specifications. The following environmental specifications are typical.

Temperature: −40° to +71°C	Vibration: 10g
Humidity: 0 to 95%	Shock: 50g, 11 milliseconds

- INSTRUMENTATION AMPLIFIERS

DATA ACQUISITION SYSTEMS

System 620 is a complete line of field-proven computer controlled data acquisition products — providing all functions from signal conditioning to computer interface. Each product reflects Neff's high standards of accuracy, versatility and reliability...

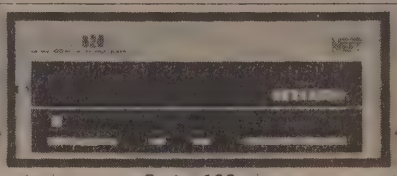
SERIES 100 AMPLIFIER PER CHANNEL SYSTEM. The top of the System 620 family of data acquisition products, the amplifier-per-channel Series 100 offers performance unmatched by any other data acquisition technique. High signal source isolation plus a differential amplifier with guard shield, high-level active filter and FET multiplexer switches **for each channel** provide low noise, 50 kHz throughput rate, 0.01% accuracy and 120dB common mode rejection.

Series 100 offers a choice of four types of differential input amplifiers with plug-in modules for gain and bandwidth selection on each channel. A programmable gain amplifier with gain of 1 through 40 increases the dynamic range of the system under program control. The system is available with a 12-, 14- or 15-bit ADC. Up to 64 channels mount in a single 7 x 19-inch (H x W) enclosure; it is expandable up to 256 channels.

SERIES 200 AMPLIFIER PER CHANNEL SYSTEM. Series 200 is identical to the Series 100 system, but is expandable to 2048 channels.

SERIES 300 SIGNAL CONDITIONER. A subsystem that conditions the output of signal transducers to be compatible with analog measuring systems, the System 300 contains an excitation power supply for each channel providing either constant voltage or constant current excitation. It also has bridge completion circuits and calibration for up to 64 channels per enclosure. Plug-in mode cards configure each channel for operation with a particular type of transducer.

SERIES 400 DIFFERENTIAL MULTIPLEXER. The Series 400, by virtue of its fully guarded differential inputs, provides performance unmatched by systems of its type. An input guard shield, surrounding sensitive input circuits, is driven by the common mode component of the input signal. This achieves 120dB rejection without switching individual guard shields and allows the system to operate from either grounded or floating inputs without degradation.



Series 100

An input filter on each channel rejects superimposed noise and unwanted signal frequencies. CMOS/FET multiplexer switches provide high isolation and allow throughput rates to 10kHz. The system's programmable gain amplifier provides program-controlled input sensitivity from 5mv to 10 volts. Accuracy is enhanced by an automatic zero circuit that compensates for internal drift. Series 400 is available with a 12- or 14-bit ADC. Up to 256 channels are accommodated in one enclosure; the system is expandable to 2048 channels.

COMPUTER INTERFACE. Standard interfaces to most commonly used minicomputers are available. Both Programmed I/O and DMA data transfer are offered.

SERIAL DATA LINK. The Serial Data Link provides asynchronous serial transmission over two coaxial cables between the controlling computer and up to eight System 620's located at remote test sites. It permits data acquisition and encoding at the individual test sites — reducing analog cabling requirements.

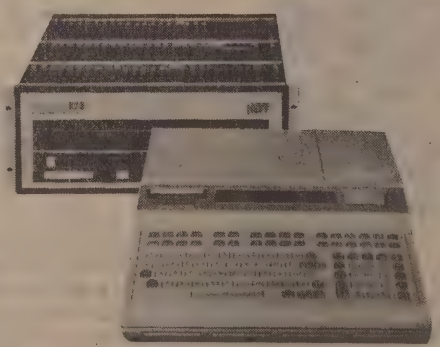
A serial data transmitter accepts 16-bit parallel computer words and converts them to serial form. Transmissions to and from the remote sites are in the form of a 20-bit pulse train. All transmitted and received data is checked for parity and pulse count — both on a per-word and data block basis. An error flag is set if errors are detected. Separate 16-bit parallel data output and status words are returned to the computer.

SYSTEM 620S "TURN-KEY" SYSTEM

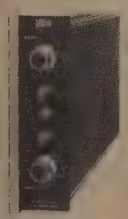
The "Turn-Key" System 620S consists of either the Series 100 or Series 400 system interfaced to the Hewlett-Packard Model 9825A Desk Top Calculator, used for system control, data storage and processing. The 9825A's speed, computational capability and fast semiconductor memory provide the system control and data processing power of a minicomputer while retaining the operating convenience of a calculator.

The system is supplied with standard data acquisition programs. A built-in, two-track tape cassette drive is used to load programs and record data. Its easy-to-learn high-level programming language was designed especially for technical personnel having little or no programming experience.

A variety of high-speed I/O techniques including DMA, buffered I/O and fast read/write with vectored interrupt capability can be utilized. A 16-bit parallel hardware interface provides data transfer rates to 43,000 samples per second in DMA mode with the Series 100 system and up to 9800 samples per second with Series 400.



INSTRUMENTATION AMPLIFIERS



Neff offers a complete line of differential instrumentation amplifiers for laboratory, industrial and aerospace applications. Neff amplifiers feature gains of 1 to 2500, accuracy of 0.01%, 120dB CMR, switch selectable filter, simultaneous narrowband and wideband outputs, integral power supplies and separate input and output zero controls.

Models are available with 300V common mode, programmable gain, galvanometer output and fullscale zero offset capability. A single-channel case is available as well as 8-channel or 16-channel rack mounting enclosures.

AC and Synchro Instrumentation

If you're into AC Instrumentation or ATE, then you've probably worked with our high-accuracy, high-reliability instrumentation . . . or wanted to! We are the innovators of equipment and modules based on an industry-first usage of LSI that resulted in performance parameters unmatched by competitive products.

All North Atlantic equipment reflects the highest state-of-the-art technology. Each product we produce goes through extensive testing including burn-in at a 100% level.

Now! LSI in Synchro Converter modules!

Founded on our leadership in AC Instrumentation is our innovative line of data conversion modules. Making use of advanced LSI technology, all receive the same, intensive quality-control tests as our instruments including burn-in. If you're into data conversion, your logical next step should be to learn about our LSI-enhanced modules.

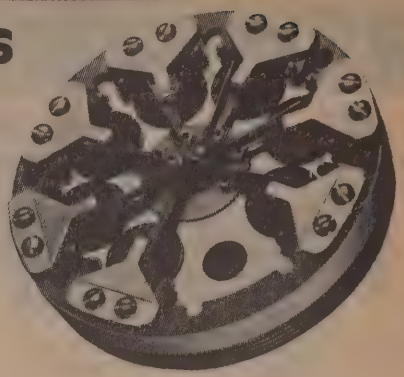
Today's Most Advanced Printers Aren't Just Different At Heart...

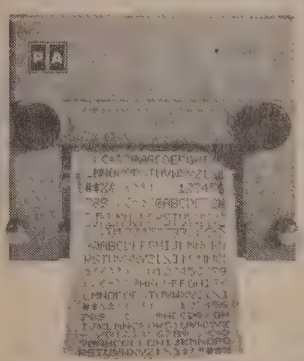


All Matri-Dot printers start with this difference: a unique dot matrix print head that outperforms all others . . . smaller in size, high (150cps) speed, longer needle stroke for crisper multiple copy printing, and lower power consumption. 7 x 5 dot matrix characters provide full alphanumerics with a complete ASCII 63-character set — perfect head start for a full capability family!

They're Far Ranging In Capabilities

DMTP-3
Smallest Data/Text Printing Mini

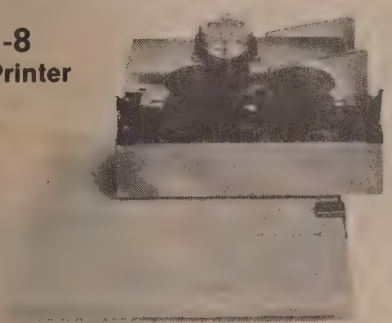
Smallest 20-column alphanumeric impact printer available, it's just 3"H x 3½"W x 7"D for single copy printing, 9" deep for multiples. Prints both "first line up" text or "first line down" data print formats . . . even prints enhanced letters. Drop-in ink platen prints 75,000 lines without messy ribbons, ink reservoirs or costly special papers. Request Bulletin 904.



DMTP-6
Microprocessor-Compatible Printer

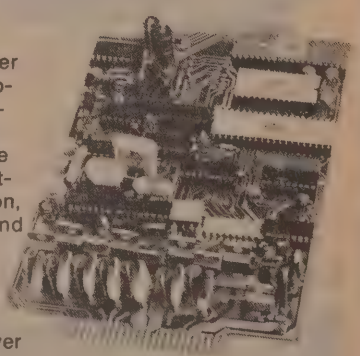
Available in 80-96 column widths, this uniquely versatile tape printer turns out both text and data at 110 cps. It prints from 1-4 copies without adjustment, using ordinary adding machine paper, impact-sensitive paper, even fan-fold forms and labels. Easily replaceable ink rollers combine with self-reversing ribbon for 10-million-character life. Request Bulletin 911.

DMTP-8
Forms Printer



Three open sides allow easy insertion of receiving forms, invoice forms, virtually any size documents. Prints up to 48 characters and any number of lines; accepts form sets form 3 to 15 mils thick — typically an original and four copies. Adapts for varying applications with choice of straight-through feed, or bidirectional feed and ejection. Request Bulletin 914.

uP 7-2
Microprocessor Controller



Control any DMTP Series Matri-Dot printer with this internally programmable option. Interfaced between the printer and the outside world, it provides built-in character generation, diagnostic routines, and a choice of such logic functions as ASCII, RS-232C/I-Loop and selectable baud rates from 110 to 1200. Power supply and mating harness also available. Request Bulletin 921.

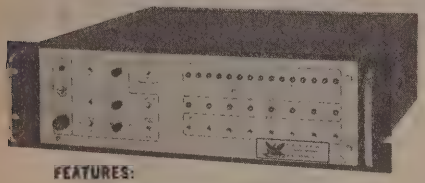
PDI® Analog Data Acquisition Subsystems

6000 SERIES High Level Analog Data Acquisition Systems



Units in the 6000 Series are highly flexible instruments, with many options, that can be matched exactly to the capabilities and characteristics of the control unit or data storage device. Within the 6000 Series there are three subgroups. The subgroups feature high speed, high temperature stability, and low cost. All three groups offer resolution from 8 to 15 binary bits and will accommodate up to 256 single ended or 128 differential inputs in a single chassis. These features combined with single channel, random and sequential address capabilities make the 6000 Series easily adaptable to your system requirements without the need for costly custom engineering. The system comes complete with all necessary power supplies for its operation and requires only 110V AC line power.

FEATURES:

- Multiplexed Thruput Rates to 1MHz
- Temperature Compensation to 10 ppm
- Versatile optional Manual Controls and Indicators
- Choice of Standard Input Voltage Range Options
- Field Expandable to 256 Channels (S.E.)
- Differential or Single Ended Input
- Resolution to 15 Bits
- Input Overvoltage Protection to ±30 Volts
- System Accuracies to 0.01%

3 SUB-SERIES

6900 - Highest Speed

The 6900 group provides the highest thruput rate in the 6000 Series. Resolution of 8 to 15 binary bits is available with multiplexing rates to 1 MHz for an 8 bit model, 400 KHz for a 12 bit model and 220 KHz for a 15 bit model. The 6900 system was designed primarily for applications where the analog input bandwidths are high. Base price: $3,344.00.

Model No.	6908	6910	6912	6913	6914	6915	Notes
No. of Bits (Binary)	8	10	12	13	14	15	
Resolution (1 Part in)	255	1,023	4,095	8,191	16,383	32,767	
Thruput Rate (KHz)	1000	800	400	250	220	220	(1)
Thruput Error (% FSR @ 25°C)	0.4	0.15	0.05	0.03	0.02	0.01	(2)
Input Ranges (STD)	A,B	A,B	A,B,C,D,E	A,B,C,D,E	B,C,D,E	B,C,D,E	(3)

General 6900 Specifications
System T.C.: 0.003% FSR/°C
Aperture Delay: 10 nanoseconds
Aperture Uncertainty: 1 nanosecond

Notes:
(1) Thruput rate for sequential mode or random mode when address is supplied one channel ahead.
(2) Accuracy specification includes all error sources and the quantizing error of ±½ LSB.
(3) Input ranges: A=0 to +5V; B=±5V; C=0 to 10V; D=±10V; E=±10.24V

6700 - Highest Stability

The 6700 group provides the highest thermal stability of the 6000 Series. The overall system temperature coefficient is less than 0.001% FSR/°C or 10PPM. This system was designed specifically for applications where wide temperature variations might be encountered and high accuracy must be maintained. Base price: $2,542.00.

Model No.	6708	6710	6712	6713	6714	6715	Notes
No. of Bits (Binary)	8	10	12	13	14	15	
Resolution (1 part in)	255	1,023	4,095	8,191	16,383	32,767	
Thruput Rate (KHz)	110	90	65	60	20	20	(1)
Thruput Error (% FSR @ 25°C)	0.4	0.1	0.025	0.015	0.01	0.01	(2)
Input Ranges (STD)			A,B,C,D,E			B,C,D,E	(3)

General 6700 Specifications
System T.C.: 0.001% FSR/°C
Aperture Delay: 10 nanoseconds
Aperture Uncertainty: 1 nanosecond

Notes:
(1) Thruput rate for sequential or random mode
(2) Accuracy specification includes all error sources and the quantizing error of ±½ LSB
(3) Input ranges: A=0 to +5V; B=±5V; C=0 to 10V; D=±10V; E=±10.24V

6400 - Lowest Cost

The 6400 offers an attractive compromise between thruput rate, temperature stability, and cost. While the lowest priced group in the 6000 Series, it offers moderate thruput rates and thermal stability. The 6400 group was designed for applications where low cost is a major consideration along with reasonably high performance. Base price: $2,091.00.

Model No.	6408	6410	6412	6413	6414	6415	Notes
Number of Bits (Binary)	8	10	12	13	14	15	
Resolution (1 part in)	255	1,023	4,095	8,191	16,383	32,767	
Thruput rate (KHz)	70	65	50	25	10	4	(1)
Thruput Error (% FSR @ 25°C)	0.4	0.1	0.025	0.015	0.01	0.01	(2)
Input Ranges (STD)			A,B,C,D,E			B,C,D,E	(3)

General 6400 Specifications
System T.C.: 0.002% FSR/°C
Aperture Delay: 50 nanoseconds
Aperture Uncertainty: 10 nanoseconds

Notes:
(1) Thruput rate for sequential or random mode
(2) Accuracy specification includes all error sources and the quantizing error of ±½ LSB
(3) Input Ranges: A=0 to +5V; B=±5V; C=0 to 10V; D=±10V; E=±10.24V

7000 SERIES • Automatic/Programmable Gain Ranging

The 7000 Series offers a unique solution to high speed analog to digital conversion where the input amplitude cannot be predicted in advance of the conversion. Utilizing a high speed, fast settling multi-range amplifier the 7000 Series can switch channels, determine the gain range, and perform a 14 bit A to D conversion in less than 20 microseconds. Five models with thruput rates from 10 KHz to 50 KHz are available. In the Autoranging mode a 14 bit data word is combined with 2 bits of range data for a 16 bit output word. A single chassis will accommodate from 8 to 128 differential channels. Base price: $6,367.00.

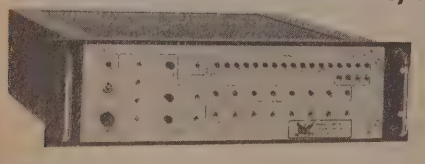
Model No.		7115	7215	7315	7415	7515	Notes
Thruput Rate (KHz)		10	20	30	40	50	
Thruput Error (% FSR @ 25°C)							(1)
Full Scale	±10.0	0.01	0.01	0.01	0.01	0.01	
Input	±1.0	0.015	0.02	0.025	0.03	0.035	
Range (Volts)	±0.1	0.02	0.025	0.03	0.04	0.05	

Features:
- Resolution to 15 bits
- Thruput Accuracy to .01%
- Auto or Programmable Gain Ranging
- Four Customer Selected Gain Ranges from 0.1 to 10.0 Volts
- Multiplexed Thruput Rates to 50 KHz

General 7000 Specifications
Input Ranges (Customer Selectable): Any four from ±0.1 to ±10.0 Volts
Input Impedance: 100 megohms (ON or OFF)
CMRR (DC to 60 Hz with 350 ohms source unbalance)
Gain Level: 1 = 80 db; 10 = 100 db; 100 = 120 db
Common Mode and Normal Mode Voltage: ±11 Volts.
Cross Talk Rejection (DC to 1 KHz with 350 ohms source unbalance)
Thruput Rate (KHz): 10 = 110 db; 20 = 104 db; 30 = 98 db; 40 = 92 db; 50 = 86 db
Gain Range Change: 90% of full scale
Thruput T.C.: 0.002% FSR±3 μ volts RTI/°C

Notes:
(1) Thruput error includes all error sources and ±½ LSB in automatic mode. Error is slightly less in programmed mode.

8000 SERIES • Automatic/Programmable Gains to 1024



The 8000 Series features adaptability to almost any input signal currently in use. The system offers automatic or programmed gain selection with 11 binary ranges from ±10 millivolts to ±10.24 volts full scale. In the automatic ranging mode the gain ranges effectively provide the system with a binary floating point capability. The data word (12 binary bits) is combined with the range data (4 binary bits) for a 16 bit output word. The 8000 System will resolve input changes at 5 microvolts on the ±10 millivolt range for an overall analog dynamic range of 132 db. Base price: $4,438.00.

Gain Ranges: 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024
Input Ranges: ±10.24, 5.12, 2.56, 1.28, 0.64, 0.32, 0.16, 0.08, 0.04, 0.02, 0.01 Volts
Thruput Error: Less than .05% of the reading on any input over 5 millivolts @ 25°C
Differential CMRR (DC to 60 Hz): 80 db at unity gain and increasing to 120 db at a gain of 1024 with 350 ohms source unbalance
Common Mode and Normal Mode Voltage: ±11 Volts.
Prices subject to change without notice.

Aperture Time: 50 nanoseconds
System T.C.: 0.001% FSR±1 μ volt RTI/°C
Crosstalk Rejection: Minimum of 100 db, DC to 60 Hz
Input Impedance: 100 megohms (ON or OFF)
Thruput Rates:
Automatic Gain Ranging Mode
Single Channel ..... 2.5 KHz
Multiplexed Input ..... 1.0 KHz
Programmed Gain Mode
Fixed Gain, Single Channel ..... 20 KHz
Gain and Channel Switching ..... 1.8 KHz

Features
- Resolution of 12 Bits
- 11 Binary Gain Ranges
- ±10 mv to ±10.24V Input Ranges
- Thruput Rates to 20 KHz
- Auto or Programmable Gains
- System Accuracy of 0.05% of Reading

Subsystem computer interfaces available. Contact factory for quotation.

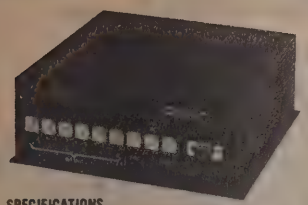
PDI High Speed Analog to Digital Converters



MODEL ADC1106-100
A/D CONVERTER COMBINES
High Speed with
(100 million conversions per second)
Exceptional Accuracy
(±0.75%±½LSB)

SPEEDS to 100 MHz

Phoenix Data's new very-high-speed (100 million conversions per second) analog to digital converter is designed to digitize ultra-high-speed analog input signals — including high-speed display and radar signal digitized input — with accuracy of ±0.75%±½LSB.

The new ADC1106-100 also has a resolution of 6-bit binary or 2's complement with a ±2 volt input range. A "system-ready" module only 8"x 8"x 3", it is totally self-contained and incorporates all of the functions necessary to perform 6-bit binary conversions at 100 million per second except for power supply. Model ADC1106-60 is identical with Model ADC1106-100 except that conversions are performed at a rate of 60 million per second.

SPECIFICATIONS

ANALOG INPUT SIGNAL	
Accuracy	±0.75%±½LSB
Full Range	±2 volts
Connection	Coaxial, Single Ended
Input Impedance	50 Ohms
Bandwidth, 1dB	50 MHz
CTC (Command to Convert) STROBE	
Logic Type	ECL
Input Impedance	50 Ohms
Conversion	Initiated on negative going transition
Pulse Repetition Rate (PRR)	100,000,000/Second
Pulse Duration	Square wave
END OF CONVERSION (EOC)	
Pulse	ECL level, rising edge signifies EOC
Delay	Occurs approx. 30 nanoseconds after CTC Strobe
DATA OUTPUTS	
Code	6-bit Binary and 2's complement with monotonicity
Logic Type	ECL compatible
Drive	50 Ohm lines
Parallel Data Out	Sustained 1 cycle
Output Skew	±1.0 nanosecond (typical)
POWER REQUIREMENT	
+5.2Vdc ± 5% @ 2.0 ampere	
—5.2Vdc ± 5% @ 4.0 ampere	
PACKAGE	Approx. 8.0"x8.0"x3"

Temperature	
Operating	0°C to +50°C
Storage	—55°C to +125°C
Humidity	0 to 99% relative, no condensation

Base price: 1106-60: $6,847.; 1106-100: $13,721.

HIGH SPEED BUFFER MEMORY for A/D converter, high speed data buffering

GENERAL DESCRIPTION

The Model MEM 1108-100/2560 Buffer Memory has been specifically designed for use with Phoenix Data's Ultra High Speed D/A Converters — Models 1105-60/100 1106-60/100, where standard analog conversion rates range as high as 100 MHz for high speed communication and other data acquisition applications. The MEM 1108-100/2560 is also ideally suited for use with other A/D converter systems employing up to 8-bit resolution and ECL interface logic. When used with Phoenix Data A/D Converters, the buffer memory accepts the 6-bit converter output, and in addition, two external CPU supplied control or identifier bits as a part of each 8-bit data word. All memory write operations are synchronized (strobed) by the converter End-Of-Conversion (EOC) pulse.

Phoenix Data's Model MEM 1108-100/2560 High Speed Buffer Memory represents the latest in memory design technology and data acquisition modules — allowing the user to buffer ultra-high speed analog data conversions for greater efficiency and more effective use of computer interfacing. Data blocks of 2560 A/D converted data words can be accumulated and stored in memory at rates of up to 100 megawords per second, while memory read-out is accomplished at a 4 megaword rate when using the internal buffer clock, or at any other selected rate up to 4 megawords per second when using an externally supplied clock.

FEATURES

- 2560 Word Storage Capacity
- 8-bit Word, Parallel Input/Output
- Up to 100 MHz Word Input Rate
- Up to 4 MHz Word Output Rate
- Load Synchronized With End-Of-Conversion Pulse (EOC)
- Internal/External Buffer Read Clock Selection
- ECL Logic (Converter Interface)
- TTL Logic (CPU Interface)
- Output & Recirculate Mode
- Output & Clear Mode
- Fill & Continue Mode
- Fill & Stop Mode

SPECIFICATIONS

- General

Memory Capacity	2560 words
Word Length	8 bits
Input Word Rate	Up to 100 megawords per second
Output Word Rate	4 Megawords per second with internal clock — 0 to 4 Megawords per second with external clock

- Input Data Format — Bit parallel, word serial

Output Data Format	Bit parallel, word serial (sequential . . . first in, first out)

- Input Control Signals

Write Clock (EOC Pulse)	Falling edge of ADC End of Conversion (EOC) pulse (ECL logic)
External Read Clock	0 to 4 MHz buffer read clock from CPU
Output And Recirculate	Output and Recirculate enable from CPU (TTL logic)
Output And Clear	Output and Clear enable from CPU (TTL logic)
Fill And Continue	Continuous Fill enable from CPU (TTL logic)
Fill And Stop	Fill and Stop enable from CPU (TTL logic)
External Stop	External Stop signal from CPU (TTL logic)

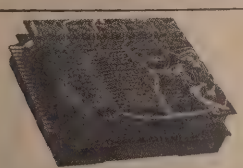
- Output Control Signals

Buffer Full	Logic level from memory (TTL logic). Occurs on first occurrence of location 2560 write (load), in Fill And Stop mode only.
Buffer Empty	Logic level from memory (TTL logic). Occurs on location 2560 read (empty), in Output And Stop mode only.
Output Strobe	One data word outputted for each strobe (TTL logic)

- Operating Modes

Write Memory	1. Fill and Stop — normal sequencial write and terminate on Buffer Full signal (2560 words stored) 2. Fill and Continue — sequential over-write until terminated by External Stop signal from CPU
Read Memory	1. Output and Clear — normal sequential read and clear, terminating on Buffer Empty signal (2560 words outputted) 2. Output and Recirculate — sequential read and circulate until terminated by External Stop signal from CPU

Base price: MEM 1108-100/2560: $10,577.



NEW AND EXCLUSIVE A/D CONVERTER features:
High Speed: 4 μsec. High Resolution: 15 Bits. High Accuracy: ±0.0065% of FSR

Phoenix Data's new Model ADC1215F A/D converter is a high-performance design with a total conversion time of 4 microseconds (250,000 conversions per second), a resolution of 15 binary bits (1 part in 32,767), and guaranteed accuracy of ±0.0065% of FSR in addition to complete monotonicity. Analog dynamic range is in excess of 86 db. Model ADC1215F is available in two basic models: single-ended and differential. The ADC1215F utilizes a single fold-back technique in conjunction with successive approximation conversions to achieve an equivalent conversion rate of 267 nanoseconds per bit.

Model ADC1215 is identical with the ADC1215F except that conversion time is 10 microseconds.

ADC1215F SPECIFICATIONS

ENCODING (Digital Quantizing)	
Number of Bits	15 binary bits
Accuracy (% of Full Range)	0.0065%
Temperature Coefficient	±10 PPM/°C
Resolution	1 part in 32,767
Conversion Time (Total)	4.0 microseconds
ANALOG INPUT SIGNAL	
Standard Full Range	±10V
Connection	Single Ended or Diff. Opt.
Input Impedance	100 Megohm
Overvoltage	±15V, Maximum
CONTROLS, INPUTS AND OUTPUTS	
Output Codes	2's Complement and Offset Binary
Logic Levels	TTL/DTL
Data Output Drive	Full TTL capability
Output Data	Stored until updated at end of conversion
Command to Convert	Conversion is initiated on leading edge of positive going pulse.
Busy Output	Goes true at CTC and False at End of Conversion
End of Conversion	Pulse goes true at End of Conversion 100 nanoseconds duration
Overrange	Output goes full scale and overrange bit goes true
ENVIRONMENTAL	
Temperature/Operating	0°C to +70°C
Temperature/Storage	—55°C to +100°C
Humidity	0 to 99% Relative, non-condensing
POWER REQUIREMENTS	
+15V, ±5% @ 150 MA • —15V, ±5% @ 75 MA • +5V, ±5% @ 900 MA	

Base price: ADC1215: $1,280.; ADC1215F: $1,922.; ADC1215L: $2,190.

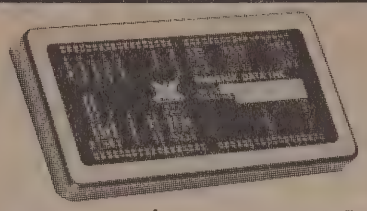
PDI® Analog to Digital Converters



ENCASED A/D CONVERTERS

All 42 units in Phoenix Data's new series of encased, modular A/D converters — ADC1300 thru ADC1800 — employ the highly reliable and stable voltage switching successive approximation conversion technique. Note these features:

1300 SERIES / Model No.	1308	1309	1310	1311	1312	1313	1314

Price 1 to 9	$825.	$895.	$1,045.

NOTE: All characteristics are available in open-constructed modules. Write for details.

*Total conversion time from trailing edge of TTL/DTL Logic level.

**The conversion error includes all error sources, ±½ LSB and all temperature related errors over the temperature range of 10° to 40°C up to 12 bits and 15° to 35°C for 13 and 14 bit resolution with no adjustments. If an input range other than that specified at time of purchase is selected, the gain and offset may have to be adjusted.

***The temperature coefficient includes all gain, offset, reference, and differential linearity related temperature effects over 0 to 70°C. For extended operating temperature ranges the T.C. degrades by a factor of 2 from +70°C to +125°C and from 0°C to —55°C.

NOTES:
1. Lower resolution units available on request.
2. Conversion time includes settling time to rated accuracy for a full-range step (worse case). See Conversion Timing Diagram.
3. Accuracy figures include all error parameters.
4. Standard operating temperature range is 0°C to 70°C. Extended temperature ranges are available. Also, on special order, units available to 2.5 ppm/°C.
5. For Model Number Coding, see Ordering information.
6. For special configurations or applications, contact your local Phoenix Data, Inc. representative or the factory.
7. The temperature coefficient includes all gain, offset, reference and differential linearity related temperature effects over 0 to 70°C. For extended operating temperature ranges the T.C. degrades by a factor of 2 from +70°C to +90°C and from 0°C to —55°C.

NOTE 1: 15 bit SAH's require tuning to the individual ADC.
NOTE 2: All SAH's are designed to have a full scale range of ±10V output. That is: a voltage range of +5V input will have a gain of 2.

ENCASED SAMPLE AND HOLD

(2" long x 2" wide x 0.39" high, hot-tin-dipped steel covered module.) Shielded on six sides against RFI and on five sides against EMI. Completely repairable. One SAH per card.

Model	Connection	INPUT Range	Impedance	Aperture	Accuracy	Settling Time	Output Current	Hold Mode Droop	Price 1 to 9
SAH1	Single ended	+10V to —10V	100 Mohm	50 ns	±0.01% of FS	10us to ±0.01%	±2 ma	2uv/us	$149.
SAH3	Single ended	+10V to —10V	100 Mohm	10 ns	±0.025% of FS	1us to ±0.025%	±5 ma	50uV/us	234.

MULTIPLEXERS. Open or encased modules; Standard 44-pin or double-ended card for back rack insertion. Input ranges to ±10V standard, others optional. Overvoltage protection optional. Single ended or Differential Inputs, Output submultiplexing.

MODEL	DESCRIPTION	PRICE
870S	8 channel Differential or	$322.
1670S	16 channel Single Ended Standard card.	322.
1670D	16 channel Singled Ended; double ended card.	$322.
870D	8 channel Differential; double ended card.	322.
MUX08	8 channel Single Ended; 2"L x 2"W x 0.39"H encased module.	168.

Prices subject to change without notice.

ANALOG-TO-DIGITAL
For the Highest Accuracy

GMAD Series Analog-to-Digital Converters

Here are the world's most reliable Analog-to-Digital Conversion Systems with speed and resolution to meet the needs of every instrumentation and data conversion system.

From the 'world's fastest high resolution ADC'—the GMAD-01 — to the new 'low cost' GMAD-4 that can be easily expanded to over 1000 analog input channels at less than $25 per channel, Preston's GM Series of ADCs are delivered with exactly the right amplifiers, multiplexers, controls, indicators and interface features to give your system the ultimate in accuracy, flexibility and efficiency!

And every model in the GM Series comes complete with integral power supplies and interface connectors — ready to install in a standard 19 inch wide rack.

With the GM Series of ADCs, you have a complete selection of low-level and high-level analog amplifiers and multiplexers. This versatile input system is further complemented by a choice of several Sample-and-Hold Amplifiers and special gain scaling buffer amplifiers whose configurations include manual or remote programmed address and automatic gain control capability.

For complete information including detailed specifications, block diagrams, timing charts and examples of overall system performance, call or write Preston Scientific. We'll send you our "Specifying Guide" and include price and delivery information, too!

Preston's ADCs interface with all types of analog input signals —

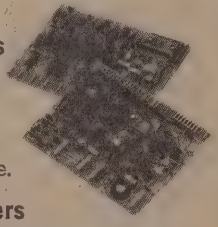
Model GMM Multiplexers

Available with both single-ended and differential inputs, GMM Multiplexers provide a common output line isolated from all other signals by 2000 Megohms.

Expandable to over 1000 channels as system requirements grow, Model GMM Multiplexers specifications include —

Input Impedance	Greater than 50 Megohms
Switching Time	Less than 1 microsecond
Input Offset Current	Less than 10 nanoamps
Input Voltage	Up to ±10 volts
Crosstalk	Less than ±0.01% for 100 channels
Linearity	±0.01% of Full Scale
Zero Drift	Less than ±0.01% of F.S.

Model GMD-PG and GMD-ADC Programmable Gain Amplifiers

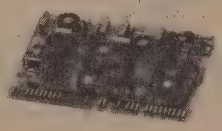


These gain scaling amplifiers are specifically designed for Analog-to-Digital Conversion applications where the full scale amplitude of the input signals vary over a wide range.

Model 8300 XWB Series Amplifiers

For the ultimate in accuracy, reliability and system flexibility, the exclusive "Balanced Precision" performance of the 8300 XWB Series Amplifier is unsurpassed. Models are available with both manual and remotely programmed gain and filter selection on a per-channel basis for use in ADC systems.

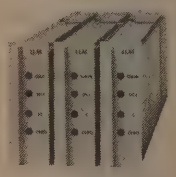
Model GMD Amplifier-Multiplexers



This card-mounted amplifier-multiplexer provides a low-cost amplifier-per-channel input signal system for full scale analog signals in the range from 10 millivolts to 100 volts. Optional output filters cover frequencies from 1 Hz to 60 kHz.

Model LLM Series Low Level Multiplexers

Preston's newest multi-channel analog input system provides the high accuracy of "amplifier-per-channel" performance with transformer isolated low-level multiplexing at channel rates up to 50 kHz.

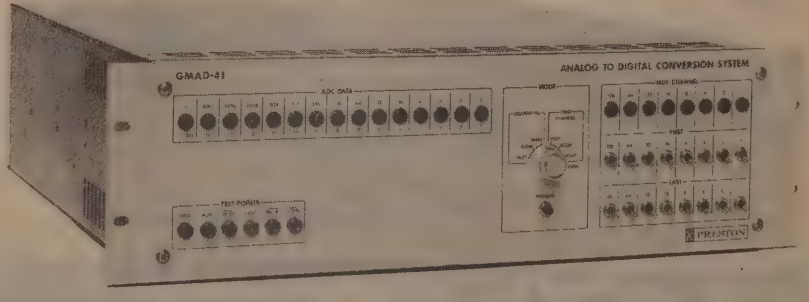


Gain accuracy, stability and linearity are all within ±0.01% of full scale, and the input impedance is 100 Megohms.

As many as 2048 data channels can be combined in a single system. Performance includes accuracy that is compatible with a 14 bit resolution ADC and provides a CMR of 130 db at 60 Hz with a 350 volt CMV. Stability specifications include a Zero TC of less than 0.1 uV/°C RTI and 0.1 MV/°C RTO, resulting in the same "Balanced Precision" specifications that are the hallmark of Preston's famous instrumentation amplifiers.

Outstanding features of the LLM System include INPUT DATA FILTERS from 10 Hz to 30 kHz, PROGRAMMABLE GAIN from 1X to 1000X on a per-channel basis (gain memory optional), and DIGITAL AVERAGING using the ADC as a digital filter (programmable on a per-channel basis with optional memory).

There's a lot more to tell about how Preston's LLM Systems provide the ultimate in low-level A-D conversion with sophisticated performance and operating features at moderate cost, so please request our comprehensive 12-page brochure for the complete LLM System story.



CONVERSION SYSTEMS
in Data Acquisition Systems

PRESTON

Five Models Are Included In the GMAD Series To Provide An Exceptionally Wide Range of Speeds and Resolutions.

Resolution	Accuracy (% of F.S. ±½ L.S.B.)	Conversion Time GMAD-01	GMAD-1	GMAD-2	GMAD-3	GMAD-4
14 binary bits + sign	0.010%	*	1.5 μsec	5.0 μsec	10 μsec	20 μsec
13 binary bits + sign	0.015%	*	1.4 μsec	4.5 μsec	9 μsec	19 μsec
12 binary bits + sign	0.025%	0.5 μsec	1.2 μsec	4.0 μsec	8 μsec	18 μsec
11 binary bits + sign	0.05%	0.4 μsec	1.0 μsec	3.5 μsec	7 μsec	17 μsec
10 binary bits + sign	0.1%	0.3 μsec	0.3 μsec	3.0 μsec	*	16 μsec
9 binary bits + sign	0.2%	0.2 μsec	0.2 μsec	2.5 μsec	*	*
8 binary bits + sign	0.4%	0.1 μsec	0.1 μsec	2.0 μsec	*	*
7 binary bits + sign	0.8%	*	0.1 μsec	1.5 μsec	*	*
4-digit BCD and sign	0.01%	*	*	10 μsec	40 μsec	*
3-digit BCD and sign	0.1%	*	*	8 μsec	32 μsec	*

*These configurations not available

and all types of digital output, control and computer signals, too.

Model GMDAC-2 Digital-to-Analog Converters

Module-mounted digital-to-analog converters are also available in the GM Series Systems to make the generation of analog data simulation as accurate and reliable as the basic A-D converter.

Specifications include 15 bit resolution and accuracy, update rates to 500 kHz and outputs of 10 volts or 100 volts full scale.

Model GMCAM and GMSDM Memory (New for '78)

Channel Address (CAM) Random Access Memories are now available for most GM Series ADC Systems. The Channel Address Memory allows the user to enter a list of channels to be converted. The GM System control logic then sequentially scans the memory locations and digitizes the data on the listed channels.

System Data (SDM) Output Memories provide built-in storage capability for the digitized data. The SDM Memory is available for either Random Access or FI-FO (First-In — First Out) type operations. These output data memories provide the user with a limited on-line storage system to reduce the data servicing overhead usually allocated to the user's computer system.

Memory Systems are available in 256, 512 and 1024 word blocks with 8 to 16 bit word length.

Model GMDSRC Digitally Programmable Clock

This optional crystal-based scan rate clock permits selection of a wide range of multiplexing rates so that the ADC system's speed can be optimized on a per-channel basis.

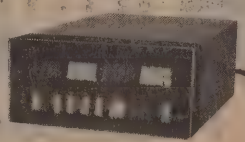
The GMAD-1 ADC System shown here is equipped with the clock address control, controls for multiplexer first- and last-channel limits (GMC Logic System) and address switches to enter gain address for GMD-PG/AGC Gain Scaling Amplifiers.

Front panel indicators also provide ADC Data and Currently Addressed Channel as a LED binary display.

Logic Interface To Your Computer

Direct interfacing with your computer or controller can now be made an integral part of every GMAD Series A/D Conversion System. Preston can include plug-in logic and control modules that provide the right sequencing and logic levels to match your particular computer system.

Just let us know the type of computer you plan to interface with our ADC, and we'll provide all the 'hand-shaking' signals you need.



If you're using a DEC PDP-11, HP 2100, Varian V-73, Data General NOVA or other similar computers, we already have the interface system ready to install, and we'll even provide the interconnecting cables!

Save yourself time, trouble and expense. Call or write Preston Scientific for details. We'll make certain you get a complete GMAD ADC System — ready to operate the first day it arrives!

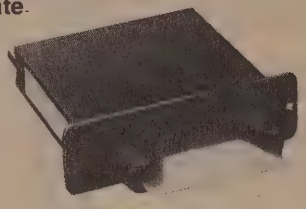
CARD AND BADGE READERS

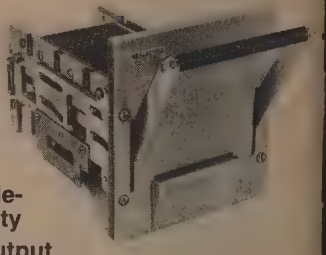
SOLID STATE BADGE READERS



- Completely solid state. One moving part
- Reads up to 22 Columns, 12 rows, Alpha-Numeric
- Absolute validation of readings
- Compact, low-cost

An ultra-reliable badge reader for time-clock, production floor data collection, security systems and other data station requirements. Reads complete Hollerith information. Provides column strobe for every column regardless of punched data. Cannot be "teased," misoriented, or otherwise fooled. Serial data output.

STATIC CARD READERS

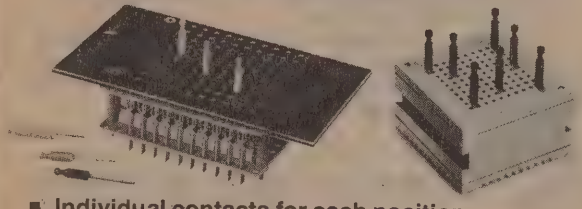


- 80 or 51 column x 12 row models
- Static. Data remains in "read" mode until card is removed
- Redundant contact designs assure reliability
- Discreet input and output at every data position

The best for heavy industrial use. Single transaction readers, manually operated with heavy duty mechanisms for long life. Buss bars available for rows or columns or both. Complete interlock systems to eliminate misinformation from incorrectly positioned documents.

PROGRAMMING DEVICES

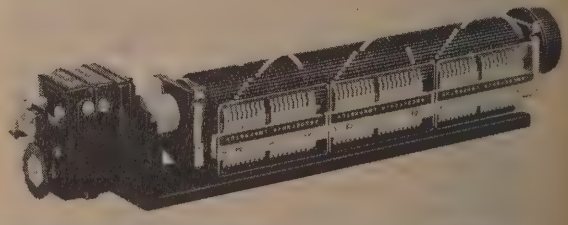
PROGRAM BOARDS



- Individual contacts for each position. No interaction
- Complete range of accessories for every type of programming
- Available in .250", 4mm, or .100" c-c spacing, in any number of holes

The economical, simple way to program, switch, or test any signals. Simple electrical matrix that can be interconnected by shorting or diode pins. Ideal for process control, machine control, sequential testing and dozens of other applications. Direct readout or program at all times.

PROGRAM SWITCHES



- 60 programs on drum. Up to 60 circuit control
- Manual, time based, or stepper drives
- 1 Amp, 7 Amp or 15 Amp carrying capacity

Extra compact programming capability at reasonable cost with high reliability. Simply set programs with inserts on each line of 60 position drum. Programs will run sequentially either on real time base, manually, or upon command from process feedback.

TAURUS punched card readers

STATIC/PARALLEL... SERIAL...SERIAL/PARALLEL

A complete line of readers for OEM and system applications

FOR INDUSTRIAL, COMMERCIAL, INSTITUTIONAL USES

BADGE/CARD READERS

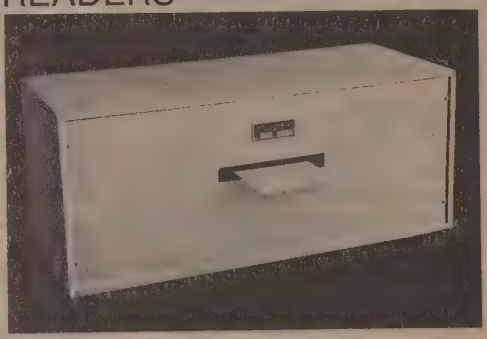
New Series H . . .
4 standard models

Read cards/badges of up to 12 rows and 10, 20, 30, or 68 columns. Optical reading with no moving parts, ensuring error-free readout, long life, minimum maintenance. Completely self-contained. To operate, merely insert badge or card fully and withdraw. Readout is character (column) serial, bit (row) parallel.

Particularly suitable for security and access-control applications. Can easily replace less satisfactory readers in existing installations. Designed for OEM and system applications. Custom-feature models can be supplied.

The 10-column Model H-10 is pictured. For complete details on our complete badge/card reader line, request Series H Catalog.

SERIAL READERS



Read cards one column at a time. Photo-electric hole sensing. Solid-state logic or relay output. With or without hopper feed. Free-standing or panel-mount. Various output formatting . . . bit parallel, ASCII, teletype, etc. In use since 1967.

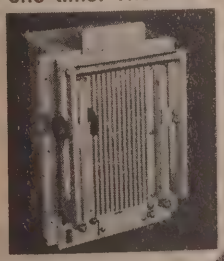
- 168 standard options. Custom options also available.
- 6 Card-Handling Modes
- 7 Readout Modes
- 3 Data-Valid Features

These card readers are specifically designed for OEM and systems applications in the warehousing, data-handling, industrial and process control, manufacturing and other fields where conditions are not especially favorable for card readers.

STATIC OR PARALLEL READERS . . . 3 MODELS

Read all or part of an IBM card in parallel. Put card in, push handle. HOLE . . . closed switch. NO HOLE . . . open switch. (Opposite can also be provided.) Contacts not through the card. Reliable indirect switching. All switching at one time. Thousands in use since 1956.

MODEL M-4A
up to 80 columns



MODEL JM-4A
up to 40 columns

MODEL CM-20
specifically designed for stacker cranes

For complete details on our lines of serial and static/parallel readers, request Punched Card Readers Catalog.

We also supply . . .
Teflon-Insulated Terminals . . .
Circuitrak PCB Guides.

TIMING EQUIPMENT

8363
Time Code Translator/Generator

SPECIFICATIONS

TIME BASE
EXTERNAL FREQUENCY STANDARD: 1 MHz (5 MHz Optional). **OPTIONAL INTERNAL FREQUENCY STANDARD: Frequency:** 1 MHz. **Temperature Stability:** $\pm 3 \times 10^{-9}$/°C. **Aging Rate:** $\pm 5 \times 10^{-9}$/day. **Retrace:** $\pm 1 \times 10^{-8}$ after 24 hours off.

Model 8363
Specify Model 8362 if days are desired

SYNCHRONIZATION
Automatic WWV Synchronization: WWV tick. **External Start:** Pulse. **Slew:** 1 μs/s through 100 ms/s in decade steps. **Propagation Delay:** Compensates for delays of 0 to 99.9 ms (18.6K miles) in 0.1 ms increments. **Translate Mode Synchronization:** Unit locks onto and remains fully synchronized to incoming code. Thumbwheel switches may be used to compensate for transmission delays of 0 to 99.9 ms.

TIME DISPLAY
Six 0.6-inch planar indicators display time-of-day.

CODE INPUT
Format: Available formats include IRIG A, IRIG B, IRIG G, NASA 36 Bit, XR3, and 2137. **Level:** 0.5 to 8 volts peak-to-peak (wide range options available).

CODE OUTPUTS
Formats: IRIG, NASA, XR3, and 2137 in modulated and DC level-shift forms. **Level-Shift Codes:** Standard TTL; adjustable outputs (0 to 10V peak into 300 ohms) optionally available. **Modulated Codes:** Mark/space ratio 3.3:1; coherence to "on-time" less than $\pm 1°$ of the carrier cycle; crossover discontinuities less than 1 percent; amplitude adjustable from 0 to 7 volts peak-to-peak; IRIG A, B, G, NASA 36 Bit, and 2137 will drive 50 ohms; others will drive 500 ohms.

OUTPUT OPTIONS
Parallel: BCD time-of-day plus 1 pps strobe, straight-binary time-of-day plus 1 pps strobe, or group-binary time-of-day plus 1 pps strobe. **Sinewave:** Consult factory for available frequencies and levels. **Millisecond and Rate:** BCD milliseconds plus 1 ppm through 10K pps, phase-coherent to within 10 ns.

OPTIONAL COMPUTER INTERFACE
Addressable storage of output formats and remote control of generator functions.

POWER
95 to 135 VAC, 48 to 440 Hz, RFI filtered. **Battery Backup Provision:** 11 to 14 VDC (display not on).

PHYSICAL
Weight: 12 pounds. **Mounting:** Standard 19-inch rack (slides optional). **Size:** 19 inches wide x 3.47 inches high x 15 inches deep. **Temperature:** 0°C to +60°C.

8365
Universal IRIG Time Code Generator

SPECIFICATIONS

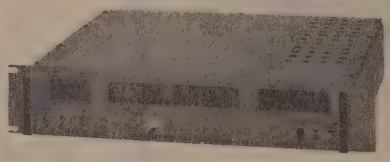
TIME BASE
EXTERNAL FREQUENCY STANDARD: 1 MHz (5 MHz optional). **OPTIONAL INTERNAL FREQUENCY STANDARD: Frequency:** 1 MHz. **Temperature Stability:** $\pm 3 \times 10^{-9}$/°C. **Aging Rate:** $\pm 5 \times 10^{-9}$/day. **Retrace:** $\pm 1 \times 10^{-8}$ after 24 hours off.

SYNCHRONIZATION
Automatic WWV Synchronization: WWV tick. **External Start:** Pulse. **Slew:** 1 μs/s through 100 ms/s in decade steps. **Propagation Delay:** Compensates for delays of 0 to 99.9 ms (18.6K miles) in 0.1 ms increments.

LEAP YEAR RESET
Day 001 after day 365 or 366.

TIME DISPLAY
Nine 0.6-inch planar indicators display time-of-year.

CODE OUTPUTS
Formats: IRIG A, IRIG B, IRIG D, IRIG E, IRIG G, and IRIG H in DC level-shift form. **Level:** Standard TTL; adjustable outputs (0 to 10V peak into 300 ohms) optionally available. **Optional Modulated Codes:** Mark/space ratio 3.3:1; coherence to "on-time" less than $\pm 1°$ of the carrier cycle; crossover discontinuities less than 1 percent; amplitude adjustable from zero to 7V peak-to-peak; IRIG A, B, G will drive 50 ohms, others will drive 500 ohms.



OUTPUT OPTIONS
Parallel: BCD time-of-year plus 1 pps strobe, straight-binary time-of-day plus 1 pps strobe, and group-binary time-of-day plus 1 pps strobe. **Sinewave:** Consult factory for selection of frequencies and levels. **Millisecond and Rate:** BCD milliseconds plus 1 ppm through 10K pps, phase-coherent to within 100 ns.

OPTIONAL COMPUTER INTERFACE
Addressable storage of output formats and remote control of generator functions.

POWER
95 to 135 VAC, 48 to 440 Hz, RFI filtered. **Battery Backup Provision:** 11 to 14 VDC (display not on).

PHYSICAL
Weight: 12 pounds. **Mounting:** Standard 19-inch rack (slides optional). **Size:** 19 inches wide x 3.47 inches high x 15 inches deep. **Temperature:** 0°C to +60°C.

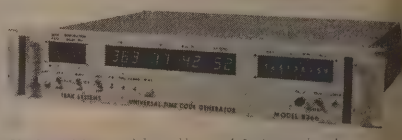
8366
Time Code Generator

SPECIFICATIONS

TIME BASE
EXTERNAL FREQUENCY STANDARD: 1 MHz (5 MHz optional). **OPTIONAL INTERNAL FREQUENCY STANDARD: Frequency:** 1 MHz. **Temperature Stability:** $\pm 3 \times 10^{-9}$/°C. **Aging Rate:** $\pm 5 \times 10^{-9}$/day. **Retrace:** $\pm 1 \times 10^{-8}$ after 24 hours off.

SYNCHRONIZATION
Automatic WWV Synchronization: WWV tick. **External Start:** Pulse. **Slew:** 1 μs/s through 100 ms/s in decade steps. **Propagation Delay:** Compensates for delays of 0 to 99.9 ms (18.6K miles) in 0.1 ms increments.

LEAP YEAR RESET
Day 001 after day 365 or 366.



Model 8366
Specify Model 8361 if days not desired

TIME DISPLAY
Nine 0.6-inch planar indicators display time-of-year.

CODE OUTPUTS
Formats: IRIG, NASA, XR3, and 2137 in modulated and DC level-shift forms. **Level-Shift Codes:** Standard TTL; adjustable outputs (0 to 10V peak into 300 ohms) optionally available. **Optional Modulated Codes:** Mark/space ratio 3.3:1; coherence to "on-time" less than $\pm 1°$ of the carrier cycle; crossover discontinuities less than 1 percent; amplitude adjustable from zero to 7 volts peak-to-peak; IRIG A, B, G, NASA 36 Bit, and 2137 will drive 50 ohms; others will drive 500 ohms.

OUTPUT OPTIONS
Parallel: BCD time-of-year plus 1 pps strobe, straight-binary time-of-day plus 1 pps strobe, and group-binary time-of-day plus 1 pps strobe. **Sinewave:** Consult factory for selection of frequencies and levels. **Millisecond and Rate:** BCD milliseconds plus 1 ppm through 10K pps, phase-coherent to within 100 ns.

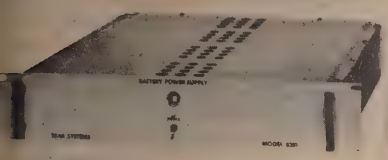
OPTIONAL COMPUTER INTERFACE
Addressable storage of output formats and remote control of generator functions.

POWER
95 to 135 VAC, 48 to 440 Hz, RFI filtered. **Battery Backup Provision:** 11 to 14 VDC (display not on).

PHYSICAL
Weight: 12 pounds. **Mounting:** Standard 19-inch rack (slides optional). **Size:** 19 inches wide x 3.47 inches high x 15 inches deep. **Temperature:** 0°C to +60°C.

8381 & 8317
Battery Power Supply

MODEL 8381
esigned to smoothly and instantaneously upply all of the necessary DC voltages to RAK Timing Equipment in the event of loss of rimary AC power. The unit has the capacity to ower the Timing Equipment for up to 36 ours, depending on the number of options in he equipment being operated.



SPECIFICATIONS

SWITCHES/INDICATORS
ON/OFF toggle switch; charging lamp indicator; analog voltmeter.

PHYSICAL
Weight: 55 pounds. **Mounting:** Standard 19-inch rack. **Size:** 19 inches wide x 3.47 inches high x 22 inches deep. **Panel Finish:** Light Gray. **Temperature:** 0°C to +60°C.

RECHARGE TIME
20 hours to recharge after a complete discharge cycle.

MODEL 8317

SPECIFICATION
Same as 8381 except:

POWER CAPACITY
Six to eight hours.

PHYSICAL
Weight: 23 pounds. **Size:** 19 inches wide x 3.47 inches high x 12 inches deep.

RECHARGE TIME
8 hours to recharge after a complete discharge cycle.

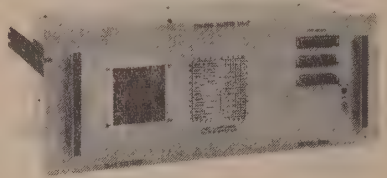
8383
Timing Buffer Unit

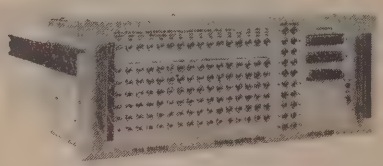
SPECIFICATIONS
INPUT
Input levels: up to ± 10 Volts.
Frequency response: DC to 5 MHz. **Input impedance:** greater than 180 K ohms per channel. DC to 100 KHz, 1 K ohm at 5 MHz.

OUTPUT
Output level: 95% of input (minimum). **Output Impedance:** 10 ohms max. at 1 KHz. Wide range of applications include buffering time codes, pulse rates, parallel time data, and sine wave rates for distribution to other equipment. Some of the many options available: (1) Front panel patch fields allow patching of any input time code or rate into any output. (2) Front panel test points. (3) Precision rate and time codes input up to 20 channels and provide six isolated outputs per channel. **Example:** Input a single ended NASA PB-2 parallel code at TT logic levels and provide two separate outputs at RS422 differential balanced output levels. Will accept 49 dynamic bits of the PB-2 code.

INPUT POWER
115 VAC ±10%, 50 to 440 Hz.

PHYSICAL
3½" or 5¼" deep x 19" standard rack mount.





8385
Fault Sensing and Switching Unit

SPECIFICATIONS
INPUT
Modulated codes: Formats, IRIG "A" (10 KHz), IRIG "B" (1 KHz), IRIG "D" (1 KHz), IRIG "E" (1 KHz), IRIG "H" (1 KHz). Level, 1 to 7 V_{pp}. Mark/space ratio, 2:1 to 6:1. Loading, IRIG "B": 4K ohms; others: none. **Level-shift codes:** Formats, IRIG "A", "B", "D", "E", "G", "H". Rates, 1 pps, 10 pps, 100 pps, 1 K pps. Baseline, 0.2 ±0.2 Vdc. Amplitude, 3.4 ±0.1 Vdc. Loading, IRIG "B": 2 TTL LS loads; others: one TTL LS load.

PERFORMANCE
(1) Monitors the IRIG "B" outputs from two time code generators. (2) Provides automatic and manual switch-over. (3) Monitors IRIG "B" dropouts and modulation irregularities. (4) Compares phase difference of greater than 10 μ sec or bit dropout. (5) Each type of error lights a front panel indicator and sounds an audible alarm.

PHYSICAL
Weight: 5 lbs. **Height:** 3½". **Depth:** 6¼" excluding projections. Standard 19" rack mount.

Telex 52-827

TIMING EQUIPMENT

8371 & 8395
Time Code Readers

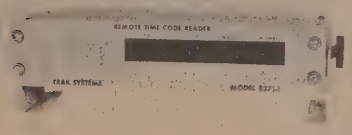
SPECIFICATIONS
INPUTS
Code input: IRIG B, IRIG E, NASA 36 BIT, XR3, 2137. **Impedance:** 150K ohms level: 0.5 to 10.0Vpp without adjustments. **Modulation Ratio:** 2:1 to 6:1. **Carrier Frequency:** 100Hz (IRIG E), 250Hz (XR3) 1000Hz (others)

SYNCHRONIZATION
Display updates within ±5ms of "on-time" (once per second)

DISPLAY
Seven-segment red LED's. Numeral height is 0.5 inches with reading distance of 30 feet.

INPUT POWER
110 or 220 VAC ±10%, 50 to 400 Hz, 15 watts nominal.

PHYSICAL
Weight: 4 pounds. **Height:** 3 inches. **Width:** 14 inches. **Depth:** 5 inches (excluding ¾" heat sink), mounting bracket supplied.

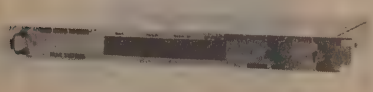


MODEL 8395
SPECIFICATIONS
INPUTS
Code input: IRIG A or B, NASA 36 BIT, XR3, 2137. **Impedance:** 4 ohms. **Level:** 50 mv to 10 Vpp (wider range option available). **Modulation ratio:** 2:1 to 6:1. **Carrier Frequency:** 100Hz to 25K Hz. **Input filtering:** Optionally available.

DISPLAY
Red LED's. Numeral height is 0.5 inches. Display test optional.

INPUT POWER
115 VAC 10%, 60 to 400Hz.

OUPUTS
Serial code: Buffered input code capable of driving a minimum of 200 feet of unterminated coaxial cable or twisted pair (optional). **Parallel:** BCD days, hours, minutes and seconds, DTL and TTL compatible (optional). **Isolation:** All outputs separately buffered and short-circuit proof.



PHYSICAL
Weight: 8 pounds. **Height:** 1.72 inches. **Width:** 19 inches. **Depth:** 13.25 inches. **Mounting:** Standard 19 inch rack. **Temperature:** 0°C to +60°C.

8386
Time Code Generator/ Reader

SPECIFICATIONS
TIME BASE
Internal frequency standard: 1 MHz. **Temperature stability:** $\pm 1 \times 10^{-9}$/°C. **Aging rate:** $\pm 5 \times 10^{-9}$, 1 day. **Retrace:** $\pm 1 \times 10^{-8}$ after 24 hours off.

Automatic direction detection: will read forward and reverse. **Automatic error by-pass:** will read distorted codes.

CODE INPUT
Format: IRIG "B" standard. Others optionally available. **Level:** .1 V_{pp} to 14 V_{pp}. **Modulation ratio:** 2:1 to 6:1.

CODE OUTPUT
Format: IRIG "B" standard. Others optionally available.

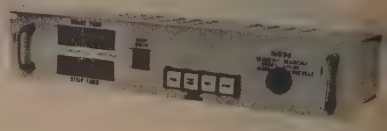
OPTIONS
In both Generator and Read Modes: BCD millisecond (12 bits) and 1 pps through 1000 pps rate outputs. **Parallel outputs:** BCD time of year; straight binary time of day; group binary time of day. **Slow code outputs:** (1) Time of year in BCD amplitude- and width-modulated format. (2) Frame rates of 1, 5 and 10 seconds or 1 and 10 minutes. (3) Output level from 1 to 10 V_{pp} into 300 ohms.

INPUT POWER
95 to 135 VAC, 48 to 400 Hz, 25 W nominal.

PHYSICAL
Weight: 15 lbs. **Chassis:** standard 19" rack mount. **Height:** 3½" and **Depth:** 15", exclusive of projections.

8384
Time Code Generator/Tap Search Unit

SPECIFICATIONS
INPUT
Amplitude: .2 to 14 V_{pp}. **Impedance:** 50 K ohms. **Format:** IRIG "B". Others optionally available. **Mark/space ratio:** 3:1 to 6:1. **Direction:** Forward or reverse. **Frequency:** 200 Hz to 100 KHz, with filter supplied; to 250 KHz with optional filters.



OUTPUT
DC level-shift code: Baseline, 0.2 ±0.2 Vdc. Amplitude, 3.4 ±1.0 Vdc. Rise time, 20 ns max. 1 to 90% amplitude. Fall time, 20 ns max. 90 to 10% amplitude. Loading, will drive 5 standard TTL load **Adjustable dc level-shift code (optional):** Baseline, 0.2 ±0.2 Vdc. Amplitude, 0 to 10 Volts peak. Rise time, 50 ns max. 10 to 90% amplitude. Fall time, ns max. 90 to 10% amplitude. Loading — will dr 300 ohms. **Modulated code:** Format, IRIG "B". Leve to 7 V_{pp},adjustable. Mark/space ratio, 2:1 to 6:1, adjustable. Output loading, 50 ohms min. (500 oh for 100 Hz codes). Coherence to "on-time" less tha ±1° of one carrier cycle; crossover discontinuities less than 1%. **Start coincidence pulse:** Baseline, 3. ±1.0 Vdc. Pulse level, 0.2 ±0.2 Vdc. Rise and fal times, 20 ns max. 10 to 90% amplitude. Duration, second nominal. Description, pulse is generated a selected START TIME when unit is in FWD (Playbac mode. **Stop coincidence pulse:** Same as start coincidence pulse except that pulse appears at selected STOP TIME. **Recorder "Stop" control:** All three connections of form-C relay. Contacts rated 3A, 130 Vac. Closure time for command is one second nominal. **Recorder "Fwd" (play) control:** Same as "Stop" control. **Recorder "Fast Fwd" control:** Same as "Stop" control. **Recorder "Rev" control:** Same as "Stop" control. **Recorder "Command" control:** Relay closure coincident with each of the four commands described above.

PHYSICAL
Height: 3½". **Depth:** 15" exclusive of projections. Standard 19" rack mount.

INPUT POWER
95 to 135 Vac, 48 to 400 Hz, 35 W nominal.

TIME BASE
Built-in frequency standard: Aging rate, ±5 to 10^{-9}/day or better.

8368
Time Code Generator

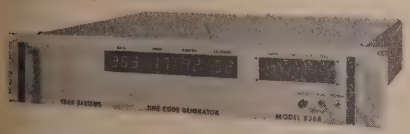
SPECIFICATIONS

TIME BASE
OPTIONAL EXTERNAL FREQUENCY STANDARD: 1 or 5 MHz.
INTERNAL FREQUENCY STANDARD: Frequency: 1 MHz. **Temperature Stability:** $\pm 3 \times 10^{-9}$/°C. **Aging Rate:** $\pm 5 \times 10^{-9}$/day. **Retrace:** $\pm 1 \times 10^{-8}$ after 24 hours off.

LEAP YEAR RESET
Day 001 after day 365 or 366.

TIME DISPLAY
Nine 0.6-inch planar indicators display time-of-year.

CODE OUTPUTS
Formats: IRIG, NASA, XR3, and 2137 in modulated and DC level-shift forms. **Level-Shift Codes:** Standard TTL; adjustable outputs (0 to 10V peak into 300 ohms) optionally available. **Modulated Codes:** Mark/space ratio 3.3:1; coherence to "on-time" less than $\pm 1°$ of the carrier cycle; crossover discontinuities less than 1 percent; amplitude adjustable from 0 to 7 volts peak-to-peak; IRIG A, B, G, NASA 36 Bit, and 2137 will drive 50 ohms; others will drive 500 ohms.



Model 8368
Specify Model 8367 if days not desired

OUTPUT OPTIONS
Parallel: BCD time-of-year plus 1 pps strobe, straight-binary time-of-day plus 1 pps strobe, and group-binary time-of-day plus 1 pps strobe. **Sinewave:** Consult factory for selection of frequencies and levels. **Millisecond and Rate:** BCD milliseconds plus 1 ppm through 10K pps, phase-coherent to within 100 ns.

OPTIONAL COMPUTER INTERFACE
Addressable storage of output formats and remote control of generator functions.

POWER
95 to 135 VAC, 48 to 440 Hz, RFI filtered.
Battery Backup Provision (optional): 11 to 14 VDC (display not on).

PHYSICAL
Weight: 12 pounds. **Mounting:** Standard 19-inch rack (slides optional). **Size:** 19 inches wide x 3.47 inches high x 15 inches deep. **Temperature:** 0°C to +60°C.

8370
Time Code Translator/Generator

SPECIFICATIONS

TIME BASE
OPTIONAL EXTERNAL FREQUENCY STANDARD: 1 or 5 MHz.
INTERNAL FREQUENCY STANDARD: Frequency: 1 MHz. **Temperature Stability:** $\pm 3 \times 10^{-9}$/°C. **Aging Rate:** $\pm 5 \times 10^{-9}$/day. **Retrace:** $\pm 1 \times 10^{-8}$ after 24 hours off.

TRANSLATE MODE SYNCHRONIZATION
Automatically locks onto and remains synchronized to incoming time code.

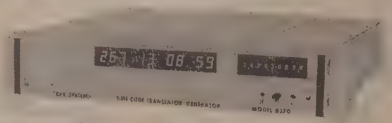
LEAP YEAR RESET
Day 001 after day 365 or 366.

TIME DISPLAY
Nine 0.6-inch planar indicators display time-of-year.

CODE INPUT
Format: Available formats include IRIG A, IRIG B, IRIG G, NASA 36 Bit, XR3, and 2137. **Level:** 0.5 to 8 volts peak-to-peak (wide range options available).

CODE OUTPUTS
Formats: IRIG, NASA, XR3, and 2137 in modulated and DC level-shift forms. **Level-Shift Codes:** Standard TTL; adjustable outputs (0 to 10V peak into 300 ohms) optionally available. **Modulated Codes:** Mark/space ratio 3.3:1; coherence to "on-time" less than $\pm 1°$ of the carrier cycle; crossover discontinuities less than 1 percent; amplitude adjustable from 0 to 7 volts peak-to-peak; IRIG A, B, G, NASA 36 Bit, and 2137 will drive 50 ohms; others will drive 500 ohms.

OUTPUT OPTIONS
Parallel: BCD time-of-year plus 1 pps strobe, straight-binary time-of-day plus 1 pps strobe, and group-binary time-of-day plus 1 pps strobe. **Sinewave:** Consult factory for selection of frequencies and levels. **Millisecond and Rate:** BCD milliseconds plus 1 ppm through 10K pps, phase-coherent to within 100 ns.



Model 8370
Specify Model 8369 if days not desired

OPTIONAL COMPUTER INTERFACE
Addressable storage of output formats and remote control of generator functions.

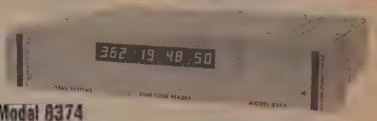
POWER
95 to 135 VAC, 48 to 440 Hz, RFI filtered.
Battery Backup Provision (optional): 11 to 14 VDC (display not on).

PHYSICAL
Weight: 12 pounds. **Mounting:** Standard 19-inch rack (slides optional). **Size:** 19 inches wide x 3.47 inches high x 15 inches deep. **Temperature:** 0°C to +60°C.

8374
Time Code Reader

SPECIFICATIONS

INPUTS
Code Options: IRIG A, IRIG B, NASA 36 Bit (and XR3 and 2137 in Model 8373). **Impedance:** 100K ohms. **Level:** 30 mVpp space to 25 Vpp mark. **Modulation Ratio:** 2:1 to 6:1. **Frequency:** 100 Hz to 40 kHz with filter supplied; to 150 kHz with optional plug-in filter. **Filter:** 40 kHz, 12 dB/octave low pass filter supplied; other frequencies from 250 Hz through 150 kHz optionally available. **Optional Switchable Filter:** 250 Hz, 1000 Hz, 20 kHz, 60 kHz, 80 kHz.



Model 8374
Specify Model 8373 if days not desired

SYNCHRONIZATION
Major scaler is updated when two consecutive frames agree to within one second and continue to count at 1 pps rate derived from incoming code. All code errors are bypassed. Error bypass is active in reverse mode on IRIG and NASA code readers having reverse code reading options.

TIME DISPLAY
Nine 0.6-inch planar indicators display time-of-year.

OUTPUTS
Serial Code: Buffered input code capable of driving a minimum of 200 feet of unterminated coaxial cable or twisted pair. **Parallel (Optional):** BCD hours, minutes, and seconds, DTL and TTL compatible. **Isolation:** All outputs separately buffered and short-circuit proof.

INPUT POWER
95 to 135 VAC, 48 to 440 Hz, RFI filtered, 25 watts (nominal).

PHYSICAL
Weight: 12 pounds. **Mounting:** Standard 19-inch rack (slides optional). **Size:** 19 inches wide x 3.47 inches high x 15 inches deep. **Temperature:** 0°C to +60°C.

CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKATALOG FÜR ELEKTRONIKER
ELECTRONIC ENGINEERS CATALOGUE

The 1978 edition is out...and the response is in...
IMMEDIATE AND OVERWHELMING

ACCEPTANCE

The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to—and from—Western Europe.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 product headings & cross-references alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

SYNCHRO CONVERTERS — MUX SYSTEMS

	Input Availability	Output	Static Accuracy	Size
TRACKING SYNCHRO/RESOLVER TO DIGITAL Full transformer isolated units with jitter free output.	Freq.: 50 to 1600Hz L-L V_{RMS}: 5 to 90 Ref. V_{RMS}: 10 to 115	Model 1661: 16 bits 1651: 14 bits 1651-B: 12 bits 1651-C: 10 bits	±1′ ±4′ ±8.5′ ±22′	3.1″ x 3.4″ x .82″ 3.1″ x 2.6″ x 0.82″ 3.1″ x 2.6″ x 0.82″ 3.1″ x 2.6″ x 0.42″
AUTORANGING TRACKING S/D. Model 1653 Transformer isolated. Reference and L-L voltages may vary independently of each other.	Ref.: 44-1500Hz Ref. V_{RMS}: 5-125 L-L V_{RMS}: 5-115	12 bits	±6′	3.1″ x 2.6″ x 0.82″
TRACKING S/D WITH BCD OUTPUT. Model 1662 Transformer isolated units with jitter free output.	Ref.: 50-1500Hz Ref. V_{RMS}: 10-115 L-L V_{RMS}: 5-90	4 Decade BCD	±4′	3.1″ x 2.6″ x 0.82″
14 BIT SYNCHRO OR SIN/COS TO DIGITAL. Series 1623F: Includes ±5° offset capability. Can accept FLUX VALVE inputs.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90 Ref. V_{RMS}: 10 to 115	14 bit parallel binary or 4 decade BCD. TTL, DTL compatible.	±4′	3.125″ x 2.625″ x 0.82″
TWO SPEED SYNCHRO-TO-DIGITAL. Series 1512 Combines either binary or nonbinary gear ratios from a two speed system. Only one module required per complete system.	36:1, 18:1, 9:1, 16:1	Up to 19 bits binary parallel.	±0.08′	3.125″ x 2.625″ x 0.82″
MULTIPLEXED SYNCHRO-TO-DIGITAL. Series MUX: Simple, noise immune, small and inexpensive Modular system, up to to 128 channels.	Any combination of Synchros and Resolvers.	14 bits binary parallel 75 μs conversion.	±5′	3.125″ x 2.65″ x 0.82″ + 1.85″ x 0.85″ x 0.82″ per channel
ANGLE POSITION INDICATOR, SOLID STATE. Series 2623: Includes ±5° offset capability. Rugged, compact, accurate and economical. With or without built-in power supplies. Internal reference available.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90 Ref. V_{RMS}: 10 to 115	Readout: 3599, ±179.9 or 9999. Others available.	±0.1°	5.5″ x 1.75″ x 5.5″ deep
SYNCHRO OR SIN/COS TO LINEAR DC. Series K678-1637: Converts synchro or resolver inputs to linear DC output proportional to the angle. Connector termination available. Output voltage may be offset.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90 Ref. V_{RMS}: 10 to 115	±10VDC for angles −180° to +180°.	6′,15′, 30′ or 1°	**K678:** 3.1″ x 2.6″ 0.82″ **1637:** 2.5″ x 3.2 x 0.78″
SYNCHRO/RESOLVER TO SINE-COSINE DC. Series 655/697: Generates sine and cosine DC outputs proportional to the angle.	Freq.: 60 or 400Hz L-L V_{RMS}: 11.8 or 90 Ref. V_{RMS}: 26 or 115	−10 volts to +10VDC, representing the sine and cosine of the input angle.	±6′	400Hz: 1.85″ x .85″ x .82″
SYNCHRO TO SINE-COSINE DC (non-variant). Series 655NV: Generates sine and cosine DC outputs proportional to the input angle. Insensitive to synchro reference and line voltage. Ideal for displays.	Freq.: 60 or 400Hz L-L V_{RMS}: 11.8 or 90 Ref. V_{RMS}: 26 or 115	−10 volts to +10VDC representing the sine and cosine of the input angle.	±6′	3.44″ x 3.19″ x 0.82″
DIGITAL TO SYNCHRO/RESOLVER, Series 1667:	16 bits LPTTL, levels binary coded angle.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90	±1′	3.125″ x 3.625″ x 1″
DIGITAL-TO-SYNCHRO/RESOLVER. Series 1673: Miniaturized, 1.5 VA, short circuit proof. 0.1% Max. amplitude variation.	14 bits, LPTTL levels binary coded angle.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90	±4′ ±12′	3.125″ x 2.625″ x 0.82″
DIGITAL-TO-SYNCHRO/RESOLVER, Series A1670: Drives 3 TR's High power, solid state device converts a 14 bit input into either a 3 wire synchro or 4 wire resolver output. Overload and short circuit protected.	14 lines representing angles 0 to 360°	L-L V_{RMS}: 11.8 or 90 Ref. V_{RMS}: 26 or 115 Freq.: 60Hz or 400Hz	±4′	PC: 4.5″ x 8″ x 0.875″
ACP TO SINE/COSINE DC (non-variant). Series 1502: Model 1502-1 is ACP to Synchro.	4096 ACP & 1 ARP	±10VDC, as the sine and cosine.	±5′	3.1″ x 3.5″ x .82″
DIGITAL TO SINE COSINE DIGITAL. Series 1500: Model 1500-1 has tristate outputs and MUX sine and cosine over 12 lines.	14 lines representing angles 0 to 360°.	12 bits sine and cosine, also quadrant signs.	±2′	3.0″ x 4″ x 0.4″
DIGITAL TO SINE COSINE DC (non-variant). Series 1501: 0.05% max. amplitude variation.	14 lines representing angles 0 to 360°.	±10VDC, as the sine and cosine.	±4′ or ±15′	3.125″ x 2.625″ x 0.82″
DIGITAL-TO-RESOLVER. Series 1503: 0.035% max. amplitude variation.	14 lines representing angles 0 to 360°.	2 AC voltages, 20V P-P, as the sine and cosine.	±4′	3.125″ x 2.625″ x 0.82″
CONTROL TRANSFORMER, SOLID STATE. Series 1682: Fully transformer isolated unit. 0.035% max. amplitude variation.	Synchro and 14 bits Natural parallel binary.	±5 V_{RMS} representing ±12.5°.	±4′	3.125″ x 2.626″ x 0.82″
CONTROL DIFFERENTIAL TRANSMITTER, SOLID STATE. Series 1681: 0.035% max. amplitude variation.	Synchro and 14 bit Natural parallel binary.	6.5 V_{RMS}, sine/cosine.	±4′	3.125″ x 2.625″ x 0.82″
SINE-COSINE TO SYNCHRO DRIVERS. Series B676: Solid state device designed to handle large current surges of TR's. Will drive three 11TR4s to a low null. Overload and short circuit protected.	±10VDC, representing the sine and cosine of the required angle.	L-L V_{RMS}: 11.8 or 90 Ref. V_{RMS}: 26 or 115 Freq.: 60Hz or 400Hz	±10′	PC: 4.5″ x 8.0″ x 1″
LINEAR DC TO SINE-COSINE DC. Series C670: Converts a D.C. voltage, representing an angle, into two output voltages that are proportional to the sine and cosine of that angle.	±10VDC representing angles from −180° to +180°	K sin θ and K cos θ K = 10VDC	±10′	3.44″ x 3.19″ x 0.82″
COORDINATE ROTATOR. Series A689: Rotates (X-Y) coordinates proportional to a linear DC input.	X = R cos θ Y = R sin θ R = ±10VDC	R sin (θ + β) R cos (θ + β)	±10′	3.19″ x 3.44″ x 0.82″
POLAR TO RECTANGULAR. Series A1618: Converts polar coordinates (R, θ) into rectangular (X, Y).	R: ±10VDC θ: ±10VDC	X = R cos θ, Y = R sin θ R = ±20MV to ±10VDC	±10′	3.19″ x 3.44″ x 0.82″
RECTANGULAR TO POLAR. Series 695: Converts rectangular coordinates (X, Y) into polar (R, θ).	X = R cos θ Y = R sin θ	R = $\sqrt{X2 + Y2}$ θ = $\tan^{-1}$ Y/X	±10′	3.19″ x 3.44″ x 1.78″
COMPUTING DEMODULATORS. Series 840, 854: Fully isolated. Proportional phase sensitive bipolar output.	840: 0 to 5 V_{RMS} 854: 0 to 20 V_{RMS}	0 to ±4.3VDC 0 to ±10VDC	0.1% 0.1%	1.63″ x 1.0″ x 1.0″
DUAL CHANNEL PHASE SENSITIVE DEMODS. Series 9318 Ideal for resolver demodulation.	0-115V_{RMS}, 400 Hz, 60Hz available	±10VDC	0.1%	3.1″ x 1.9″ x 0.5″

Other frequencies and voltages available. Units available for either 0 to +70°C or −55°C to +105°C operation. Most units are hermetically sealed for extra protection.

VERNITECH

Synchro Conversion Modules & Systems

Synchro/Resolver-to-Digital Converters

Model	Hz	Synchro Input (V)	Reference Voltage	Output	Resolution (Arc-Minutes)	Accuracy (Arc-Minutes)	Tracking Speed (°/Sec-Min)
VSD-401-SM	400	11.8	26	14 Bit	1.32	4′ ±0.5 LSB	1440
VSD-409-SM	400	90	115	14 Bit	1.32	4′ ±0.5 LSB	1440
VSD-609-SM	50-60	90	115	14 Bit	1.32	4′ ±0.5 LSB	720

1. Available in 10 or 12 bit modules and PC board configurations
2. 2 speed and multiplexed designs available
3. Module size: 2.625 x 3.125 x .82

FEATURES
- ±4 minutes or ±0.5 LSB accuracy
- 14 Bit or 1.32 minutes resolution
- Standard DC power requirements +5V & ±15V
- PC board compatible
- No field adjustments required
- Inhibit and converter busy signals

Digital-to-Synchro/Resolver Converters

Model	Hz	Synchro Input (V)	Reference Voltage	Load Capability	Accuracy
VDS-401-SB-2	400	11.8	26	2VA	±6 minutes
VDS-409-SB-2	400	90	115	2VA	±6 minutes
VDS-609-SB-2	60	90	115	2VA	±6 minutes
VDS-401-SM	400	11.8	26	100 ohms L-L Balanced	±4 minutes
VDS-409-SM	400	90	115	5kohms L-L Balanced	±4 minutes
VDS-609-SM	60	90	115	4kohms L-L Balanced	±4 minutes

1. D/S output drive capability to 20 V.A. available

FEATURES
- PC board compatible
- High reliability
- Low cost
- Operating temperature: 0°C to +70°C

Angle Position Indicator

Model Number	Input	Hz
VNS-104-401	11.8V Synchro	400
VNS-104-409	90V L-L Synchro	400
VNS-104-609	90V L-L Synchro	60

The VNS-104 Angle Position Indicator is a Synchro-to-Digital Converter with a DTL/TTL compatible BCD ouput. These units are self contained including an integral power supply and a high intensity digital display. The VNS Series units are economically priced and feature variable range scale settings to allow for the display of physical units of measurement such as temperature, weight, and distance. The readout displays either zero to full scale or ± full scale.
Package size: 3¾ x 2$\frac{5}{32}$ x 6$\frac{1}{16}$.

FEATURES
- DTL/TTL compatible BCD output
- High reliability
- Settable range scales
- Built-in Power Supply
- Low cost
- CMOS circuitry

Special Converters

Synchro-to-BCD and Resolver-to-BCD Converters

Sampling Type

Model	Hz	Synchro Input (V)	Reference Voltage	BCD Output	4-Digit Accuracy	3-Digit Accuracy	Sample Rate
VSD-401-SM-D-002	400	11.8	26	359.9 (4)	±6′ ±1 LSB	±30′ ±1 LSB	40/sec
VSD-409-SM-D-002	400	90	115	359.9 (4)	±6′ ±1 LSB	±30′ ±1 LSB	40/sec
VSD-609-SM-D-002	50-60	90	115	359.9 (4)	±6′ ±1 LSB	±30′ ±1 LSB	40/sec
VRD-401-SM-D-002	400	11.8	26	359 (3)	±6′ ±1 LSB	±30′ ±1 LSB	40/sec
VRD-409-SM-D-002	400	90	115	359 (3)	±6′ ±1 LSB	±30′ ±1 LSB	40/sec
VRD-609-SM-D-002	50-60	90	115	359 (3)	±6′ ±1 LSB	±30′ ±1 LSB	40/sec

FEATURES
- ±6 minutes of arc accuracy
- 4 decade BCD or 6 minute resolution
- Standard DC power requirements +5V & ±15V
- Variable scale converter
- PC board compatible
- No field adjustments required

Tracking Type

Model	Hz	Synchro Input (V)	Reference Voltage	Output	Resolution (Arc-Minutes)	Accuracy (Arc-Minutes)	Tracking Speed (°/Sec-Min)
VSD-609-SM-D	50-60	90	115	0-359.9 BCD	6 (.1°)	±6′	180
VSD-401-SM-D	400	11.8	26	0-359.9 BCD	6 (.1°)	±6′	360
VSD-409-SM-D	400	90	115	0-359.9 BCD	6 (.1°)	±6′	360

Synchro-to-Linear DC

Model	Hz	Synchro Input (V)	Balanced Load	Input Rates
VSDC-401-SM	400	11.8	15k	720°/sec
VSDC-409-SM	400	90	750k	720°/sec
VSDC-609-SM	60	90	200k	100°/sec

FEATURES
- ±6 minutes accuracy
- Infinite resolution
- High stability - minimum drift
- PC board compatible
- Low cost
- CMOS circuitry

Synchro-to-Sin-Cosine DC

Model	Hz	Synchro Input (V)	Balanced Load	Reference Input	Input Rates
VSSC-401-SM	400	11.8	10k	26V @ 5mA	360°/sec

AirBorn connectors

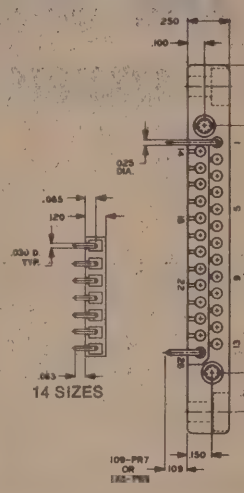
AirBorn Connectors for PC Card to Chassis or Mother Board Connections

Two series of subminiature, right-angle .030″ dia. BeCu pin to socket connectors.

Series WT: Single-row connectors on .100″ centers.

Series WTB: Double-row connectors on .100″ centers, offset .050″. Three or six 50-ohm Coax available with 20-contact connectors.

Terminations: Soldercup, wave solder, Wire-Wrap*.



Contacts	Length Overall
10	1.350
14	1.550
20	1.850
24	2.050
26	2.150

AirBorn Connectors for PC Board Input-Output, Cable to Panel and Cable to Chassis Connections

Series WTA: Subminiature, rectangular plug and receptacle, .100″ centers, two rows offset .050″, .030″ dia. BeCu contacts.

Terminations: Soldercup, wave solder, and Wire-Wrap*.

Series WTD: Subminiature, rectangular plug and receptacle, .100″ centers, two rows offset .050″, .030″ dia. BeCu contacts.

Terminations: Crimp Removal Socket.

HIGH VOLTAGE

ALDEN, the pioneer in "IMI" integral molding techniques, provides high-reliability, high-quality disconnects at low cost for HV applications up to 50 KVDC. Select from an extensive range of connectors for virtually every HV requirement.

WE SPECIALIZE IN CUSTOM MOLDED CONNECTORS

TUBE CAP

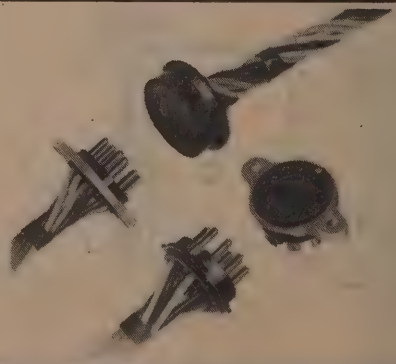
Corona, high voltage and temperature problems associated with power and flash tubes are reliably solved with **ALDEN's** broad range of tube cap/flash tube connectors. A wide variety of styles and material options are available.

CRT CONNECTORS

High-reliability sockets for most popular CRT's. Exclusive floating contacts assure perfect mating every time, self-lock when plugged. Both pre-wired and solder-lug contacts available.

ASSEMBLED PLUGS AND CONNECTORS

Low-cost solutions to your interconnect requirements. A large variety of plugs, connectors, and sockets are available for your selection, including panel mounts, solder-tabs, pre-wired, miniature and shielded.



ALDEN PRODUCTS COMPANY

BROCKTON, MASSACHUSETTS 02403
CONNECTOR SYSTEMS

ALLIED SYSTEMS CORPORATION

Patchboard Programming Systems

Allied Systems now offers two complete lines of patchcord programming systems, with more than twenty-one sizes available. Allied also supplies associated patch cords and hardware for both lines.

Catalog 567 covers IBM style systems which normally have a contact spacing of .250 X .281 or .281 X .281. These systems use larger taper pins for rear panel wiring.

Catalog 667 covers hook type systems which have a contact spacing of .250 X .250. These systems are available for taper pin, wire wrap or locking latch type rear panel wiring.

Patch cords are available in a variety of types: single conductor, coax, two conductor shielded, etc., to fit any programming requirement.

Thirteen sizes of *fixed* programming systems are available in both types of systems, ranging in size from 200 to 3264 contacts.

The extremely competitive pricing of the Allied Systems lines, plus the unexcelled quality of their products, gives you, the user, a competitive edge in the design and pricing of your system.

Call your nearest Allied Rep. or Home Office for application help in using Allied Systems patch panels and programming systems, or for prices.

High-voltage connections

Military interconnections

- Hermetically sealed and corona-resistant
- Space saving — maximum performance from the minimum size and weight
- Wide temperature range: −55°C to +125°C (−67°F to −257°F)
- Voltage ratings: to 150,000 volts DC
- High altitude operation — up to 70,000 feet without voltage derating
- Insulation: extruded silicone rubber
- Lead wire remains flexible from −62°C to +250°C
- Receptacles: glass epoxy
- High reliability — operate under extreme environmental conditions
- Color coded for easy identification
- Excellent mechanical strength — resistant to vibration and shock
- High dielectric strength
- Fungus, moisture, oil and chemical resistant
- Radiation resistant
- Positive mating of lead into receptacle
- RFI shielding — optional
- Preassembled — no tools required
- Versatile — top access, splice or bulkhead application
- Meet applicable military specifications

No exposed high voltage, the contacts are deeply recessed. And we've designed corona right out. With our LGH interconnection devices, in fact, it's safety all the way.

Safety — with many pluses. Such as compactness, light weight, quick connect/disconnect, great reliability.

Which is exactly what you'd expect from the people with the broadest line of high-voltage connectors, lead assemblies and receptacles. The specialists in custom design to a system. The company with the most experience — the

–safe and sure, from AMP.

only one that covers both military and commercial markets with specialized designs for each.

Take a good look at these key product features. They add up to a lot of reasons why a lot of people rely on AMP for their interconnection needs. And why you should, too.

For all the reasons,
call 717-367-1105.
Or write AMP Incorporated,
Capitron Division,
Elizabethtown, Pa. 17022.
TWX 510-657-4561.

Commercial interconnections

- The right balance of characteristics to solve high-voltage carrying problems at lowest applied cost
- Designed specifically for commercial application in industrial environments, and to meet large-volume production requirements
- Voltage ratings: to 8 KVAC, rms, 60 Hz; to 20 KVDC
- Temperature range: rated for operation within −15°C to +85°C
- Altitude operation — rated from sea level to 10,000 feet
- Safety construction — UL recognized, 94V-0 rated plastic material
- Exceed minimum creepage and clearance for specified voltages per applicable International Specifications
- Available with or without leads
- Crimp, snap-in contacts rated at 7.5 amperes
- Pins and sockets accept #22-20 AWG and #18-16 AWG wire
- Machine applied terminations assure lowest applied cost

AMP has a better way.

AMPHENOL CONNECTORS

BUNKER RAMO

AMPHENOL NORTH AMERICA
Bunker Ramo Corporation

A few of our many quality connectors for your interconnection needs

RACK-AND-PANEL CONNECTORS

Amphenol Min Rac 17® Series Connectors

- Fixed or removable contacts
- 9 to 50 contacts, choice of arrangements and dielectrics
- Intermates with all "D"-shaped subminiatures

Poke Home | Encapsulated & Rear Release | Fixed Contact | Power & Coax | Solderless Wrap

Amphenol 32 Series Connectors

- Drop in for fast, soldered P.C. headers
- Standoffs for easy flux cleaning
- 32 Series Fire-Plug™ connectors for flame-hazard applications (classified UL 94V-0)
- 32 Series Econo-Plug™ connectors for less critical applications
- 2, 3, 6, 9, 12, or 15 contacts
- Panel mount with fingertip latching and cable-to-cable mounts also available

CABLE ASSEMBLIES

- Multi-conductor cables made to rigid quality control standards, automatically inspected
- Harness assemblies made as engineering prototypes or high-volume complex systems. Satisfy optimum reliability requirements and stringent environmental specs

Amphenol Micro Rac® 220 Series Connectors

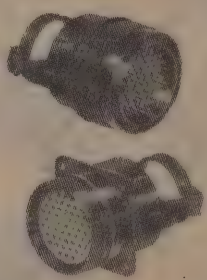
- Low-cost, high contact density
- Mono-block construction, polarized mating
- 52 and 104 contacts, float-mounted

Amphenol Micro-Pierce® 157 Series Connectors

- Float-mounted for easy mounting above or below panel
- 24 and 26 AWG solid conductors
- Gold-plated contacts, fiberglass-filled polyester dielectric
- Polarized mating, 14 to 64 contacts

POWER CONNECTORS

Amphenol 48 Series Miniature Connectors



- Qualified to MIL-C-26500, Rev. "E"
- Lightweight, easy-to-assemble with crimp-removable contacts
- Bayonet or threaded couplings, power and shielded contacts
- 30 insert arrangements, size 8 through 24

Amphenol 44 Series Waterproof Connectors

- Resilient, one-piece body resists abrasion; impervious to water, lubricants, fuel, ozone, or road salts
- Environmentally sealed to prevent liquid entry
- Low first cost, low maintenance costs
- Simple, positive push-pull connect/disconnect

BUNKER RAMO

AMPHENOL NORTH AMERICA
Bunker Ramo Corporation

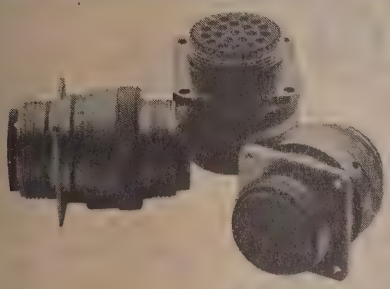
AMPHENOL CONNECTORS

POWER CONNECTORS

Amphenol 97 Series Circular Connectors

- Factory-aligned, non-rotating contacts for easy soldering
- Diallyl-phthalate inserts give high insulating resistance and dimensional stability
- Molded barrier between each contact for increased voltage rating

Amphenol Miniature Environmental Connectors



- 118 Series qualified to MIL-C-26482/Series 2
- 418 Series qualified to MIL-C-38999/Series I and II
- 518 Series qualified to MIL-C-83723/Series III
- All three series preferred under MIL-STD-1353A
- All with molded polymer retention discs to eliminate troublesome metal clips
- Wide range of shell sizes, insert arrangements, and termination tooling

Amphenol 229 Series Power-Distribution Connectors

- Qualified to MIL-C-22992, Class L
- Preferred under MIL-STD-1353A
- Rugged high-impact aluminum ratings: 40, 60, 100, and 200 amps
- Waterproof, mated or unmated, capped or uncapped
- Recessed socket contact for arc quenching

PRINTED CIRCUIT CONNECTORS

Amphenol 225 Series Printed Circuit Commercial Connectors

- Slotted bellows, wire-wrappable terminations or solder terminations
- Low contact resistance, low-friction mating for repeated insertions
- Wide choice of contact grid positions and terminal configurations

For complete information, technical data dimensions and prices, contact the nearest Amphenol North America sales office or distributor listed in this catalog.

ADAPTERS BETWEEN SERIES

Many different combinations of between series adapters are available. They are of non-constant impedance, but designed so that inherent electrical discontinuities are minimal. We describe an adapter by referring to its own construction. We indicate the specific series involved and the mating configuration of each end of the adapter . . . BNC jack to N plug, for instance. One end of the adapter is a BNC jack. The other end is an N plug. The fact that it joins a BNC plug and N jack is understood.

ADAPTERS / WEATHERPROOF • 50 OHM IMPEDANCE • TFE INSULATION

SMA SERIES COAXIAL CONNECTORS

SMA's are 50 ohm semi-precision sub-miniature (3mm), high-frequency (0-18 GHz) connectors with ¼-36 threaded coupling. They meet all MIL-C-39012 requirements for SMA connectors and are available in gold plated stainless steel, beryllium copper or stainless finish where indicated.

● Accommodates Cable Diameter
▲ Use with Tool Handle 227-944, Cavity A
□ For Stainless Finish Ad SF to Amphenol Number Suffix
△ Preferred Dismountable Coupling Nut Design Allows Precise Trimming After Soldering
■ Overall Length Includes Heat Shrink Tubing Supplied.

AMPHENOL CONNECTORS

BUNKER RAMO

AMPHENOL NORTH AMERICA
Bunker Ramo Corporation

BNC SERIES COAXIAL CONNECTORS

Miniature in size and light in weight, the BNC is characterized by its two-stud quick disconnect bayonet lock coupling arrangement. They function well to 11 GHz and are available in a wide selection of configurations for all popular cables.

AMPHENOL CONNECTORS

N SERIES COAXIAL CONNECTORS

Series N connectors are medium size weatherproof, threaded coupling units with a frequency limit of 11 GHz. They have a peak voltage rating of 1500 volts and are impedance matched to either 50 or 70 ohm cables as listed. Cable affixment methods include crimp, clamp and solder-type.

AMPHENOL CONNECTORS

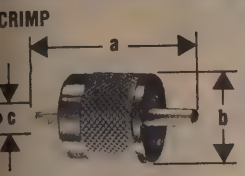
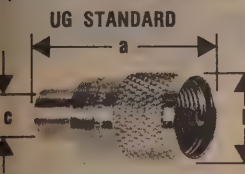
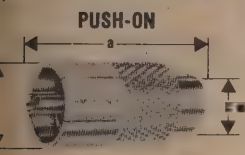
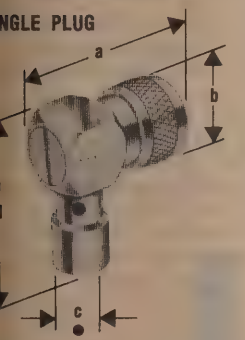
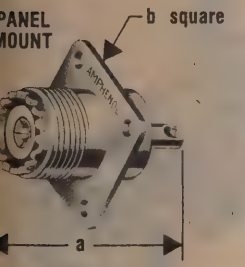
UHF SERIES COAXIAL CONNECTORS

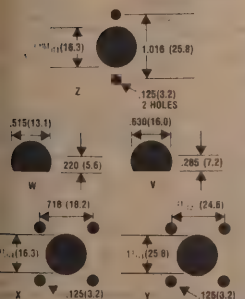












Threaded coupling UHF series are low-cost, general purpose connectors for lower frequency applications up to 500 MHz. Both threaded and push-on mating are available with Braid-solder, solderless clamp, hex crimp and the new FCP style cable affixment which requires no special tools.

TOOLS

TWIN-HEX CRIMP TOOL SYSTEM

APPLICATION NOTES

Amphenol has introduced a new concept in cable-connector assembly tools, consisting of a universal tool frame with interchangeable crimping dies selected according to the cable and connector being assembled. A single Twin-Hex tool and one set of dies will crimp the outer ferrule to the cable braid and the center contact to the center conductor of the cable. With a few additional die sets, a wide variety of diameters can be crimped.

Die sets are easily interchanged. They are designed so there is no confusion regarding proper orientation. For permanent installation, a set of roll pins is included with each die set. Complete instructions are supplied.

HOW TO ORDER

Twin-Hex tool frame 227-944 is purchased separately. Select the die set required for your application from the table below and order by Amphenol Die Set number. (Hex size dimensions are listed for reference only.) Die sets are stamped with the Military number on one side and the Cavity designation on the reverse side. (Cavity A crimps outer conductor and Cavity B crimps inner conductor.)

TERMINAL JUNCTION SYSTEM MODULES (MIL-T-81714)

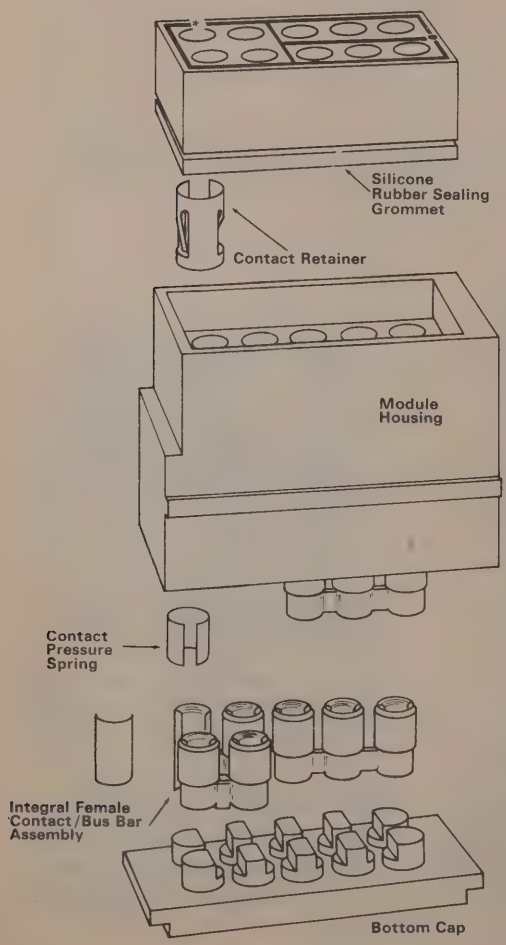
Appleton electronics division
ELECTRIC COMPANY
DEPT. EM / 2205 12th AVENUE / SOUTH MILWAUKEE, WISCONSIN 53172 / (414) 764-7200

Terminal Junction System Modules — QPL Approved in accordance with MIL-T-81714 Contacts are approved to MIL-C-39029. Appleton terminal junction system modules are available in feedback and feedthru types, sizes 16, 20, and 22, with a full selection of bussing arrangements. Several mounting track variations are also available. An Appleton exclusive, total peripheral pin-to-socket surface contact and one-piece contact/bus design, provides superior electrical characteristics.

INSIDE THE APPLETON TERMINAL JUNCTION MODULE

The most important element in a terminal junction system is the **terminal junction module.** It is here that environmental conditions are overcome, margins for error are reduced, versatility is the highest, and the most important, reliability is, above all, achieved.

To attain these goals, the Appleton terminal junction module embodies several outstanding advantages. The exploded view below shows you how these advantages work.



SPECIFICATIONS FOR APPLETON TERMINAL JUNCTION SYSTEMS

Insulators: Glass-filled, flame-retardant thermoset plastic. **Contacts:** Copper alloy, plated with gold per MIL-G-45204. **Wire-Sealing Grommets:** Silicone rubber. **Tracks:** Aluminum alloy, anodized per MIL-A-8625. **Hardware:** Non-magnetic stainless steel passivated. **Sealing Plugs:** Teflon®. **Applicable Specifications:** Appleton Terminal Junction Modules, Splices, and Track Assemblies meet or exceed the electrical, mechanical, and environmental requirements of MIL-T-81714. **Contact Resistance:** Appleton's unique peripheral surface contacts exhibit millivolt-drop readings consistently BELOW the range specified in MIL-T-81714. **Reproducibility:** Appleton contacts are made from uniform half-cylinders, gold-plated after forming, and joined by a pressure spring, they are remarkably free of performance variations. From contact to contact, and from module to module, critical performance characteristics are highly reproducible.

WIRE RANGE ACCOMMODATIONS

Module Size	Conductor Size, AWG	Module Size	Conductor Size, AWG
22	26 24 22	16	20 18 16
20	24 22 20	12	14 12

CLASSIFICATION

Class A 150°C max. Environmental type, limited fluid resistance.
Class B 175°C max. Environmental type, extended fluid resistance.
Class C 200°C max. Environmental type, limited fluid resistance.

ORDERING INFORMATION

To order an Appleton Terminal Junction System:

1. Choose the basic size: 20, 22, etc.
2. Choose the class: A, B, C.
3. Choose the bussing arrangement in relationship to the class designation.
4. For example: Size 20 module, Class C, all common bus order, 420120-101 (reference M81714/2-CA1).

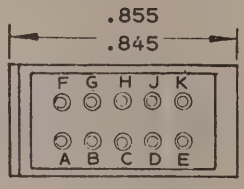
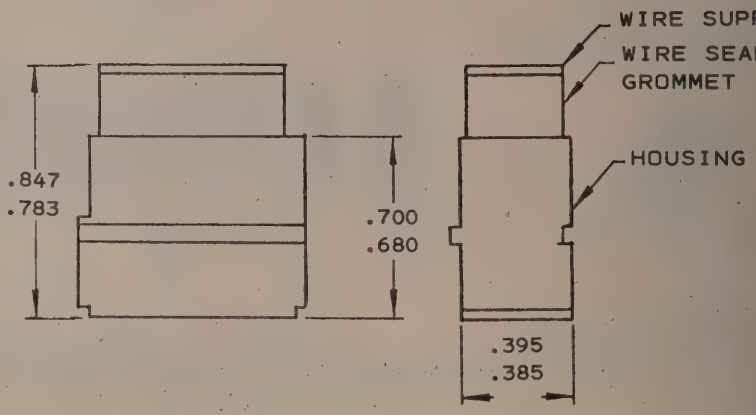
MODULES ACCOMMODATE UP TO THREE RCR07 ¼ WATT RESISTORS, 1N2071 DIODES, OR ONE CAPACITOR





This new series of terminal junction modules feature internal resistors, diodes, and capacitors with no increase in size over standard MIL-T-81714 terminal junctions. The specific modules are used for balancing unmatched impedance values incurred when using various electronic components.

These terminal junction modules also feature a rigid wire support which allows severe bending of wires without opening wire seals of the silicone rubber grommet. All components are welded to the field-proven socket contact design developed for the MIL approved modules.

These modules can be mounted in the standard feedback track (see Appleton Terminal Junction Module page). Listed below are several available schematic diagrams and their respective value designations.

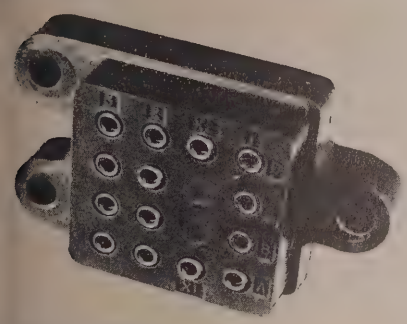
RELAY SOCKETS (MIL-R-6106)

Appleton relay sockets for MIL-R-6106 relays are available in many configurations with a full range of standard styles with fixed and removable closed-entry socket contacts. The low profile designs can be mounted from the top or bottom of the panel. Appleton relay sockets provide numerous variations of polarization; and possible terminal styles include: crimp removable, solder pot, pierced tab, turret lug, dip solder, and wire wrap.



APPLICATION

Appleton relay sockets can be used in conjunction with airbourne and shipboard equipment, plus any and all industrial electronic equipment utilizing MIL-R-6106 electro-mechanical relays and commercial relays having the same interface design.

APPLETON FEATURES

- Low Profile Design
- Closed Entry Socket Contacts
- Bottom and Top Mounting Versatility
- Positive Polarization
- Unique .200 Grid Pattern
- Plus a wide variety of contact termination possibilities: solder pot, pierced tab, turret lug, dip solder, wire wrap.

PERFORMANCE

Appleton connector assemblies meet the requirements of NAVORD 3020237.

MATERIALS

Insulators: Dialyl Phthalate Type SDG-F Per MIL-M-14 color Green.
Contacts: Copper Alloy — Gold Plated Per MIL-G-45204
Contact Hood: Stainless Steel 300 Series
"C" Ring — Contact Retainer: Stainless Steel Per MIL-S-7720

Mounting Hardware:
Stud: Stainless Steel per MIL-S-7720
Spacer: Stainless Steel per MIL-S-7720
Washer: Stainless Steel Per MIL-S-7720
Hex Nut: MS 21043-06

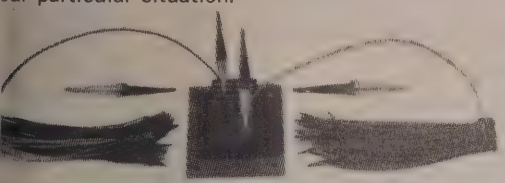
FEEDTHRU TYPE

TERMINAL BLOCKS

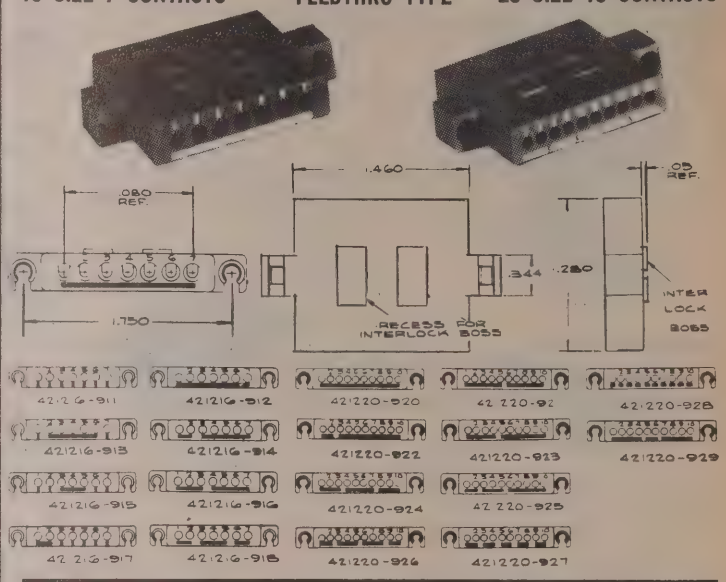
ppleton Programming Terminal Blocks are offered n Feedthru and Feedback types to provide electrical ontinuity program bussing for input/output as re-uired for your application. Size 16 blocks (color oded blue and rated at 13 amps) accept 16, 18, and 0 AWG stranded wire, and provide up to 15 contacts er square inch. Size 20 blocks (color coded red, ated at 7.5 amps) accept 20, 22, and 24 AWG tranded wire, and provide up to 21 contacts per quare inch. Appleton Programming Terminal Blocks re available for plate mounting; call or write Apple-on's quality engineering staff for assistance in order o meet your various application problems. They will ollow your designs or develop mounting plates for our particular situation.



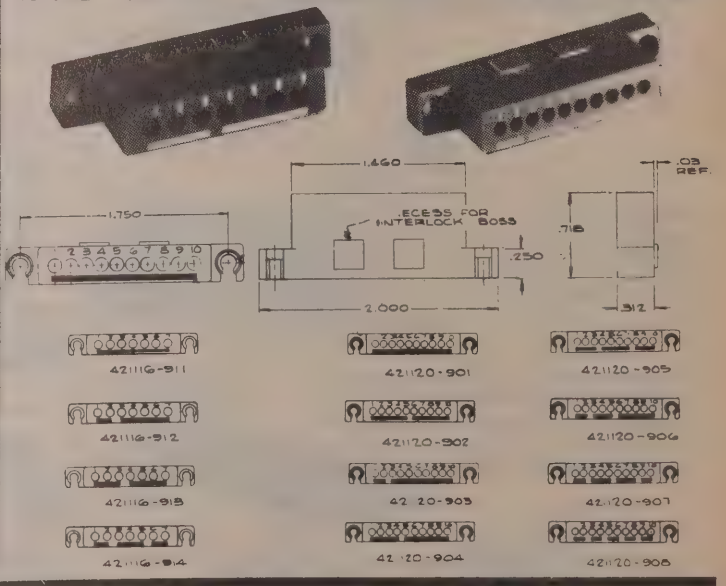
EASY INSERTION/REMOVAL OF PIN CONTACTS

tandard plastic tool permits simple insertion or emoval of pin contacts for disassembly or program-ing circuit changes without disturbing other pro-ram functions. Highly reliable crimp wire termina-on pin contacts are used. Crimping is accomplished ith standard industry-accepted manual or semi-utomatic tools.

16 SIZE 7 CONTACTS FEEDTHRU TYPE 20 SIZE 10 CONTACTS



16 SIZE 7 CONTACTS FEEDBACK TYPE 20 SIZE 10 CONTACTS



FEATURING

1. CRIMP SCREW MACHINE CONTACTS

) Accepts MIL-C-39029/1 Pin Contacts
) Rear Release Removable
) MIL-C-83723/31 Contact Insertion/ Extraction Tool

. INTERNAL BUSSING

) One Piece, Contact and Buss Insures Low, Constant Millivolt Drop
) Bussing Combinations to Suit Your Needs

3. CONNECTOR SIZES

A) 16 Size Color Coded Blue Available in Feedback and Feedthru Design, Includes 7 Contacts
B) 20 Size Color Coded Red Feedback and Feedthru Design Includes 10 Contacts
C) 12 Size Color Coded Yellow Feedback and Feedthru Design Includes 5 Contacts

4. MOUNTING

A) Two 4-40 Screws are Required for Mounting
B) Snap-on Mounting Feature
C) Interlocking Bosses and Recess for Polarizing and Stacking

5. APPLICATION STANDARDIZATION

The Low-cost Terminal Blocks are Designed to Use the Same MS-39029/1 Pin Contact, MIL-T-22520 Crimping System and MIL-83723/31 Insertion Removal Tools used in the Sophisticated Military MIL-T-81714 Terminal Junction System. Appleton is also a Major Supplier of MIL-T-81714 T.J.S.

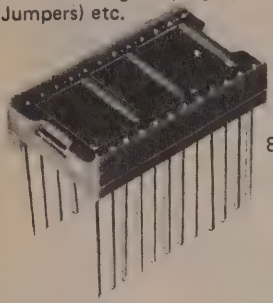
DIP Sockets,

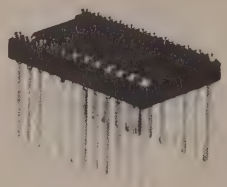
DIP SOCKETS—6 STYLES

DIP SOCKETS

For mounting IC's, logic jumpers (see DIP-R-LOGIC Jumpers) etc.

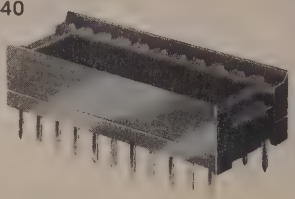


SERIES 501
Wire Wrap* Type Pins with Aries bifurcated contacts.
Available:
8-10-14-16-18-20-22-24-28-32-36-40 Pins on .200, .300, .400 and .600 centers.



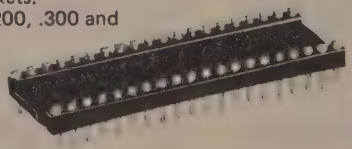
SERIES 503
Lo-Profile Sockets—Wire Wrap Pins with collet style contacts.
Available: 2 to 40 pins in increments of 2 on .300 or .600 centers.
64 pins on .900 centers.

SERIES 511
Solder Type Pins with Aries bifurcated contacts.
Available:
8-10-14-16-18-20-22-24-28-32-36-40 Pins on .200, .300, .400 and .600 centers.



SERIES 512
Lo-Profile Sockets with Aries bifurcated solder type pins.
Available: 8-14-16-24 Pins on .300 and .600 centers.

SERIES 513
Lo-Profile Collet Style Sockets.
Available 6 to 40 pins on .200, .300 and .600 centers.
64 pins on .900 centers.



SPECIALS: POLARIZED HEADER & SOCKET
For perfect mating of Header & Socket

SERIES 5118 Polarized Socket 14 & 16 pin (Aries bifurcated pins)
SERIES 6008 Polarized Header.

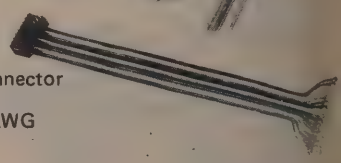
*TM—Gardner-Denver

Complete Information in Catalog 5000.

DIP JUMPERS 10 STANDARD STYLES and SPECIALS

DIP JUMPERS

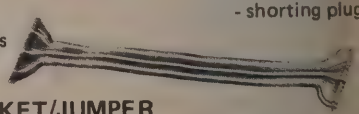
SERIES 100—DIP board to DIP board.
Available: 8-14-16-24 pins.
Any length cable.
Any connector orientation available, 12 standard configurations.



SERIES 112—DIP Extenders
Available: 8-14-16-24 pins.
Any length cable. Various connector orientations (see catalog).
Cable—EIA color coded, 26 AWG (7 strands 34 AWG).
Type B—600 V 105°C.

DECI-CENTER™ JUMPERS

SERIES 150-151 –Available: 8-14-16-24 pins, socket one end—Deci-center other end.
Any length cable. Cable—EIA color coded, 26 AWG (7 strands 34 AWG).
Type B-600 V 105°C. Two wiring sequences available as standard.

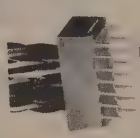


DIP-ER LOGIC™ SOCKET/JUMPER

SERIES 206-207-208

Dip-er Logic Socket Jumpers saves the space on the board for a plug in position and can be used to impose two devices into one position.
Pluggable into standard 8-14-16 and 24 position logic panels.
Any length cable. Cable—EIA color coded, 26 AWG (7 strands 34 AWG).
Type B—600 V 105°C.

TWISTED PAIR JUMPER



Twisted pair jumpers are available with one les number of pairs than the connector number. Example 14 pin jumper is available with either 13 twisted pair all grounds connected to 14 pin, or 7 twisted pairs, a grounds connected to the opposite signal pins 8-14

FLAT CABLE JUMPER

Flat cable jumpers provided as 14 and 16 pin a standards, also available in 8 and 24 pin with flat wi bonded together. Excellent for high flex applicatio or where space is a major consideration. Mo connector orientations available as standar

D TO DIP JUMPERS

SERIES 225
Cable assemblies using "D" Series subminiature connectors (9, 15, 25, 37 and 50 pin) on one end and Aries DIP Headers on other ends. Other end can be furnished stripped and tinned also. Cable is EIA color coded 26 AWG. Other sizes and types of cable can be accommodated.

SPECIALS Aries will promptly respond to your special jumper requirements.

Complete information, Catalog No. 1200-2.

Jumpers, Headers

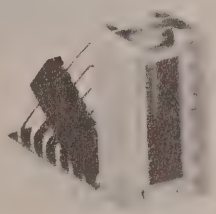
The product listings shown here are abbreviated. Complete data, dimensions and material specifications are available in various Aries catalogs, which have been noted with each listing. Our line of DIP packaging accessories is extremely broad and we urge you to contact the factory or our sales representative in your area. Your inquiries will receive our prompt attention.

VERTISOCKETS
22 STYLES and SPECIALS

ERTISOCKETS™

or mounting LED Displays, Switches, est Points. A complete line—from 2 pin r decimal to 40 pins for multiple splays.

vailable for vertical, horizontal or edge rd displays with optional mounting ngles of 30°, 45°, 60° or 90°. Device ounting centers .200, .300 and .600.

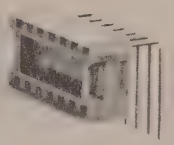


VERTICAL MOUNTING

ERIES 2810—Available: 8-10 Pin Aries bifurcated pins) on .200 centers.
ERIES 810—Available: 8-14-16 Pin Aries bifurcated pins) on .300 centers.
ERIES 6810—Available: 8-10-14 Pin Aries bifurcated pins) on .600 centers.

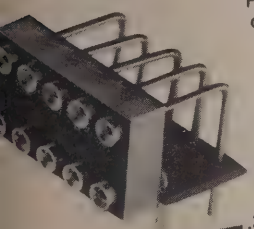
HORIZONTAL MOUNTING

ERIES 2820, 2822 and 823—Available: 8-10 Pins (Aries ifurcated pins) on .200 centers.
ERIES 820, 822, 823—Available: -14-16-18 Pins (Aries bifurcated pins) n .300 centers.
ERIES 6823—Available: 8 to 40 Pins Aries bifurcated pins) on .600 centers.
ERIES 822E (Economy Model)—Available: 8-14-16-18 Pins Aries bifurcated pins) on .300 centers. Note: one row of pins .025 x .006 with ther row .025 sq.



COLLET STYLE VERTISOCKET

For displays using round pins (Solder or Wire Wrap). Excellent for military applications. Can be provided with FR4 base material.



Horizontal

SERIES 2820C, 2822C, 2823C—Available: 8 and 10 pins on .200 centers.
SERIES 820C, 822C and 823C—Available: 8 to 20 pins on .300 centers in increments of two (2).

Vertical

SERIES 2810C—Available 8-10 pins.
SERIES 0810C—Available: 2 pin (for decimal) on .150 center.

EDGE CARD MOUNTING

Mounts on 1/16" p.c. board.
SERIES 2830: 8-10 pin on .200 centers.
SERIES 830: 8-14-16-18 pins on .300 centers.
SERIES 6830: 8-10-14-16-18-24 to 40 pins on .600 centers.

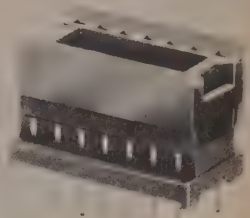
PECIAL COLLET STYLE ERTISOCKETS

o specification are also available.

omplete information in Catalog 8000A

ELEVATOR SOCKETS

Useful to bring device to level required. Available from ¼" to 1¼" high. Standard heights in stock; specials 3 weeks.

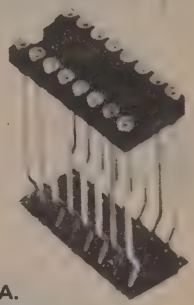


SERIES 8XXX (XXX=height)

Available: 14 pin (Aries bifurcated pins) on .300 centers.

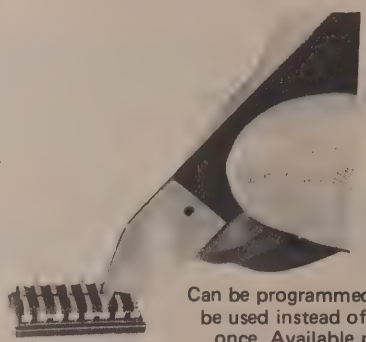
COLLET STYLE CONTACTS

Any height up to 1.150"
2 thru 20 pin on .300 centers
2 thru 40 pin on .600 centers
Specials to any height with no tooling charge. Can be supplied in single pin line to accommodate large LCD, alpha numeric displays and displays that include electronics.



Complete information in Catalog 8000A.

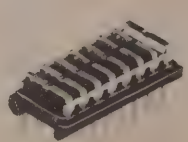
DIP PROGRAM HEADERS AND COVERS



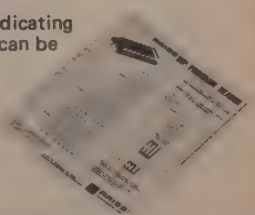
DIP PROGRAM HEADERS AND COVERS

SERIES 675—Available: 2-4-6-8-10-12-14-16-18-20 Pin on .300 centers.

Can be programmed within header itself. Can be used instead of DIP Switches that are set once. Available pre-programmed or can be programmed by customer with needle nose pliers or Aries Program Header tool.



Spec. Sheet 6700 also available for indicating program desired so Program Headers can be furnished pre-programmed.



Complete information on Spec. Sheet 6750.

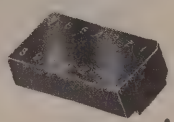
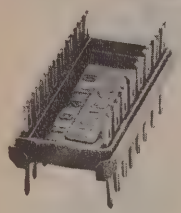
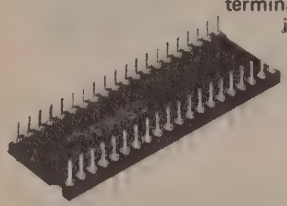
DIP HEADERS and COVERS 5 STYLES and SPECIALS



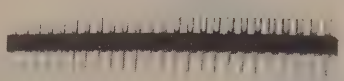
DIP HEADERS & COVERS for mounting components.
SERIES 600 with coined contacts. 2 Styles of Terminals: Post and Fork. Available: 2-8-14-16-24 pins on .300 & .600 centers. Contact styles shown below.



SERIES 625 with screw machine terminals. 5 Styles of Terminals. Available in 23 to 40 pins—each available on .200, .300, .400 and .600 centers.
SERIES 8625 with screw machine terminals. Available in 14-16-18-32 pins in single and double rows on .800 centers. Terminal styles shown below.

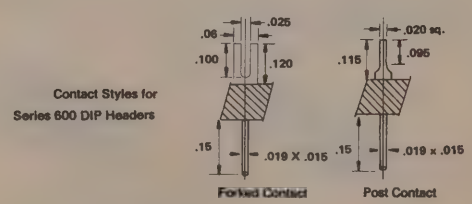


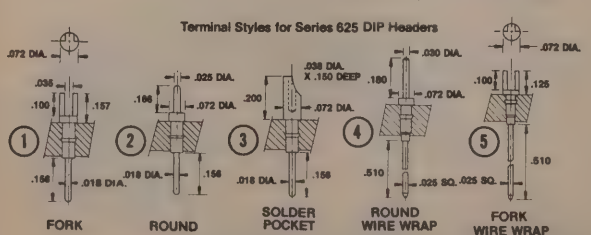
SERIES 650 COVERS: FOR HEADERS
Available for 8-14-16-24-40 pin sizes to accept components of 1/8", 3/8", 1/2" or 3/4" high.



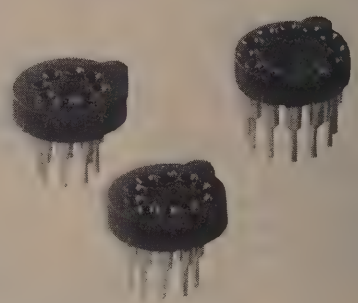
SERIES 0600 and 0625 Pin Line Headers
A single header strip both end and side stackable on .100 centers. (0600 with coined contacts) (0625 with screw machine terminals). Available: 1 to 25 pins on .100 centers.

Complete information:
Catalog 6000-2.

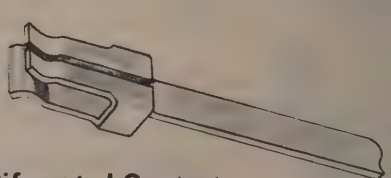




TO SOCKETS



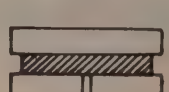
D Series 514 T O SOCKETS
Available 3, 4, 8 (.200 dia.), 8 (.230 dia.), 10, 12 Pin



Aries Bifurcated Contacts

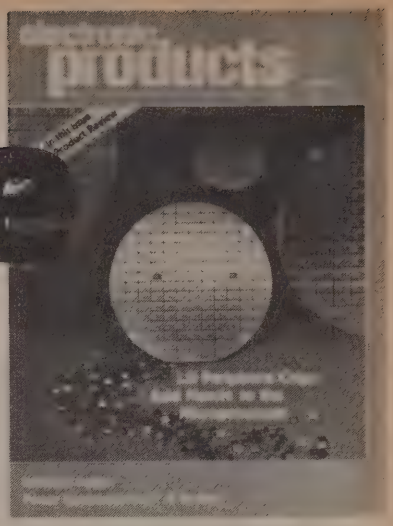
A superior electrical contact as well as firm, physical spring grip. The Aries bifurcated contact has more metal than any other . . . one good reason for its superiority and secure mating.

For round leads
Up to .020 Dia.
Redundant 3 point contact



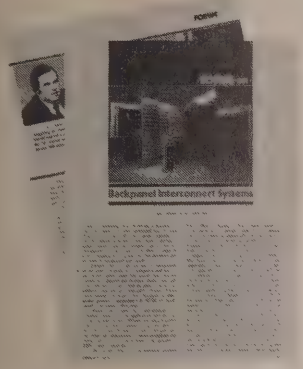
For flat leads
Up to .025 wide
Grips thickness for maximum electrical contact.

stay up to date



SUBSCRIBE TO ELECTRONIC PRODUCTS MAGAZINE. IT'S YOUR *COMPLETE* GUIDE TO EVERYTHING THAT'S NEW IN THE FAST-CHANGING WORLD OF ELECTRONIC PRODUCTS AND SYSTEMS.

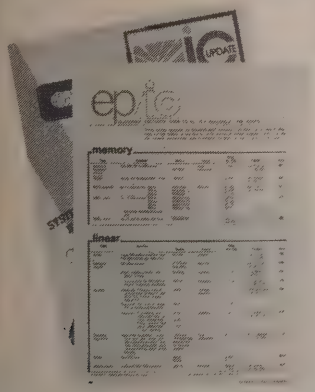
FEATURE STORIES every month on electronic products, applications and availability.



FORUMS—Reports on meetings of manufacturers, users and distributors. Get the very latest news on a wide variety of products.

NEW PRODUCT NEWS—Hundreds of new products are introduced each month. You'll get the facts on not only what the new product is, but also where to get it, basic prices and current delivery.

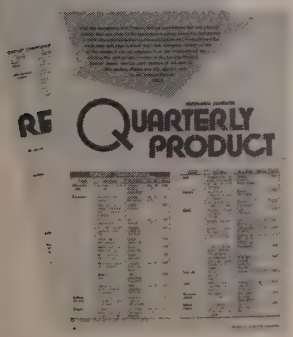
EP/IC UPDATE—Exclusive in ELECTRONIC PRODUCTS. A monthly report on *everything* that's new in the fast-moving world of integrated circuits.



QUARTERLY PRODUCT REVIEW—Another exclusive in ELECTRONIC PRODUCTS. A complete report of *every* new electronic product introduced in the previous quarter. This feature is in the January, April, July and October issues.

QUARTERLY PRODUCT PLANNING DIRECTORY—A compilation of the latest catalogs of a wide variety of electronic products and systems.

OUTLOOK—Important industry news affecting electronic products and systems.



COMPONENT CAPERS—A humorous look at the strange and wonderful world of electronics.

MINI-GLOSSARIES, Quizzes and more—Each and every month for over twenty years the readers of ELECTRONIC PRODUCTS learn something new about the products they work with and specify.

AUGAT® Boards/Accessories

SOCKET/TERMINAL VARIATIONS

Two piece tapered entry socket terminal — four leaf machined closed entry inner contact and machined outer sleeve.

All catalogued boards are supplied with 3 level socket terminals, gold over nickel plated sleeves and contacts.

Any board may be purchased with 2 level socket terminals and optional plating combinations, by adding the proper suffix to the part number, as indicated in the example box below.

SOCKET TERMINAL OPTIONS: For wrap length, plating and replacement parts, see table below.

Example Part Number	Suffix Added to Number	Contact Plating	Sleeve Plating	Socket Terminal Length	Replacement Part Number
8136-PG1-30	None	Gold	Gold	12,95/.510 (3 level)	LSG-1FG1-1
8136-PG1-30-TG	-TG	Gold	Tin		LSG-1FG1-14
8136-PG1-30-2	-2	Gold	Gold	9,40/.370 (2 level)	LSG-1FG6-1
8136-PG1-30-2TG	-2TG	Gold	Tin		LSG-1FG6-14

MATERIALS

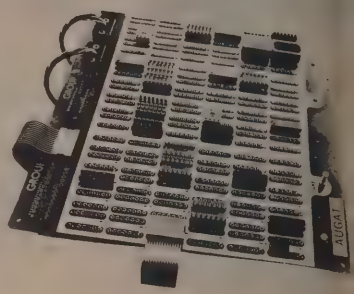
Two-piece, Machined Socket Terminal:
Inner Contact — beryllium copper, gold over nickel plated.
Outer Sleeve — brass, gold over nickel plated or tin over copper plated.

Board: Glass epoxy, 2 oz. copper circuitry, tin plated both sides.

Pins: phosphor bronze, gold over nickel plated.

PATTERNED BOARDS — CLASS 005

P-SERIES

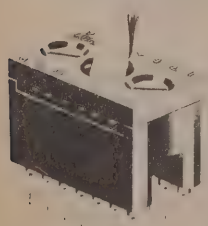


- ⅛" thick board accepts 14 and 16 lead dip I.C.'s.
- Modular Construction — boards may be purchased in multiples of 30 patterns (up to 180 patterns) indicated by suffix number. EXAMPLE: 8136-PG1-90 90 patterns.

See specs. for socket terminal variations.

Part Number	Socket/ Terminals Per Pattern	Voltage & Ground Connections	I.O. Area (for Every 30-Pattern Section)
8136-PG1	14	7 & 14	Socket Terminals (2 Rows of 23)
8136-PG18			Feed Thru Pins (2 Sets: 2 Rows of 13) Total-52 Pins
8136-PG3	14 + 2 (V & G)	V & G Sleeves	Socket Terminals (2 Rows of 23)
8136-PG189			Socket Terminals, High Density (4 Rows of 7)
8136-PG19			Feed Thru Pins (2 Sets: 2 Rows of 13) Total-52 Pins
8136-PG5	16	8 & 16	Socket Terminals (2 Rows of 23)
8136-PG190			Socket Terminals, High Density (4 Rows of 7)
8136-PG20			Feed Thru Pins (2 Sets: 2 Rows of 13) Total-52 Pins
8136-PG13	16 + 2 (V & G)	V & G Sleeves	Socket Terminals (2 Rows of 23)
8136-PG191			Socket Terminals, High Density (4 Rows of 7)
8136-PG21			Feed Thru Pins (2 Sets: 2 Rows of 13) Total-52 Pins

PLUGS/MALE — CLASS 130



A

Styles A & B plugs available unassembled.

C

.300" x .100" Spacing

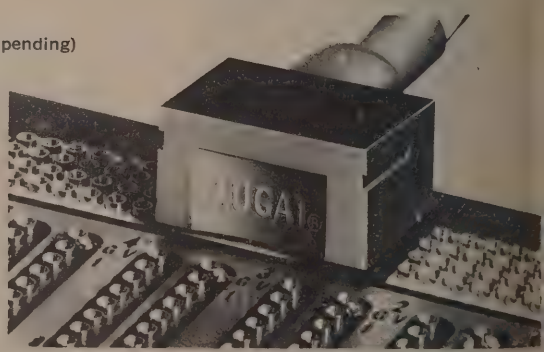
B

Part Number	Style	No. of Pins	Description
1P14-3T12-1	A	14	Inter-facing Plugs
2P14-1R12-1	B	14	Flat Cable Plugs
7P14-2T12-1	C	14	Ribbon Cable (twisted pair)
7P14-3T12-1	C	14	Ribbon Cable (flat cable)

NOTE: Standard 12", 24" and 36" lengths available. EXAMPLE: 1P14-3T12"-1. NOTE: For 16 pin assemblies, replace 14 with 16. EXAMPLE: 1P16. NOTE: For double ended plug assemblies, replace -1 suffix with -2. EXAMPLE: 1P14-3T12-2.

PLUGS/HIGH DENSITY — CLASS 130

(patent pending)



28 PINS
.100" x .100"
Grid Spacing

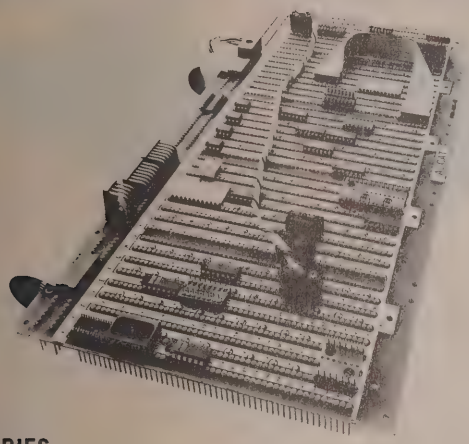
Part Number	Description
9P28-2S12-1	Assembly
8136-742P1	Hood
9P28-2G1	Base (with pins)

NOTE: Standard 12", 24" and 36" lengths available. EXAMPLE: 9P28-2S12"-1. NOTE: For double ended plug assemblies, replace -1 suffix with -2. EXAMPLE: 9P28-2S12-2.

MATING SOCKETS AVAILABLE
Part No. 528-AG28D (P.C.)
Part No. 528-AG24F (Wire wrap)

Boards/Accessories

UNIVERSAL BOARDS — CLASS 005



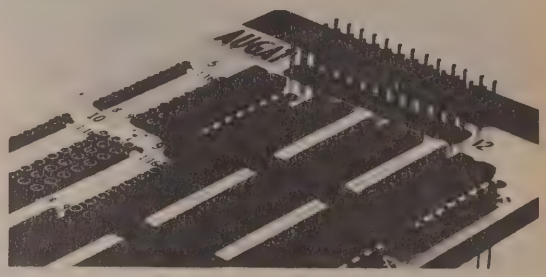
U-SERIES

• ⅛" thick board accepts any combination of 6 through 40 lead dip I.C.'s. • Modular Construction — boards may be purchased in multiples of 9 rows (up to 54 rows) indicated by suffix number. EXAMPLE: 8136-UG1-27 27 rows on .300" centers. See specs. for socket terminal variations.

Part Number	Voltage & Ground Connections	I.O. Area (for every 9-Row Section
8136-UG1	V & G Sleeves	Socket Terminals (2 Rows of 23)
8136-UG119		Socket Terminals, High Density (3 Sets: 4 Rows of 7) Total-84-Pins
8136-UG56	V & G Socket/Terminals	Socket Terminals (2 Rows of 23)
8136-UG6	V & G Sleeves	Feed-Thru Pins (2 Sets: 2 Rows of 13) Total - 52 Pins
8136-UG61	V & G Socket/Terminals	

ECL BOARDS — CLASS 020

(3 PLANES)



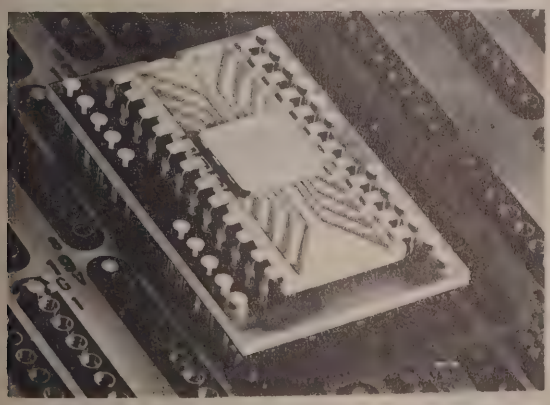
ECL/SIP SERIES (patent pending)

• ⅛" thick, 3 voltage plane boards include — 2.0V plane to terminate pull down resistors. Accommodates pluggable sip resistor networks without loss of density. Board available for ECL/TTL translators. 24-pin ALV and standard 16 pin gates.

• Modular construction available in multiple I.C. positions. See specs. for socket terminal variations.

Part Number	Function	Socket/ Terminals Per Pattern	Voltage & Ground Connections	I.O. Terminations
8136-ECL21	Standard	16	Vcc Pin 1 + 16 (ALU) 1 + 24 (Translator) 16 Vee Pin 8 (ALU) 12 + Vcc (Translator) 9 Vtt (All sip networks Pin 1)	Feed Thru
8136-ECL23	Translator			
8136-ECL26				
8136-ECL24	Array Multiplier	16 and 24		
8136-ECL25	ALU			

LSI ADAPTORS — CLASS 105



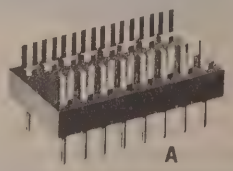
• Accept up to 40 lead LSI dip's. • Interposing LSI circuits on 14 and 16 pin patterns. • Adaptor pins located to prevent improper position on panel. •Dip's soldered into adaptor which plugs into panel. • Adaptor plugs also available for TO-5 conversion.

Part Number	Application
628-HG16	Up to 28 Pins .600" x .100" Spacing
640-HG16	Up to 40 Pins .600" x .100" Spacing

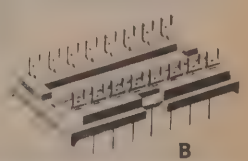
ADAPTORS — CLASS 100

• 3 Pin styles.
• Single, double patterns.

• Slotted pin only.
• Low profile.
• Low cost.
• Cover available.



A



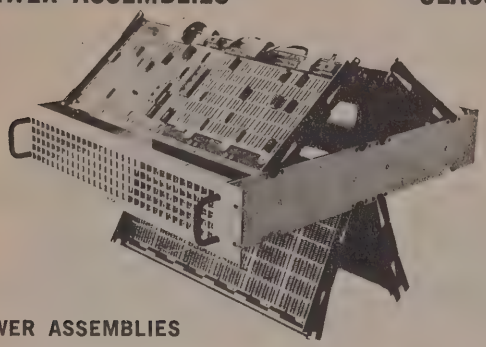
B

Part Number	Style	No. of Pins	Pin Spacing	Description
614-CG1	A	14	.300" x .100"	Slotted Pin
616-CG1	A	16		
614-DG5	B	14		
616-DG5	B	16		
614-CG3	A	14	.600" x .100"	Slotted Pin
616-CG3	A	16		
624-CG1	A	24		
628-CG2	A	28		
636-CG1	A	36		
640-CG1	A	40		

NOTE: Plugs available in 3 pin styles: round, solder pocket and slotted — single and double patterns. (Style A only.)
Cover — 14 pin, 614-2P1: 16 pin, 616-2P1. (Style B only.)

AUGAT® Drawers Boards/Racks Kits

DRAWER ASSEMBLIES — CLASS 200



DRAWER ASSEMBLIES

• Accepts up to four plane mount boards, up to 720 dip I.C.'s. • Frames are hinged either side for accessibility and easy removal. • Dust covers furnished. • Designed for 19″ rack mounting. • Optional perforated or solid end plates.

FULL DRAWER DEPTH: 20.425 ±.030

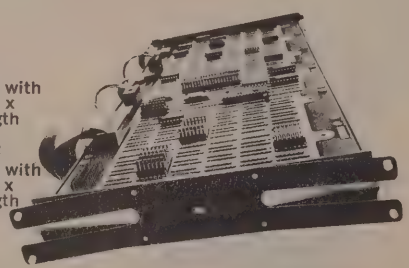
Part Number	Description
8170-DG1	Drawer assembly with fan cutout rear plate and perforated front plate. (Accepts 4 board frames.)
8170-DG2	Drawer assembly with rear blank plate and front blank plate. (Accepts 4 board frames.)

HALF DRAWER DEPTH: 12.325 ±.030

Part Number	Description
8170-DG4	Drawer assembly with fan cutout rear plate and perforated front plate. (Accepts 2 board frames.)
8170-DG5	Drawer assembly with rear blank plate and front blank plate. (Accepts 2 board frames.)

NOTE: Order board frames separately.

MATERIALS: (Full drawer and half drawer)
All frame members are aluminum, gold iridite. Front plate is painted blue.



Part Number 8170-14G1
Accepts any board series with 175,26/6.900 Max. Width x 411,48/16.200 Max. Length

Part Number 8170-14G2
Accepts any board series with 190,50/7.500 Max. Width x 411,48/16.200 Max. Length

BOARD FRAMES

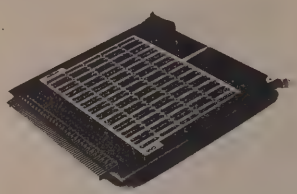
Frames are hinged at both ends with spring latch, permitting accessibility to either component side or wire wrapped side of board. Frame may also be removed by depressing both ends of spring latch. Mounts full 180 pattern board or a combination of board styles up to 180 patterns.

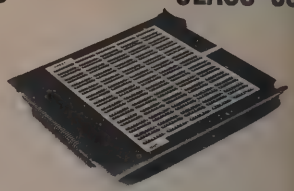
KITS

HOLTITE™ SOLDERLESS, PLUGGABLE INTERCONNECTION PACKAGING SYSTEM converts plated-thru holes to plug-in sockets without soldering. Offers the low profile of direct soldering and the benefits of a totally pluggable system. Precision machined contact is press fitted into a printed circuit board plated-thru hole. Conversion to Holtite system is accomplished by simply changing drilled hole diameter prior to plating.

FIBEROPTIC ENGINEERING KIT enables low cost engineering evaluation of fiberoptics. Complete kit contains 5-meter cable assembly, IRED emitter assembly temperature-referenced photodetector assembly, TTL-compatible preamplifier and TTL-compatible emitter driver. Kit operates from DC to 5 MBPS.

PLUG IN TYPE BOARDS — CLASS 005





W-SERIES for pin and socket type connections.

R-SERIES FOR EDGE BOARD CONNECTIONS

Part Number	Socket/Terminals Per Pattern	Board Thickness	Voltage & Ground Connections
8136-RG1	14 .300″ x .100″ Spacing	1/8″	7 + 14
8136-RG2			V + G Terminals
8136-RG7		1/16″	7 + 14
8136-RG8			V + G Terminals
8136-RG3	16 .300″ x .100″ Spacing	1/8″	8 + 16
8136-RG4			V + G Terminals
8136-RG9		1/16″	8 + 16
8136-RG10			V + G Terminals
8136-RG58	Blank Card	1/8″	
8136-RG85		1/16″	
8136-138G1	Extender Card	1/8″	
8136-RG86		1/16″	

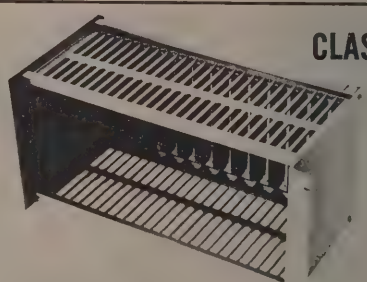
NOTE: Connector only — Part No. 14005-1P1 (1/8″) 14005-19P1 (1/16″) (120 contact — 60 dual row).

UNIVERSAL TYPE

Part Number	No. of Rows	Board Thickness	Voltage & Ground Connection
8136-URG1	20 Rows of 50 Contacts on.300″ Centers	1/8″	V + G Terminals
8138-URG14		1/16″	

Also available . . . A universal style I.C. packaging board for station access in the "CAMAC" crate.

RACKS — CLASS 205



R-SERIES RACKS FOR R SERIES BOARDS

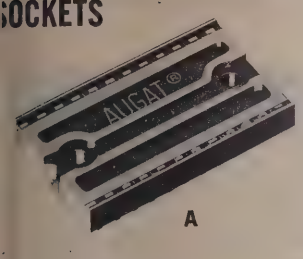
Part Number	Accepts Panel Thickness	Description
8160-EG10	1/8″	Back Panel Only (with 13 connectors)
8160-EG21	1/16″	
8170-RG1	1/8″	Rack with Back Panel for 19″ Rack Mounting
8170-RG14	1/16″	
8170-RG3	1/8″	Same as RG1 or RG14, Except without Back Panel
8170-RG16	1/16″	

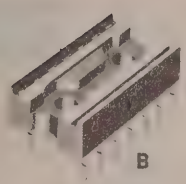
NOTE: The above part numbers are for 13 connector positions. For 3,6 or 9 connector position racks and back panels, simply add proper suffix to the end of part number.
EXAMPLE: 8160-EG10-3 (3 connector position).

AUGAT INC. 33 Perry Avenue, P.O. Box 779, Attleboro, Massachusetts 02703 / (617) 222-2202 / TWX 710-391-0644

Sockets

SOCKETS — CLASS 410





Low Profile — Printed Circuit)

Low Cost. • Low Profile — **.163 above P.C. board** (I.C. Seating Plane). • Two termination styles available: APPLICATION: Style A — any hole size down to .025 dia., Style B — recommended mounting hole .035 ±.002 dia. for good retention in P.C. board during wave soldering. • Beryllium copper contacts insures greater and more uniform normal force.

Part Number	No. of Contacts	Insulator Length	Insulator Width	Contact Plating	Termination

324-AG37D				Tin	B
324-AG38D				Gold	
340-AG39D	40 .600″ x .100″	2.000″ Max.	.705″ Max.	Tin	A
340-AG40D				Gold	
340-AG37D				Tin	B
340-AG38D				Gold	

NOTE: Request information on 22 and 28 contact sizes.

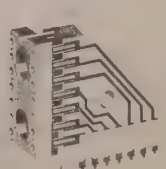
MATERIALS

Insulator: Thermoplastic polyester, UL rated 94V-O.
Contacts: Beryllium copper, gold over nickel or tin plated.
Wafer: .005 Tk. Nomex.

SOCKETS (L.E.D.) — CLASS 425

45°, 60°, and 90°
L.E.D. NUMERIC DISPLAY SOCKET

• Two piece machined contact assembly — inner contact and outer sleeve. • Design will permit gang mounting on P.C. board — .400 centers or greater.

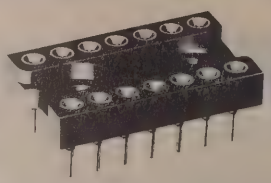


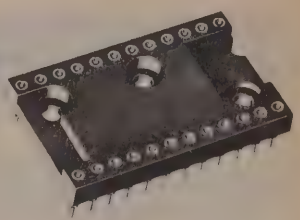
(patent pending)

Part Number	No. of Pins	Socket Angle	Termination
514-AG21D	14 .300″ x .100″	90°	Printed Circuit
514-AG25D		45°	
514-AG26D		60°	

NOTE: For 16 pin, replace 14 with 16. EXAMPLE: 516-AG21D.

SOCKETS — CLASS 415

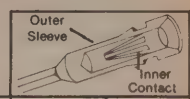




(Machined Contact)

• Meets most severe environmental conditions including military requirements of high shock and vibration. • Two piece tapered entry socket terminal — four leaf machined closed entry inner contact and machined outer sleeve. • Wire Wrap* (2 or 3 level) or P.C. termination. Gold plated contacts, gold or tin plated outer sleeves.

All sockets listed are with printed circuit termination. See note below for ordering sockets with wire wrap termination.



Part Number	No. of Contacts	Insulator Length	Insulator Width	Insulator Height	Contact Plating	Sleeve Plating
508-AG10D	8 .3″ x .1″	.400″ Max.	.450″	.180″ Max.	Gold	Gold
508-AG11D					Gold	Tin
514-AG10D	14 .3″ x .1″	.750″	.450″	.135″ Max.	Gold	Gold
514-AG11D					Gold	Tin
516-AG10D	16 .3″ x .1″	.850″	.450″	.135″ Max.	Gold	Gold
516-AG11D					Gold	Tin
518-AG10D	18 .3″ x .1″	.900″ Max.	.450″	.135″ Max.	Gold	Gold
518-AG11D					Gold	Tin
522-AG10D	22 .4″ x .1″	1.150″	.550″	.135″ Max.	Gold	Gold
522-AG11D					Gold	Tin
524-AG10D	24 .6″ x .1″	.1200″ Max.	.750″	.135″ Max.	Gold	Gold
524-AG11D					Gold	Tin
528-AG10D	28 .6″ x .1″	1.400″ Max.	.750″	.135″ Max.	Gold	Gold
528-AG11D					Gold	Tin
532-AG10D	32 .6″ x .1″	1.600″ Max.	.750″	.135″ Max.	Gold	Gold
532-AG11D					Gold	Tin
536-AG10D	36 .6″ x .1″	1.800″ Max.	.750″	.135″ Max.	Gold	Gold
536-AG11D					Gold	Tin
540-AG10D	40 .6″ x .1″	2.000″ Max.	.750″	.135″ Max.	Gold	Gold
540-AG11D					Gold	Tin

NOTE: The above sockets are also standard with wire wrap termination, simply replace "D" suffix with "F" suffix for three level and "F"-2 for two level. EXAMPLE:

	Gold/Gold	Gold/Tin
2 Level	516-AG10F-2	516-AG11F-2
3 Level	516-AG10F	516-AG11F

MATERIALS

Insulator: Thermoplastic polyester, UL Rated 94V-O.

SOCKET/TERMINALS:

Terminal: Brass, gold over nickel or tin plated.
Female Contact: Beryllium copper, gold over nickel or tin plated.

SOCKETS — CLASS 510

(Trans. & I.C., Low Profile)

• Low cost. • Molded insulator and automated contact assembly — save you money. • Ultra low profile — precision machined contact assembly.

UNITED PRICING REPORTS

the single source that speeds up invoicing, pricing, quoting, purchasing and estimating

Electronic component prices change so fast, you'd need a team of people just to keep up.

United Pricing Reports is the better way. When you subscribe to Pricing Reports you receive 1500 pricing sheets (3000 pages) of the latest prices, as of the date we ship them to you.

This gives you, in a single source, up-to-the minute selling prices on more than 500,000 electronic components.

United Pricing Reports gives you accurate resale prices at the exact moment you need them. Not hours or days later. So it helps you eliminate frantic phone calls, letter writing and catalog scanning to check on prices when you write an invoice or type a purchase order.

Twice weekly price updates.

One week after you receive your Pricing Reports source book (1500 pricing sheets) you begin receiving twice weekly price updates. You simply take these new price pages and replace the now obsolete pages with them.

The whole process is simple. All information is organized alphabetically by manufacturer. And each manufacturer's price schedule is listed by part number in numerical/alphabetical sequence.

One more thing. When we promise twice weekly updates, we deliver. 52 weeks a year, consistently. Not monthly or every other month. We have a tradition of delivery on our promises, and we're certainly not going to stop now.

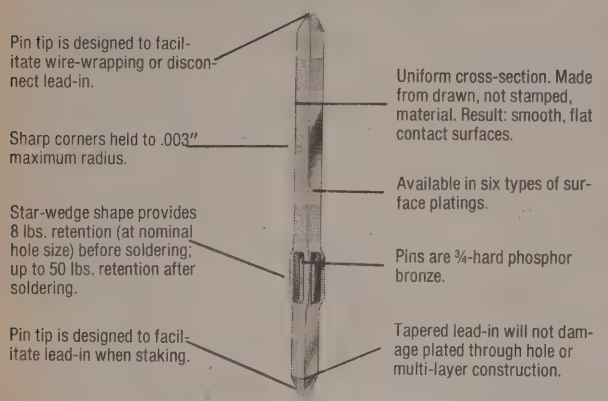
BergCon™ .025" square modular interconnection system . . .

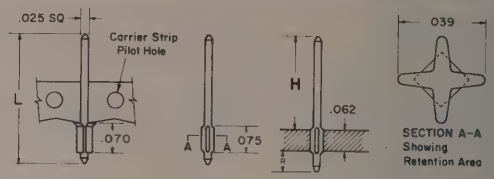
offering high density .100" grid stacking . . . end-to-end or side-to-side . . . across a wide range of connector types.

BergPin™ male terminals for disconnect and wire-wrapping

System provides a fast, reliable method for staking pins in circuitboard. Here are the features that distinguish BergPin terminals from ordinary wire-wrapping pins:



Pin tip is designed to facilitate wire-wrapping or disconnect lead-in.
Sharp corners held to .003" maximum radius.
Star-wedge shape provides 8 lbs. retention (at nominal hole size) before soldering; up to 50 lbs. retention after soldering.
Pin tip is designed to facilitate lead-in when staking.
Uniform cross-section. Made from drawn, not stamped, material. Result: smooth, flat contact surfaces.
Available in six types of surface platings.
Pins are ¾-hard phosphor bronze.
Tapered lead-in will not damage plated through hole or multi-layer construction.



Part Number	Plating	Underplating	Material
75401-	30 mill min. gold*	50 mill min. nickel	Phosphor-bronze (¾ hard) ASTM B159-66

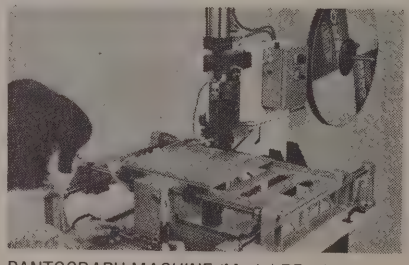
This listing gives the material, plating and underplating; it does not show the pin length or height above board. For these dimensions, we refer you to Berg Bulletin 105 which is available upon request.

BergPin staking machines cut costs, control quality

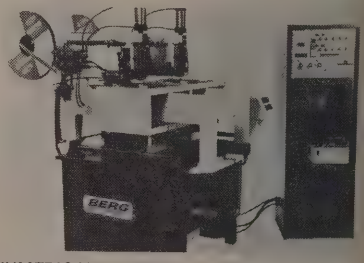
PRODUCTION MACHINE (Model BP-161)

For staking boards with limited number of pins or boards with varying pin configurations. Operator manually locates hole position and initiates staking cycle for up to 2000 insertions per hour.



PANTOGRAPH MACHINE (Model BP-151)

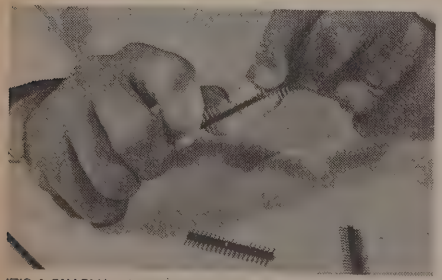
Ideal for straight-line insertion in boards or for high quantities of identical boards. Stakes up to 3500 pins per hour.



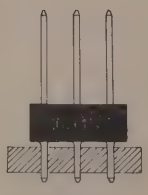
NUMERICALLY-CONTROLLED MACHINE (Model NC)

For high-speed automatic staking. Features a numerically-controlled, X-Y positioning system for programming pin-to-pin spacing and row patterns. Twin insertion heads simultaneously stake two identical boards at rates up to 12,000 per hour.

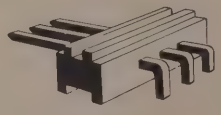
BergStik™ straight and right angle headers on .100", .125" and .150" centers



IT'S A SNAP! Headers can be broken to desired length by hand.



Straight Header



Right Angle Header

An inexpensive new method for inserting .025" sq. pins in boards for wire-wrapping or input/output usage. Suitable for high-volume production as well as prototyping. Supplied in many lengths and in choice of platings. Stackable to grid pattern on their respective pin centers. BergStik Headers are notched to allow user to break to any desired number of positions.

See Bulletin 140 for complete details.

BergCon™ .025" square modular interconnection system

Dual-metal PV receptacles provide superior electrical and mechanical properties

(Beryllium copper spring; ¼-hard brass body)

PV Receptacles . . . mate with .025" square pins on .125" grid or greater

The Berg "PV" connector is the most reliable .025" post receptacle in use today. This unique terminal provides a virtually constant retention force even after repeated cycles on a male pin. The spring of the PV is available in a choice of thicknesses enabling you to "design in" a retention force that is tailored to the application.

Mini-PV Receptables . . . mate with .025" square pins on .100" grid spacing

The smaller version of the PV is of similar two-piece design for lasting retention after repeated disconnects. The Mini-PV is available in 4 varieties of platings including SPOT O' GOLD. (The latter gives you the electrical and mechanical properties of gold where you need it—in the contact area and in the spring.) Install the Mini-PV in a latch housing for 1 through 72 simultaneous connections. See application machines below.

*Gold Contacts Only

For complete details, contact your local Berg Sales Engineer.

Applying PV Receptacles

MODEL 200 PV CRIMPER

This electrically-operated bench press provides 1500 or more quality crimps per hour. Machine has 2½ ton capacity and features a short press stroke and direct clutch linkage. Size: 29" high x 26" long x 16" wide. Weight: 150 lbs. Power Requirements: 80-100 psi air; 120 V electrical.

(See Bulletin 101B for additional information)

MODEL 250 PV CRIMPER

Air-powered unit is compact, delivers approximately 1000 terminals per hour (depending on operator dexterity.) Operates on 80 psi air. Uses 110 V for light source. Size: 26½" high x 18" long x 10" wide. Weight 50 lbs.

HAND TOOL (not shown)

Sturdy. Duplicates the quality of crimping machines. Features a positive ratchet that does not release until full crimping pressure is applied to a terminal.

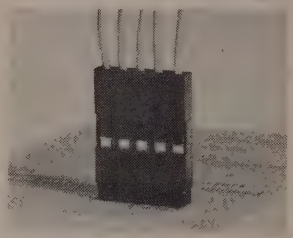
BergCon™ .025" square modular interconnection system

Housing (Latch or Rod Type)

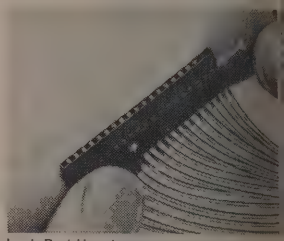
Berg Mini-Latch Housings allow simultaneous connection of as many as 72 Mini-PV terminated conductors; are available in many standard sizes.

Berg Lock-Rod Housings employ a lock rod to retain the terminal; ideal for applications requiring frequent wiring changes or for prototyping. Lock-Rod Housings connect as many as 31 Mini-PV terminated conductors in a single row—up to 62 in twin rows on .100" grid. Supplied 31 single row for .150" centers.

(See Bulletin 101B for complete details.)



Latch Housing



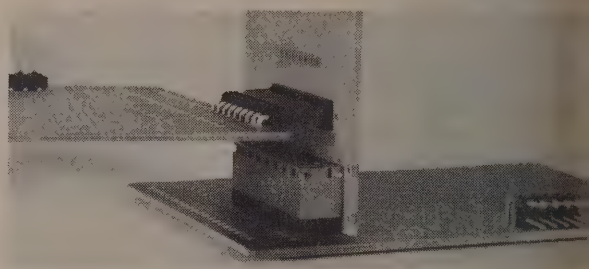
Lock-Rod Housing

PV Card Connectors–Vertical-Horizontal

These PV Card Connectors are available in single and double row configurations to mate with .025" square pins on .100" or .150" grids. Applications: Programmable or functional board-to-board mounting at right angle, parallel or the same plane.

		Number of Positions	
		Horizontal	Vertical
.100" GRID	Single Row	5–52	2–50
	Double Row	10–130	4–100
.150" GRID	Single Row	5–30	2–72
	Double Row	10–86	12,16,20&24

(See Bulletin 112C or your Berg Sales Engineer for additional information)



BergPin .025" square post and ferrule assemblies mate with Berg PV card connectors.

Vertical Stake-to-Board PV Receptacle

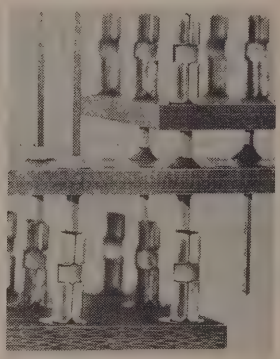
Receptacle stakes to PC board allowing dense packaging configuration by parallel mounting 1/16" glass-epoxy circuit boards. Features top or bottom entry which gives greater flexibility in placement on circuit board. Two-piece design provides lasting retention even after repeated cycling. Reliable application machines substantially reduce applied cost.

(See Bulletin 118 for additional information.)

Horizontal Stake-to-Board PV Receptacle

This version of the Berg PV receptacle is staked to the PC board, then wave soldered. Its design allows for dense packaging configurations in vertical mounting 1/16" glass-epoxy circuit boards. Horizontal PV receptacles can be employed with BergPin terminals to provide quick pluggability. Receptacles are supplied in strip form for high-speed machine staking.

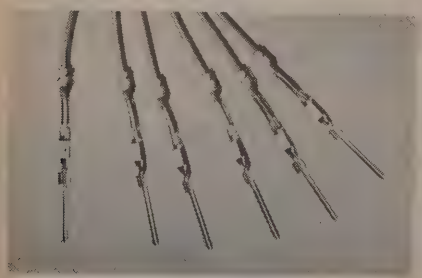
(See Bulletin 333 for additional information)



Vertical PV Receptacle

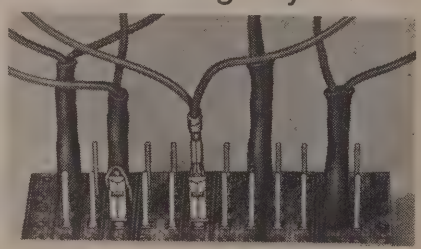
Horizontal PV Receptacle

Crimp-to-Wire Male Pin



Compatible with BergCon .025" square interconnection system. Makes flying-type connector when mated with Berg Mini-PV receptacle and used with Mini-latch housing. Maximum current rating: 5 amperes. 5.0 milliohms maximum contact resistance when mated with a Mini PV contact. *(See Bulletin 101B for additional information)*

Daisy Chain for Pre-testing Layouts



Here's a back-panel wiring system in easy-to-handle reel form. Consists of a continuous length of #28 gauge stranded wire with 250 insulated PV's crimped at constant intervals (2½" to 5" center-to-center spacing). Eliminates wire measuring, stripping, soldering, or expensive hand-tool terminating in your plant. *(See Bulletin 101B.)*

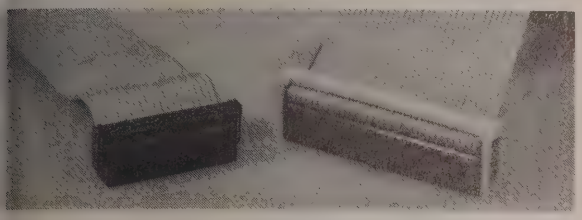
Mini-Jump Connector

MINI-JUMP, provides flexibility in circuit programming of mini-computers, card readers, printers, modems, and POS equipment. It allows for high density packaging; is stackable in both directions on .100" centers and up. Low-profile design permits tight packaging in the vertical plane. Mates with industry standard .025" square pins or .028" round pins. MINI-JUMP, which features Berg dual-metal receptacles, is supplied in a variety of package sizes. *(See Bulletin 144 for additional information)*

ositive-Latch Quickie™ Connectors terminate multi-lead cable in about 10 seconds

Berg QUICKIE series of connectors is designed to interface with flat, flexible round nductor cable on .050" centers. Connectors in this series eliminate the time, problems l expense of pre-stripping.

tandard Female Connector *



is form is used to interface flat flexible round conductor cable on .050" centers to 25 square wire-wrapping pins on .100" square grid. (It also mates with .025" round ns.) The standard QUICKIE Connector consists of two basic parts—the housing and cover. A third part—the strain relief—is not essential in all uses.

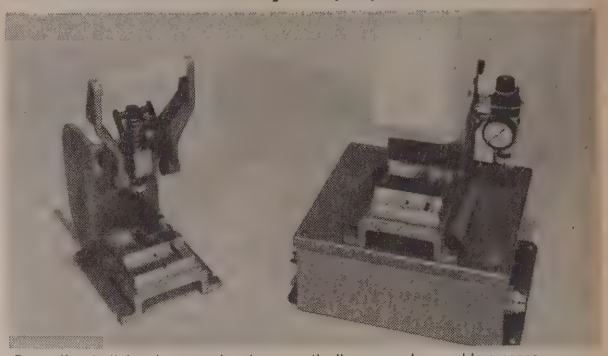
otes: A—Closed end cover style B—Thru end cover style

ote: A polarized version of the standard female is also available. Polarization is accomplished without loss of a pin position.

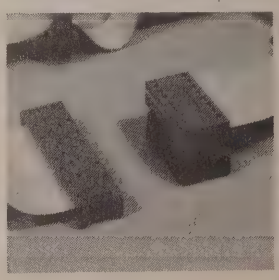
Quickie Assembly Equipment



Berg offers both hand-powered and pneumatically powered assembly presses.

Quickie Cable

Cable is supplied in PVC insulation including a choice of 28 AWG stranded or 30 AWG solid wire. Cable is available in 8 sizes.



Quickie Male Dip and PCB Connectors

The Male DIP Connector is available in 2 X 7 and 2 X 8 configurations . . . may be plugged into standard IC sockets.

The PCB Connector is available in 6 sizes for solder application directly to the printed circuit board.

Quickie Shielded Right-Angle Headers and Straight Headers

Berg QUICKIE Right-Angle Headers are fully compatible with the standard female connector. Available with plastic latches which give assurance that connector remains mated during vibration. The Straight Header also is fully compatible with the standard female connector; it is shielded on three sides.

See Bulletin 1200 for a comprehensive listing of the various forms of the QUICKIE Connector.

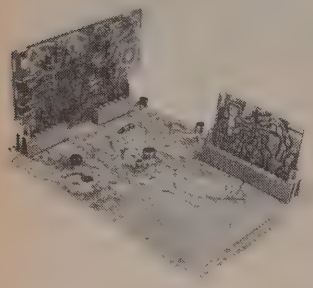
Shielded Right Angle Headers for .100", .125" or .150" Grid

Headers consist of glass-reinforced Nylon housings having .025" square pins on .100 grid which are molded in position for maximum strength. The configuration provides an integral top shield that serves to protect the pins from damage, plus side shields that prevent pin bending when female housings are removed. *See Bulletin 150*

BergLok™ Modular Interconnection Blocks . . . a simple, reliable way to mount replaceable daughter-board modules in electronic assemblies

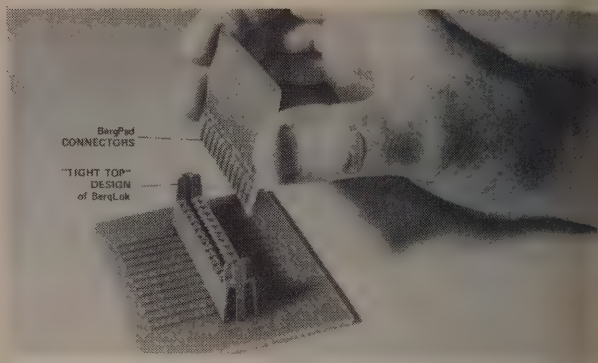
BergLok Connector Blocks provide a vertical mounting system for logic cards, ceramic substrates, and printed circuit cards, single or double sided. These blocks afford complete pluggability of modules into any conventional PC mother board, 1/16" thick. Standard center-to-center spacing is .200".

These connector blocks can be mounted in any position on the mother board and, thus, permit complete flexibility in packaging design and assembly. In most applications, BergLok Interconnection Blocks resist impact, shock and vibration without **supplementary support devices.**



Blocks have snap-lock base to anchor connectors firmly in mother board prior to wave soldering. No tools or fixtures needed. End-block latches lock daughter-boards firmly in place during handling and shipping. Yet boards can be easily removed for servicing or replacement.

(See Bulletin 116 for complete details)

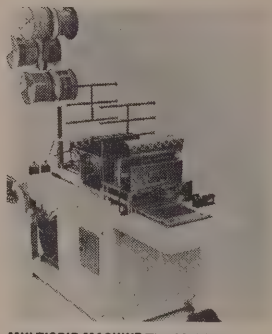


The tightly-controlled card guide that guarantees the stabilization of .062" daughter board in BergLok blocks is known as **"Tight-Top."**

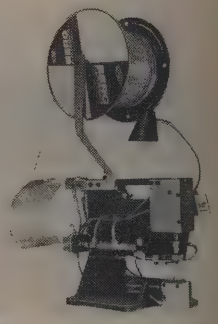
"BergPad," a terminal which is applied to the edge of P.C. board to replace copper-clad fingers, eliminates the problems of peel strength and wave solder thickness control. BergPad terminals can be applied to one side of the standard .062" board or to both sides of .031" to .045" board. (Write for details or see your local Berg Electronics Sales Engineer.)

Griplet® Lead-Holding Connector for PC Boards . . . machine-insertable at rates up to 100,000 per hour

The Griplet connector is inserted into holes in a PC board in order to hold component leads or wires at a desired depth. It protects the pads, firmly retains the inserted conductor and promotes a more reliable solder joint . . . while providing faster circuit assembly. Griplets are also used as a mechanical means of obtaining an electrical connection between two sides of a PC board.



MULTIGRIP MACHINE The Multigrip is designed for multiple inserting and staking of Griplet connectors in large quantities of identical boards. Rate: approximately eight boards per minute; inserts up to 70,000 Griplet connectors per hour. Berg also has several other Griplet model machines.



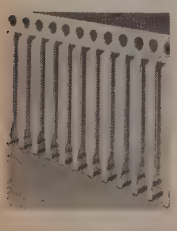
MODEL K Semi-Automatic Machine. Designed for economy and reliability. Inserts and stakes one connector per cycle. Rate: approximately 1,800 per operator-hour.

(See Bulletin 301 for complete listing.)

BergLance™ Low-Cost Wire-Wrapping Posts . . . for rapid, reliable staking in circuit board

BergLance posts and application machines provide high-speed staking of termination points in circuit boards for radio, TV, electronic organ, and similar consumer electronic products. Available in 2 basic cross-sections (.025" x .061" and .025" square) and with choice of lengths. Terminals, which are supplied in strip form for automatic insertion, have solder pre-coat and high-quality 60–40 tin lead finish.

(See Bulletin 107 for additional information.)



Berg "Shotgun" Machine has staking potential of up to 150,000 pins/day. Board area—11" x 12". Many other machines available to meet production needs.

Minisert™ Low Profile, Miniature PC Socket . . . provides repeated pluggability

e Berg MINISERT is a superior pluggable socket that assures positive retention in e circuit board prior to soldering, and spring-to-board electrical contact after sol- ring. The unique design of the MINISERT cup and spring extension allows solder to drawn to the top surface of a two-sided board, producing a solder fillet on the top d without overflow into the socket.

n elastomeric seal keeps foreign matter out of the socket before and after the com- nent lead has been inserted. This seal remains in place throughout the life of the cket.

e MINISERT accepts round leads ranging from .012" to .022" diameter, or flat leads 08" to .015" thick by .015" to .023" wide. Sockets will fit a hole size ranging from 50" to .058" and are furnished on a metal carrier strip for insertion by the Berg S-105 Machine. This machine provides substantial savings in time and in total plied cost.

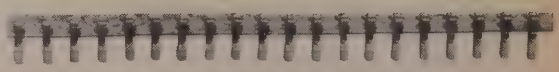
e MINISERT socket is also supplied in Kapton tape; it can be clipped to length for anual insertion in dual-in-line pattern or for terminating flat cable PC board jumpers. ose sockets are on .100" centers. Supplied on reels of 25,000 or 5,000 socket antities.

Features

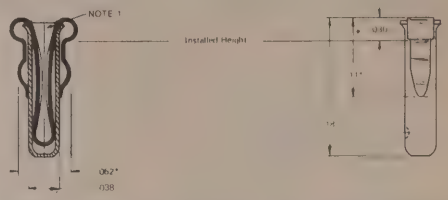
- Low-Profile—Extends only .030" above and .088" below a 1/16" board.
- Fits wide range of hole sizes; accepts many sizes of round or flat leads.
- Provides repeated pluggability for dual-in-line packages, LED's, lamps, transis- tors, etc.

Part Number	Standard Packaging	Recommended Applicator
75060-007	25M per reel	MS-105
75060-008	5M per reel	MS-100
75315-001	Loose piece	Tool
75540-001	25M reel (KAPTON)	Hand Inserted
75540-002	5M reel (KAPTON)	Hand Inserted

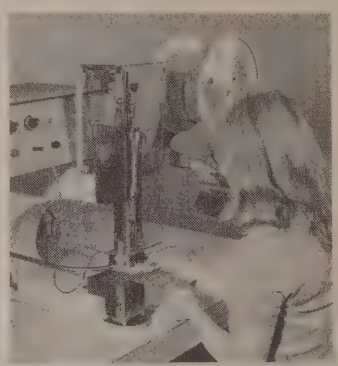
See Bulletin 120 for complete details.)



Minisert Sockets are now supplied in Kapton® Tape. Just clip to length for manual insertion.



NOTE 1. Elastomeric Seal keeps foreign matter out of the socket before and after component lead has been inserted. This seal remains in place throughout the life of the socket.

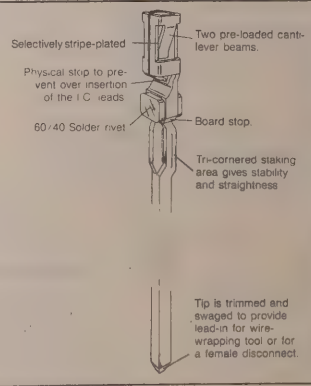


Berg pneumatically operated MS-105 machine inserts approximately 2,000 sockets per hour. A hand-operated (MS-100) insertion device is available for small runs; rate 800–1,000 per hour. A handtool kit can be purchased for prototyping purposes.

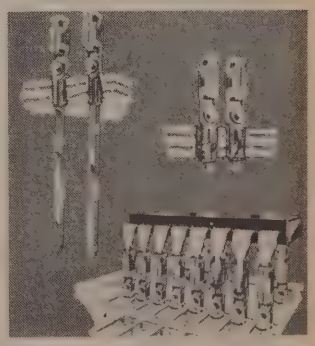
Berg Tri-Socket™. . . a .025" square wire-wrapping or solder-tab socket for 1/16" through 1/8" thick boards.

erg's Tri-Socket is a one-piece, free-standing design which will accommodate a ariety of lead sizes. It has tri-cornered fins in the staking area which extend beyond ne suggested hole diameter of the PC board. When inserted, the fins retract allowing entle entry into the board. The 3-point contact gives the Tri-Socket stability and traightness without causing damage to the thru plating. (The Tri-Socket does not ntroduce the great stresses to the PC board that are created with interference-fit ype pins).

unique feature is a 60/40 solder rivet which is precisely positioned above the tri- ornered area. This rivet is already for reflow. After reflow, retention force exceeds 60 ounds. *(See Bulletin 390 for complete listing.)*



Selectively stripe-plated
Two pre-loaded cantilever beams.
Physical stop to prevent over insertion of the I.C. leads
60/40 Solder rivet
Board stop
Tri-cornered staking area gives stability and straightness
Tip is trimmed and swaged to provide lead-in for wire-wrapping tool or for a female disconnect.



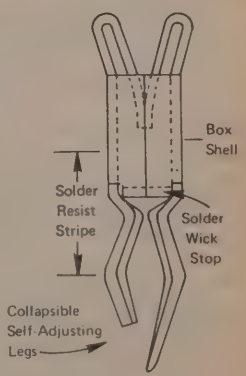
Low-Profile, Dual-Beam IC Socket Package

Berg's Dual-Beam I.C. Socket is a highly reliable low-profile DIP Package which will not allow solder wicking. The target area is .020" X .040"; socket design has a press-fit leg so the package will not fall out of the P.C. board after insertion. Ventilated molding and stand-offs allow for easy cleaning of the complete P.C. board assembly. This package consists of tin or gold plated phosphor bronze sockets which are inserted into a precision molded one-piece glass-filled polyester thermoplastic housing.

The Berg Dual-Beam DIP Package will accept leads ranging from .009" to .012". Face-wipe design provides maximum wiping action with mating package leads. Beams serve to track a bent or biased lead.

Plastic housing has a height of .175" maximum; its width allows for side-by-side mounting and measures .430" maximum. Housing material is rated UL 94V-0.

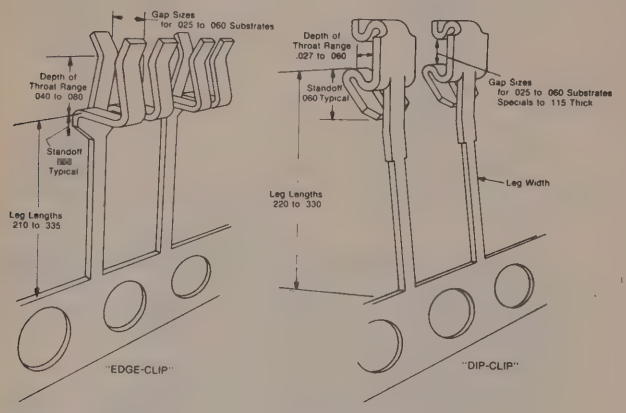
(See Bulletin 147 for complete listing)



Solok* Terminations for Ceramic Hybrid Microcircuits

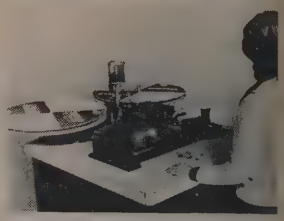
Solok* Terminations clip onto substrate rather than into holes drilled through it. They mechanically hold their position until soldered for a permanent connection. Berg offers a complete terminal application machine system. Its broad standard line is backed by an unusual custom design capability. *DuPont Trademark

Two basic types . . . many configurations



Gap Sizes for .025 to .060 Substrates
Depth of Throat Range .040 to .080
Standoff .060 Typical
Leg Lengths .210 to .335
"EDGE-CLIP"
Depth of Throat Range .027 to .060
Standoff .060 Typical
Gap Sizes for .025 to .060 Substrates Specials to .115 Thick
Leg Width
Leg Lengths .220 to .330
"DIP-CLIP"

Edge-Clip Machine
This machine is used for single edge-mounted terminals. It can be programmed to install terminals at any given pad location or to skip terminals in an area where there is no pad. Rate: Up to 1500 packages per hour.



Dip-Clip Machine
This semi-automatic machine is used for DIP type terminations; it, too, operates at rates up to 1500 substrates per hour. (Terminals must be ordered "left" and "right" handed for this machine.)

Definition of Terms

1. **Depth of Throat**—Distance from edge of substrate to point where terminal contacts pad.
2. **Standoff**—Distance that terminal will hold substrate away from mouting board.
3. **Leg Length**—Distance from substrate to end of leg **with carrier strip removed.**
4. **Gap Size**—Opening in clip area of terminal designed to assure a mechanical hold on the substrate.

For complete details and specifications, contact your local Berg Sales Engineer or request Bulletin 124.

Berg Serpent Terminals

. . . mate with input/output connectors of IBM 360 and 370 Systems

The Berg "Serpent" is a 48-position connector which provides a reliable I/O connection within your system . . . or plug compatibility to IBM.

Its crimp-type contact, is made of phosphor bronze, and plated gold-over-nickel for excellent conductivity. Contacts have insulation-support ears which provide termination strength for conventional wires in 18-20 AWG, 22-26 AWG, and 28-32 AWG ranges as well as coaxial and shielded wires. These contacts self lock in the connector housing and provide firm wiping action.

Connector housings, made of polycarbonate, have an alphanumeric coding on front and rear for easy cavity identification. Other features include: a spring-loaded jackscrew which assures positive locking, a strain-relief cover, and mounting slots for panel mounting.

(See Bulletin 250 for additional information)

Lugs and Tie Points

for Bobbins, Coil Forms, Shield Cans

THRU-LUG TERMINALS—are precision stamped with sections that, when staked, clinch the terminal securely to both sides of the board. Catalog Section #406.

EXTRUDED COLUMN LUGS—designed for high-strength retention in circuit and terminal boards. Job-matched machines rapidly stake as many as six lugs simultaneously. Catalog Section #407.

COIL FORM AND BUTTERFLY TERMINALS—feature specially designed tips for rapid insertion and immediate retention in circuit boards. Provide wrapping and soldering points for coil winding wire. Catalog Section #202.

CAN LUGGING SYSTEMS—Berg offers a complete line of lugs for mounting shield cans to circuit boards. Designs include flat-sided or cylindrical can types for flush or elevated mounting and four styles to automatically key cans. Catalog Section #203.

BOBBIN TERMINATIONS—Berg's system for inserting lugs into molded bobbins eliminates costly insert molding and provides secure connection points. Available in thru-lug and blind-pocket types. Catalog Section #204

cable concepts corporation

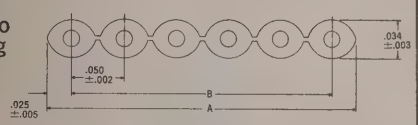
FLAT CABLE AND ASSEMBLIES FOR THE ELECTRONICS INDUSTRY

About Cable Concepts Corporation

CCC supplies flat ribbon cable to major connector manufacturers for use in their own cable and harness assemblies. They come to us because our specially designed, high precision machinery, coupled with a rigid quality control system, has made us a leader in the volume production of standard and special flat cable. CCC products include cable up to 5 in. wide, using solid or stranded round conductors or flat conductors, jumper cable, prestripped jumpers, and connector-cable assemblies.

ROUND CONDUCTOR FLAT CABLE

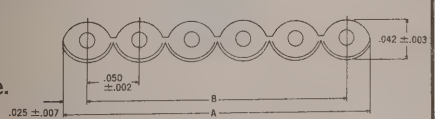
Available in symmetrical cross-section to allow mounting connector in either orientation.



UL Style No.	2651 or 2828
Color	Gray (custom colors available)
Marking	Edge marked red on gray
Wire Gauge	28 AWG stranded (7-#36 AWG), tinned 30 AWG solid, bare
Conductor Spacing	0.050 in. center-to-center
Insulation Resistance	$>10^4$ MΩ (10 ft. sample)
Cable Concepts Part No.	CC-XX-7361VS (stranded) CC-XX-300VS (solid)

ROUND CONDUCTOR COLOR CODED FLAT CABLE

Laminated pre-insulated stranded wire.



UL Style No.	2697
Color	Brown, red, orange, yellow, green, blue, violet, gray, white, black, and repeat
Wire Gauge	28 AWG stranded (7-#36 AWG), tinned
Conductor Spacing	0.050 in. center-to-center
Backing Material	Clear PVC film
Insulation Resistance	$>10^3$ MΩ (10 ft. sample)
Cable Concepts Part No.	CC-XX-7361VCS

HOW TO ORDER CABLE

CC 10 7361 V C S X

- **CC** — CCC
- **10** — No. of conductors
- **7361** — 2-digit number is solid conductor; 3- or 4-digit number is stranded; 6-digit number is rectangular conductor
- **V** — 0: Bare copper; 1: Tin-plated copper; 2: Silver-plated copper
- **C** — V: Polyvinyl chloride; F: FEP Teflon; M: Mylar; K: Kapton
- **S** — Color coded
- **X** — Symmetrical cable
- Special construction

CABLE-CONNECTOR ASSEMBLIES

CCC has extensive experience in terminating, assembling, and carefully testing flat cable-connector assemblies and harnesses. CCC cable can be terminated with any commercially available insulation-displacement connector. These can be to customer specification, or will be selected by Cable Concepts on the basis of price, technical requirements, or availability. Call for quotation on assemblies engineered to your specifications.

STANDARD SPECIFICATIONS

Insulation Material	Polyvinylchloride (PVC)
Flammability Rating	UL rated FR1
Tensile Strength	30,000 psi (min.)
Voltage Rating	300V rms
Dielectric Withstand Voltage	>1500V rms
Propagation Delay	1.4 ns/ft. (nom.)
Temperature Rating	−20°C to +105°C (color coded to +80°C)
Elongation	20% (min.)
Length	100 ft. reels

CONDUCTOR ELECTRICAL SPECIFICATIONS

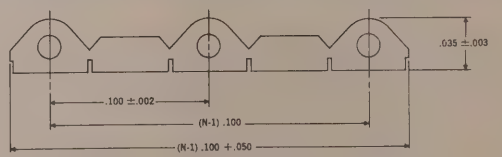
Wire gauge (AWG)	Characteristic impedance (Ω)		Capacitance (pf/ft)		Inductance (μH/ft)		Propagation delay (ns/ft)	
	GS*	GSG*	GS*	GSG*	GS*	GSG*	GS*	GSG*
#28 Stranded	150	105	7.7	15.0	.29	.20	1.38	1.40
#30 Solid	175	125	6.5	12.0	.33	.23	1.41	1.42

*Cable configuration tested: GS = Ground-Signal
GSG = Ground-Signal-Ground

DIMENSIONS

No. of Cond.	DIMENSION A	DIMENSION B
10	.500 ±.010	.450 ±.007
14	.700 ±.010	.650 ±.007
16	.800 ±.010	.750 ±.009
20	1.000 ±.015	.950 ±.009
24	1.200 ±.015	1.150 ±.009
26	1.300 ±.015	1.250 ±.009
34	1.700 ±.015	1.650 ±.009
40	2.000 ±.015	1.950 ±.011
50	2.500 ±.015	2.450 ±.011
60	3.000 ±.015	2.950 ±.011
64	3.200 ±.015	3.100 ±.011

ROUND CONDUCTOR JUMPER CABLE



UL Style No.	2651
Color	Gray (custom colors available)
Wire Gauge	26 AWG solid, tinned
Conductor Spacing	0.100 in. center-to-center
Insulation Resistance	$>10^4$ MΩ (10 ft. sample)
Cable Concepts Part No.	CC-100-261V

PRESTRIPPED JUMPERS

Precut to the lengths you specify and stripped ready for installation, these become the most economical of termination systems. Premade jumpers can have from 3 to 36 solid conductors, lengths can be anything from a minimum of 1 in.

Also available: Mylar- and Kapton-insulated flat conductor cable.

FIELD INSTALLABLE/CRIMP BNC CONNECTORS SOLVE CABLE TERMINATION PROBLEMS

REPRINTED FROM ELECTRONIC PRODUCTS MAGAZINE/JANUARY 1978

Conventional fast-assembly, non-crimp BNC connectors now on the market often involve time consuming assembly procedures, including a contact soldering operation. The modern crimp BNC's are a major improvement, but they also involve either crimping or soldering the center contact, require relatively expensive crimp tools and the handling of three or more components.

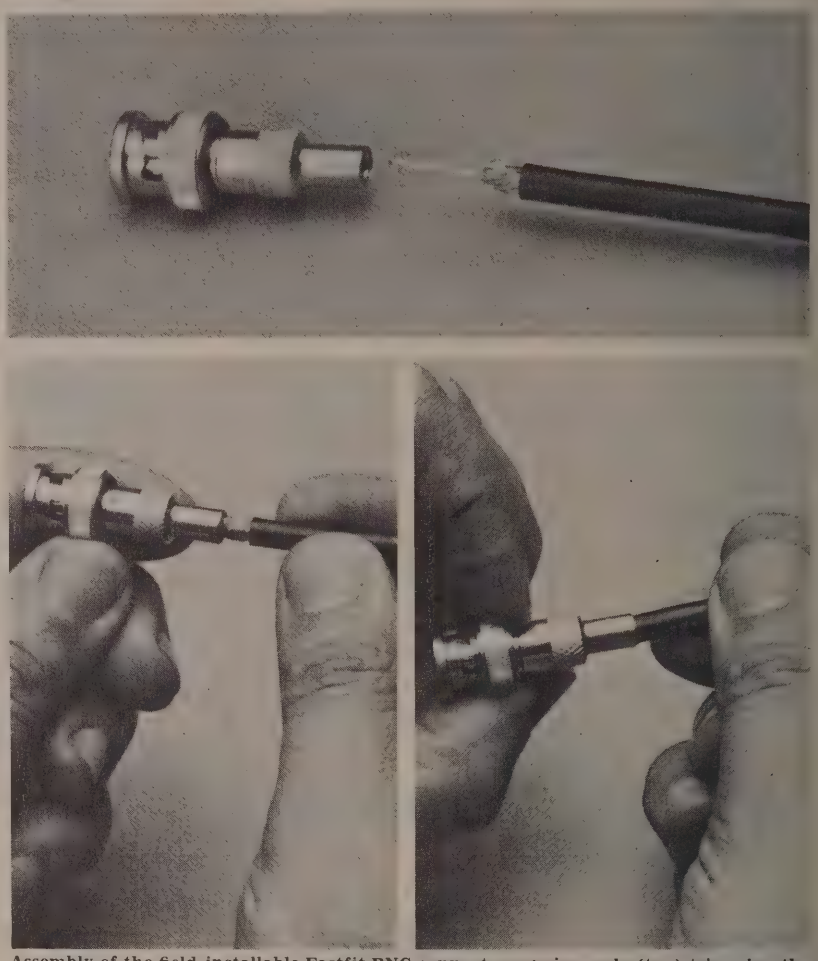
A new kind of BNC connector, called Fastfit, is significantly easier to terminate than conventional BNC connectors and consequently permits significant assembly cost savings. The field-installable version is a one-piece connector with no loose parts, and the crimp version has only a body assembly and a braid crimp ferrule. Initially, both versions are being produced for RG-58 and RG-59 type cables.

Self energizing contact

The "heart" of the connectors is a self energizing contact that is preassembled into the body between two polyethylene insulators. A U-shaped tine on the contact captures the cable center conductor on assembly, forming a secure connection. The preassembled contact insures precise positioning of the contact and therefore, proper mating face dimensions. The connector is designed to be used with solid center conductor cable.

The one-piece, field-installable version requires no contact soldering, has no loose clamp nuts or contacts to handle. It requires no wrenches, little manual dexterity, and represents a significant savings in labor, and therefore, costs. The connector is assembled by simply trimming the cable, inserting the center conductor into the rear of the connector body, thereby energizing the self-contained center contact, and twisting the connector onto the cable. A novel tapered and threaded back-end opening in the body enables it to be easily screwed onto the cable braid and jacket, forming a secure consistent termination. The connector will withstand up to 50 pounds of axial pull.

The two-piece crimp version requires only crimping of the braid, making assembly easier, consistent, and obviously saving production assembly time. Similarly, the assembly instructions are to trim the cable and simply insert the center conductor into the rear of the connector body. The crimp ferrule is then moved over the back end of the body, capturing the braid in the standard manner. An inexpensive vice-grip type of hand tool is used for crimping, with a bench and power tool also available.



Assembly of the field-installable Fastfit BNC connector requires only (top) trimming the cable, (bottom left) inserting the cable into the connector until the solid center conductor mates with self energizing contact, and (bottom right) simply twisting the connector.

The connectors have a nominal impedance of 50 or 75 ohms, a peak voltage rating of 500 V, and a dielectric withstanding voltage of 1500 V rms. Insertion loss is 0.1 dB at 2 GHz, with a VSWR of 1.05 at 1 GHz, 1.2 at 2 GHz. The connectors are brass bright nickel plated, with high density polyethylene insulators.

The crimp type, CP88 Series of BNC plugs have an OD of 0.570" with a terminated length of 1.300". Cable entry diameters are 0.213" and 2.60" for RG58 and RG59 cables, respectively. The field installable CPF188 Series of plugs have an OD of 0.570" and a length of 1.470". Cable entry diameters are 0.250" and 0.300" for RG58 and RG59 cables, respectively. Modifications or special versions of the connectors are available on request.

The BNC plugs are packaged in individual polyethylene bags with imprinted termination instructions.

WE WILL GLADLY ENTERTAIN CUSTOM REQUIREMENTS UTILIZING THIS PATENTED CONCEPT.

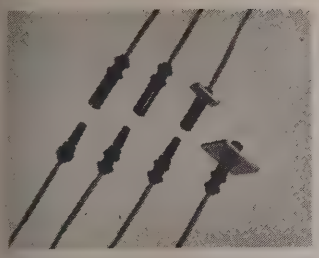
CAMBRIDGE PRODUCTS CORP
A Hi-G Company

Caton offers the best in Corona free connectors because we've been making them for over 35 years

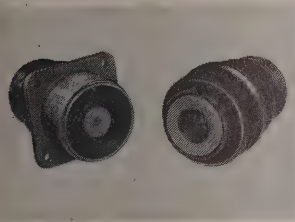


SILICONE IN-LINE CONNECTORS

PM 200 and PM 300 SERIES

These all silicone positive end pieces snap together forming a watertight connection that can easily be disassembled or changed. The units are fully molded and offer high reliability and long life. The units are corona free and leak proof.

The PM 200 series is for 30 KVDC and the PM 300 series is for 50 KVDC. Both series are available with optional grommet type ends for panel mounting.



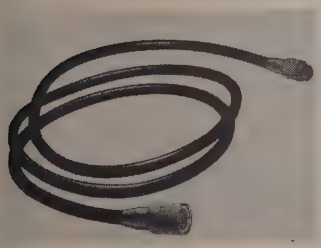
MODIFIED MS CONNECTORS

CCM SERIES

Positive contact screw-on connectors feature self-centering tapered contacts of molded resilient silicone inserts. They afford high dependability with their positive peripheral seal. The dielectric inserts are uneffected by temperatures in the range of −70°F to +480°F. They are ozone and corona resistant.

In addition to the single contact version, the CCM series come in 2, 3, 4 and 8 contact versions and have shell sizes ranging from 10 to 24. They carry voltage rates from 20 to 50 KVDC.

A line of accessories including protective caps and cable clamps are available throughout the ranges offered.



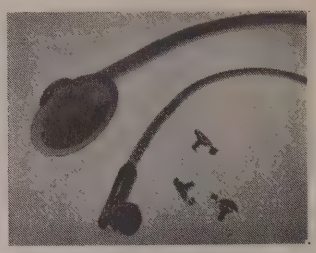
RADAR, PULSE AND HIGH VOLTAGE CABLE ASSEMBLIES

CA SERIES

These high voltage cable assemblies feature factory molded ends that assure the highest possible corona free construction. Corona extinction is measured in accordance with MIL-C-17.

These cable assemblies are the industry standard and are used in virtually all radar installations world-wide. Their corona free capabilities range from 10-30 KVAC and the Hi-Pot series from 25-75 KVDC.

The CA series comes in numerous configurations to interface with most any high-voltage/pulsed voltage requirements.



CRT ANODE LEADS SILICONE WITH BERRYLLIUM/ COPPER CONTACTS

CCR SERIES

These CRT anode leads are both leak proof and corona free. The lead assemblies are molded silicone with heat treated contacts. They offer excellent fire and heat resistance with ambient temperatures over 150°C.

The built-in stress relieving contours eliminate electrical discharges in the corona-prone areas. The connectors come with three basic types of contacts. The contacts are both riveted and heat fused for strength and reliability. The contacts themselves are available separately for OEM applications.

The connectors adapt perfectly to JI-22 or JI-25 anode ball contacts. Capabilities range from 5 KV to 30 KV.

NEW FROM CATON

PRINTED CIRCUIT BOARD CONNECTORS

EC SERIES

Caton manufactures hundreds of connectors in the EC series. They presently hold license to produce this line of Burndy connectors.

The models shown are typical. They are availabie in mineral filled diallyl phthalate per MIL-M-14F, type MDG. The contacts are phosphor bronze with hard gold plating in accordance with applicable military specification. These come in 10, 15, 18, 22 contacts.

Caton now manufactures many styles, sizes and custom applications. Contact us for your requirements.

CORONA FREE CONNECTIONS

GeeWee* ROUND WIRE FLAT CABLE CONNECTORS

CF006 PCB CONNECTORS Permanently connects cable to printed circuit board.	• For connecting cable with up to 50 conductors • Connections can be inspected before cover is applied • No cable stripping necessary • Utilizes patented CW contacts	Sizes are available for terminating flat cable having 10, 20, 26, 34, 40 or 50 round conductors. Cover with integral strain relief and lip for protection of bare ends of wires is standard; cover without lip that permits wire to pass freely through connector (daisy chaining) without interference from protective lip is also available.
CF008 SOCKET CONNECTORS Connects to cable and provides female socket nose to mate with headers CN711 and CN712, or to properly oriented pins permanently fastened to a PC board.	• For connecting cable with up to 50 conductors • Connections can be inspected before cover is applied • "T" Bars on cover simplify assembly and disassembly • Utilizes patented CW contacts	For terminating cable with 10, 20, 26, 34, 40, and 50 conductors. Designed for rapid connect/disconnect of cable to two rows of .025" square or round posts on .100" x .100" centers. Cover variations include a self-locking cover with built-in strain relief for termination of conductor ends (standard); also available is a cover for intermediate connections that permits conductor cable to pass through connector (daisy chaining).
CN711 & CN712 HEADERS For quickly connecting cable that is terminated with female socket CF008. Has posts for soldering to PC board or wire wrap.	• Accepts connectors with up to 50 contacts • Side guides assure correct alignment of mating connectors • Posts can be soldered to PC boards or wire wrapped	Headers available to mate with CF008 sockets terminating 10, 20, 26, 34, 40, or 50 conductor cable. Each has two rows of .025" contacts that are straight through or bent at 90°. End of contacts opposite to socket mating end are .025" x .025" square pins for wire wrap termination, or .025" diameter round pins usually wave soldered permanently to PC board. Protective lip prevents damage to contacts when not in use. Available with latches that lock headers to mating CF008 sockets.
CP200 DIP CONNECTORS Permanently connects flat cable to printed circuit board having holes on standard DIP spacing, or with connect/disconnect provision to I.C. socket.	• Cover ridges assure proper cable alignment • Cover preassembled to connector base at factory to simplify handling • Numbered positions simplify solder post identification • Utilizes patented CW contacts	DIP (Dual in-line package) connector for terminating 14, 16 or 24 conductor cable. Provision for connect/disconnect into I.C. socket or permanent wave solder termination to mating PC board. Preassembled cover permits rapid termination with simple hand tool.
CF100 CARD EDGE CONNECTORS  Connects/disconnects flat cable with etched conductive lines on edge of 1/16" thick PC board.	• Accepts cable with up to 50 conductors • Contacts are bifurcated for maximum integrity of connection • Cantilever contact will operate with up to .075" PC board thickness • Utilizes patented CW contacts	Sizes available for termination of 10, 20, 26, 34, 40, and 50 conductor strip cable. Standard connector includes integral strain relief. Available with or without mounting ears.

CW Industries has extensive experience in wire cutting, terminating, assembly and testing of flat/cable connector assemblies. Send us your inquiry for special harness requirements. We will also quote on any other flat cable/connector requirements that you may have.

For additional information send for Technical Bulletin 2101.

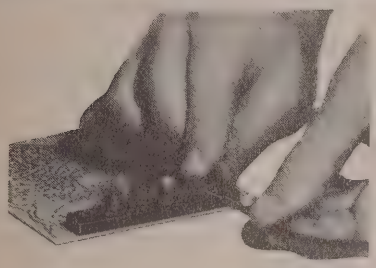
SPECIALISTS IN INNOVATIVE AMERICAN MADE CONNECTIONS

WE WANT YOUR PROBLEMS!!!

Your connection problems, that is

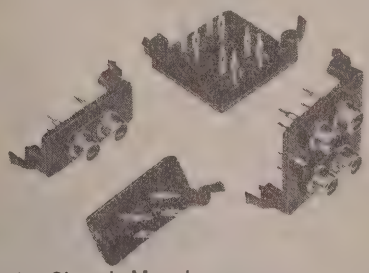
Here are just 4 cost-saving design solutions Connector Corporation came up with to meet customer's packaging needs. (Sorry there's not enough space to show you the other 5,000+ answers C/C has created).

DESIGN ANSWER NO. 1



Series 950 Wyrlok Receptors. Note quick, easy, simple connect/disconnect. To connect, press, insert, release.
To disconnect, just press, remove wire, release.
No crimping, soldering, wire wrap, welding, wire attachments, screwing down, tools or bonding materials required to obtain a firm electrical or mechanical connection. Long, useful life because wear is almost non-existent.
Save space, energy, labor, material & time on your production line.
Quick, easy serviceability. For disconnecting, there is no destructive heat or unsoldering, no destructive detaching of crimped, welded or riveted joints, no loosening of screwed down joints with screwdrivers. Just press, remove wire, release.
1, 2, 3, 4, 5 or 6 Wyrlok Receptors offered on a single strip of UL approved (94VO) flame retardant thermo-plastic material.
Innumerable applications. Replaces many less efficient methods currently used in accomplishing electrical, electromechanical or mechanical connections in instrumentation, computer software, electronic & TV games, pinball games, TV, stereo, telecommunications, switching equipment, ground support equipment, speakers, prototype breadboards, appliances, CB, fibre optics, batteries, automotive, medical electronics and many others including yours.

DESIGN ANSWER NO. 2

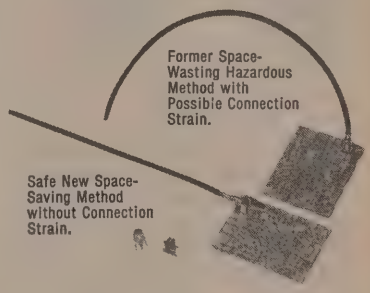


Up to *tenfold* more connects / disconnects with Types 1070-01 (quad) & 1070-02 (dual) Precision Audio Connector Sub-Assemblies for PC Boards and/or Chassis Mount.
Your assembly line costs are reduced because these connector sub-assemblies mount directly to the pc board. In contrast, conventional audio jacks must 1) first be mounted to the chassis, then 2) individually wired to the pc board.
Eliminated entirely are costs for wire, solder and labor for mounting pc board to chassis, rather than interconnecting each and every socket and pc board with soldered wire jumpers.
Minor "last minute" circuit design modifications on your assembly lines are now practical and easily done. Solder holes in tails permit soldering "after thought" resistors, condensers and other electrical components to the tails.

DESIGN ANSWER NO. 3

Eliminate CRT Damage with Miniature Type 546 7-Pin Socket with Special Spark Discharge Device.
Prevents costly damage to CRTs from voltage surges and circuitry breakdown.
Mates with JEDEC E7-91 tube base having .040 dia. pins on a .375 pin circle. Socket also available without spark gap.
Applications in computer & computer related industries, TV, automotive analytical industry, and other information displays.

DESIGN ANSWER NO. 4



Former Space-Wasting Hazardous Method with Possible Connection Strain.
Safe New Space-Saving Method without Connection Strain.

Space-Saving Type 107E65-4 Right Angle RF/Audio Connector with Quick Connect/Disconnect for Coaxial Cables & Twin Leads.
Gives packaging designer CHOICE of vertical OR horizontal pc board placement in limited spaces without bulky wide loop cable, making possible a more compact packaging design.
No connection strain as in wide looped cable to open up plug skirt and cause poor or failing electrical connection.
Applications in electronic games, CBs, stereos, monitoring equipment, communication equipment, etc. where conventional design sockets cause bulky cable looping, wasting packaging space.

USE OUR HIGH VOLUME METAL STAMPING & MOLDING DEPARTMENTS FOR YOUR PRODUCTION REQUIREMENTS

- Close tolerances are routine.
- All dies & molds completely designed & made in our own fully equipped tool & mold facilities by skilled craftsmen.
- Time-saving, flexible — even if changes occur during a high production run. Faster, more efficient because everything handled in-house.
- Available independently or as part of your connector order.
- Proficiency in a wide variety of metal alloys & molding compounds.

Would you like the next cost-saving answer for *your* problem? Our Engineering Department, in readiness to help, awaits your call.

CONNECTOR CORPORATION

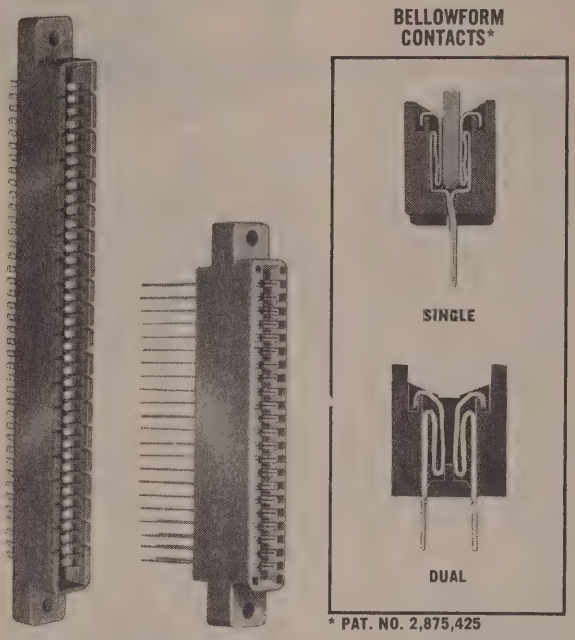
SPECIALISTS IN INNOVATIVE AMERICAN MADE CONNECTIONS

CONTINENTAL CONNECTORS

Precision Electronic Connectors For Commercial & Military Applications

SERIES 600 CARD-EDGE CONNECTORS FOR PRINTED CIRCUITRY



* PAT. NO. 2,875,425

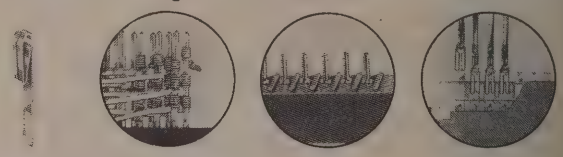
Connector body molding material is made of a variety of compounds such as Diallyl Phthalate, for commercial and military applications. Contacts are gold plated phosphor bronze or beryllium copper with optional plating in accordance with all MIL SPECS or special customer requirements. These contacts, with "bellowform" construction, are durable and capable of withstanding thousands of insertions and withdrawals without failure; they are virtually indestructible.

Series 600 printed circuit connectors represent one of the most extensive lines of receptacle or card-edge types. A wide variety of single readout and double readout construction, with sizes from three to 210 contacts are available.

CONTACT CENTERS:
.050", .075", .100", .125", .140", .150", .156" and .200"

BOARD THICKNESS:
1/32", 3/64", 1/16", 3/32" and 1/8"

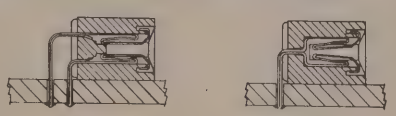
WIRING STYLES:
Eyelet lug for soldering, solderless-wrap terminations for wire-wrapping technique, contacts for dip or flow soldering and taper tab solderless wiring



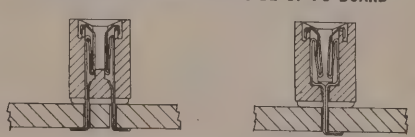
MIL SPECS:
Continental Printed Circuit Connectors meet or exceed applicable MIL-C-21097 specifications. They withstand a 50-hour salt spray test and ambient temperature range of −55°C to +125°C.

SELECTIVE PLATING — Continental's continuous process selective plating deposits an equal amount of gold on each contact. The contacts pass through various cleaning and plating baths, resulting in a controlled amount of gold uniformly deposited on the critical contact area. By plating gold on the contact surface only, selective plating automatically brings down your connector cost enormously.

PRINTED CIRCUIT APPLICATIONS

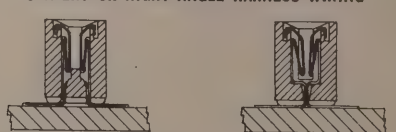


RIGHT ANGLE MOUNTING WITH CONTACTS FOR DIP SOLDERING TO UNDERSIDE OF PC BOARD



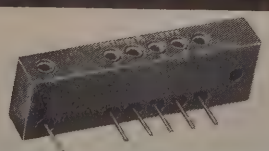
VERTICAL MOUNTING WITH CONTACTS FOR DIP SOLDERING TO UNDERSIDE OF PC BOARD

VERTICAL MOUNTING WITH CONTACTS FOR SRAIGHT OR RIGHT ANGLE HARNESS WIRING



VERTICAL MOUNTING WITH CONTACTS SOLDERED TO TOP SIDE OF PRINTED CIRCUIT BOARD

PC TEST POINT



SERIES 672. Provide conveniently located test points to check printed circuitry. Available with 4, 5, 6, 8, 10, 11, 20, 21, 28, 30, 42 and 63 contacts which grip and hold securely a standard .080" test probe. Connectors have recessed and floating pin terminals mounted at right angle to the test socket. Pins dip solder to printed circuit board.

SERIES 6100-200 and 6125-250. The most extensive line of printed circuit connectors for miniature wire wrapping in the industry. All densities from 2 to 200 contacts can be supplied . . . the most popular sizes being tabulated above. Available in two grid patterns — .100 x .200 (Series 6100-200) and .125 x .250 (Series 6125-250) with .025 square terminals true positioned to make these particularly suitable for automatic wiring techniques. Terminal lengths to exact customer needs for one, two or three wraps; or for flow soldering to boards of any thickness. Choice of mounting styles — thru hole, thd. inserts, floating bushing, flat bottom and without mounting "ears." Connector body molding material may be any of a variety of compounds for commercial and military applications. Contacts are gold plated phosphor bronze with optional plating in accordance with all MIL specs or special customer requirements.

Voltage Rating (sea level) — 1800 V. RMS (.100 spacing); 2100 V. RMS (.125 spacing) Current Rating — 3 amps continuous.

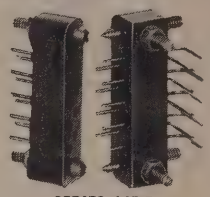
CONTINENTAL CONNECTORS

Precision Electronic Connectors For Commercial & Military Applications

RIGHT ANGLE SERIES PLUG & SOCKET TYPES FOR PRINTED CIRCUITRY

IN ACCORDANCE WITH MIL-C-55302, MIL-E-5400, MIL-C-28748 SPECIFICATIONS

.050", .100", .156", .200" CONTACT CENTERS



SERIES 145-5

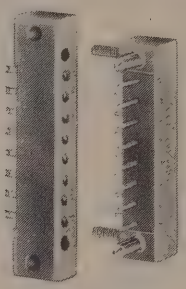
SERIES 145-5. 7, 9, 11, 15, 19, 23, 37 contacts. Solder cup on socket, dip solder pin for plug. For use in airborne electronic equipment in accordance with MIL-C-55302 specs.

SERIES 600-1-45. 17, 23, 25, 33, 41, 45 & 77 contacts on .050" center spacing. Right angle configuration of two and three rows of dip solder contacts.

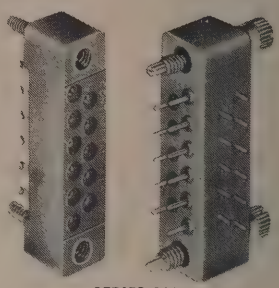
SERIES 600-1-50. 50 contacts on .100" center spacing.

SERIES 670. 4, 8, 10, 12, 13, 22, 28 single row contacts on .156" center spacing. Guide pins in plug and guide bushings in socket provide polarized mating of parts.

SERIES 683. 11,12,18, 19, 23, 32, 33, with polarizing screwlocks or guide-pins and guide sockets. Meet aircraft requirements for vibration and high altitude.



SERIES 670



SERIES 683

SERIES J RIGHT ANGLE OR STRAIGHT THRU WIRING — .050"/.100" CONTACT CENTERS

9, 11, 15, 21, 25, 31, 37, 51 CONTACTS

These plug and socket connectors are widely used in all electronic systems. Their size and rugged construction make them particularly adaptable to aircraft applications. They can be used for mounting on single or dual sided printed circuit boards of varying thickness. The contact configuration is excellent for flat cable use. Plug contacts are integrally molded into the rugged body material and are protected by a high strength, single piece molded shell of glass fiber reinforced phenolic. Molding configuration prevents mismatching of plug and socket.

Socket contacts are wire crimp removable and free floating. They feature a self-wiping action that eliminates the need for precious metal plating such as gold. Excellent conductivity and a low millivolt drop. Hoods are available.

ELECTRICAL AND MECHANICAL RATINGS:

Voltages	Breakdown	Recommended Test
At Sea Level	2000V. RMS	1325V. RMS
At 70,000 Ft.	400V. RMS	300V. RMS

Current Rating: 3 Amps Continuous ..... 5 Amps Max.
Minimum Creepage Between Contacts ..... .047"
Minimum Air Space Between Contacts ..... .047"
Male Contact Pin Diameter ..... .030"
Crimp Barrel for Socket Contact: Accommodates #22, #24, #26 AWG Wire

NOTES:

1. Body Material: Glass fiber reinforced phenolic Type MFH per MIL-M-14.
2. Contact Material: Copper alloy, gold plated.
3. Socket contact 2500-S2A22-39 must be ordered separately.
4. For electroplated tin contact add suffix "SN" to connector part number (J21P90-15-SN).

CONTINENTAL CONNECTORS

Precision Electronic Connectors For Commercial & Military Applications

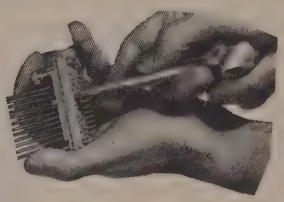
RACK AND PANEL CONNECTORS FOR VARIOUS EQUIPMENT

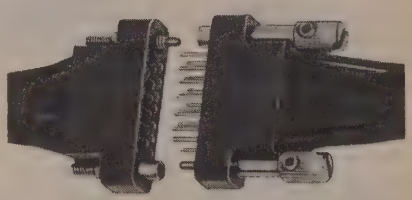
A complete line of high-reliability connectors for computers, missile, aircraft, communications and other critical electronic applications. In addition to standard specifications, these connectors can be supplied with such optional accessories as aluminum hoods, protective shells, polarizing screwlocks* and solder filled contacts. Various molding compounds are also available.

* PATENT NO. 2,746,022

MICROMINIATURE AND MINIATURE WITH CRIMP REMOVABLE CONTACTS

AVAILABLE WITH 7, 9, 14, 18, 20, 26, 34, 42, 50, 66, 75, 104 & 152 CONTACTS CONFORM TO MIL-C-28748 SPECIFICATIONS





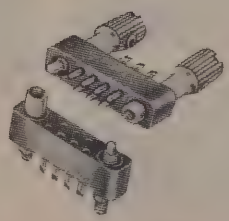
Continental Connector's removable contacts and wire crimp terminations eliminate all connector soldering operations. Contacts are supplied separately and wired independently of connector body, and can be readily replaced with simple, low cost hand tools. Connectors are available with guide pins and sockets or screwlock hardware.

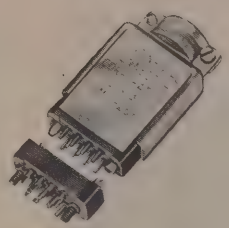
SERIES 25. Removable contact connectors are interchangeable with our Series 20 fixed contact types. .025″ and .045″ square solderless-wrap terminations with .062″ or .040″ pin diameters are also available. Optional aluminum hoods, protective shells and mounting plates can be supplied. Shielded crimp removable contacts for RG-178B/U and RG-196A/U coaxial cable can be intermixed in any combination with the standard type contacts. Select guide pins and sockets or polarizing screwlocks for mating hardware.

SERIES MMM. Five thru 75 contact sizes. Interchangeable with Series MM-22 fixed contact types. Can be supplied with guide pins and guide sockets, polarizing screwlocks and aluminum hoods.

SERIES 25MM. Center screwlock locking device. Available with 50, 76, 100 and 200 contact sizes. Contacts are on .100″ centers.

FIXED CONTACT MICROMINIATURE, SUBMINIATURE, MINIATURE





SERIES MM-22 MICROMINIATURE. Five to 104 contacts. Ruggedized to withstand shock and vibration extremes. Meet MIL-C-28748 specs or commercial type. Available with guide pins and guide sockets, polarizing screwlocks, cable brackets and aluminum hoods.

Breakdown Voltage (sea level), 2000V. RMS • Current Rating, 3A • Minimum Creepage Between Contacts, .070″ • Minimum Air Space Between Contacts, .040″ • Contact Center Spacing, .093″ • Pin Diameter, .030″ • Solder Cup, #22 AWG wire.

SERIES SM-20 SUBMINIATURE. Five to 104 contacts. Meet MIL-C-28748 specs or commercial type. Optional features include guide pins and guide sockets, polarizing screwlocks, protective shells and aluminum hoods.

Breakdown Voltage (sea level), 2000V. RMS • Current Rating, 5A Continuous, 7.5A Maximum • Minimum Creepage Between Contacts, .078″ • Minimum Air Space Between Contacts, .045″ • Contact Center Spacing, .125″ • Pin Diameter, .040″ • Solder Cup, #20 AWG wire.

SERIES 20 MINIATURE. Five to 104 contacts. Similar to above except larger size. Meet MIL-C-28748 specs or commercial type. Hexagonal configuration with 1, 4, 5, 7, 9 and 10 contacts is also available.

Breakdown Voltage (sea level), 3000V. RMS • Current Rating, 5A Continuous, 7.5A Maximum • Minimum Creepage Between Contacts, .125″ • Minimum Air Space Between Contacts, .070″ • Contact Center Spacing, .150″ • Pin Diameter, .040″ • Solder Cup, #20 AWG wire.

CENTER SCREWLOCK

SERIES 1900. 10, 22, 34, 50, 78, 104 and 152 contacts. Double lead thread action screwlock, stainless steel side channels and closed entry contacts for maximum reliability. Series 2500 available with 152 removable contacts.

Breakdown Voltage (sea level), 3000V. RMS • Current Rating, 10A Continuous, 13A Maximum • Pin Diameter, .062″ • Minimum Creepage Between Contacts, .110″ • Minimum Air Space Between Contacts, .050″ • Contact Center Spacing, .150″ • Solder Cup (also solderless-wrap and taper pin) #16 AWG wire.

BUCHANAN® I/O CONNECTORS

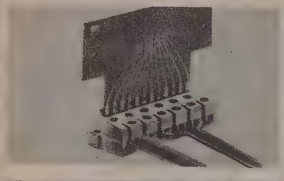
Input to Output...using only a screwdriver! Save up to $30.00 per PC card (materials and labor) with the BUCHANAN I/O System.

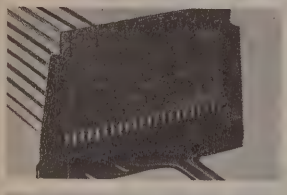
PC BOARD CONNECTORS

6 Standard Designs for *direct* connection of system wiring to system PC Boards.

- replace conventional edge connectors — eliminate up to 5 connections per circuit . . . no "mongrel" interfacing
- no soldering, crimping, wirewrapping, wire terminations — only a screwdriver needed.

Same basic design features as PCB1, 2, 3, but accepts 36-circuit double-sided PC boards . . . unique temperature-stabilization option . . . bifurcated, cantilever contact design . . . 0.156" CL spacing.



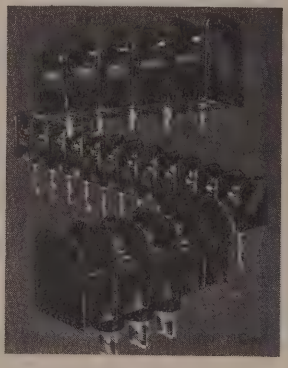


Combines barrier strip convenience with PC board plug-in efficiency . . . tri-barrier design for safety . . . accepts #22–#12 AWG wire sizes, unterminated or with ring or spade lugs . . . 45°-angle contact screws, with or without captive clamps, facilitate wiring . . . 300 V, 10 A/circuit . . . 8 circuits/connector standard . . . 0.375" CL spacing . . . provision for 2 mounting planes.

UL Component Recognition for field wiring . . . funneled wire entry . . . captive contact screws . . tubular-clamp wire contacts . . . high-pressure tuning fork contacts . . . 0.156" and 0.200" CL spacing . . . up to 44 circuits per connector, #12–#30 AWG wire sizes.

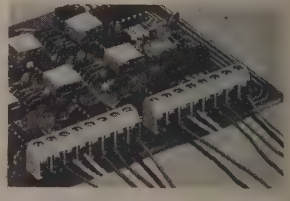
SINGLE-SCREW BARRIER BLOCKS

for PC board and panel applications.



- UL Component Recognized for field wiring; CSA Certified
- 2 standard contact spacings:
  SSB6 — 3/8" CL, 300 V, 20 A/circuit, up to 32 circuits
  SSB7 — 7/16" CL, 600 V, 20 A/circuit, up to 27 circuits
- wire sizes: one #12–#30 AWG or two #16–#30 AWG
- 3 base options (closed, flat, turret)
- 7 bottom terminal options (non-feed-through, circuit board, extended circuit board, wire wrap, right-angle wire-wrap, quick-connect, solder tail)
- screw, quick-connect, and solder-tab top-terminals
- 6 circuit identification options
- complete accessories selection

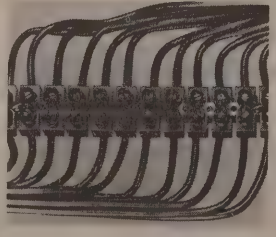
- vertical and right-angle-mounting configurations for installation flexibility
- tri-barrier wire enclosures for safety
- #12–#30 AWG wire sizes; 300 V, 15 A/circuit
- up to 36 circuits per block; .375" CL
- 7 bottom-terminal options (non-feed-through, 3 vertical, and 3 right-angle)
- screw, quick-connect, and solder-tab top-terminals
- 8 circuit identification options
- complete accessories selection



Miniature, high-density, box-contact terminal strips for PC boards with severe space limitations.

- height only 0.4" (10 mm) above mounting surface
- 0.197" (5 mm) pin spacing
- 100 V, 13 A/circuit; accepts #14–#22 AWG wires
- strips for 2, 3, 4, 5, 6, 8, 10, 12 circuits

DOUBLE-SCREW BARRIER STRIPS



- high circuit density
- 5 twelve-circuit models for #4 to #20 AWG wire
- 380 V, 20 A/circuit up to 500 V, 70 A/circuit ratings available
- mounting holes between each two circuits
- contact screws and wire contacts recessed for "dead-front" safety
- non-breakable, flexible polyethylene easily cut into fewer-circuit strips
- tubular contacts accept stripped solid and stranded unterminated wire

*For a complete Engineering Management Report on how the BUCHANAN I/O System achieves two major objectives — substantial cost reduction and significant product enhancement — plus complete data on these BUCHANAN I/O Connectors, call our nearest Regional Information Center (listed below).

DALE ELECTRONICS, INC., East Highway 50, Yankton, South Dakota 57078. Phone 605-665-9301

PRINTED CIRCUIT

DALE TYPE		BASIC DESCRIPTION
EBT 156 Edgeboard		Single readout modified tuning fork contacts with .156" spacing. For 1/16" boards. 6 to 22 contacts.
EB 7 Edgeboard		Choice of single or dual readout models with .156" x .140" grid spacing. Accepts card thicknesses from .054" to .071". 6 to 22 contacts.
EB 8 Edgeboard		Dual readout with .156" x .200" grid spacing. Accepts .054" to .071" card thicknesses. Choice of body materials. 6 to 25 contacts.
ES 1 & ES 5 Digital Display Connector		Single readout digital display connectors. Permit custom variations in substrate length, width, and number of contacts without tooling charge. Substrate lengths from 1.000" to 6.000".
ED 1 & ED 5 Edgeboard		Dual readout edgeboard connectors. Permit custom variations in substrate length, width and number of contacts without tooling charge. Substrate lengths from 1.200" to 4.500".
300 Dip Solder		Right angle or straight through terminals. 7 to 25 staggered contacts with .250" spacing (.125" grid). Meets applicable paragraphs of MIL-C-28748.
303 Dip Solder		45 contacts in compact 3-row design. Meets applicable paragraphs of MIL-C-8384.
315 Dip Solder		50 contacts with .200" spacing. Staggered rows provide a .100" grid.
PJ Test Point		Right angle or straight through types with dip solder pin for permanent mounting.
500SR5 Test Point		One-piece molding with 5 dip solder contacts for permanent mounting.

RANK AND PANEL

MM22, MM24 Microminiature		Choice of solder cup or dip solder contacts. 5 to 44 contacts with .09" spacing. Meets MIL-C-8384. Available with or without hardware.
SM20 Subminiature		Compact, lightweight. Fixed or turnable screwlocks. 5 to 75 contacts on .12" spacing. Meets MIL-C-8384.
S20 Housed		Lightweight. Protective housing and hood. For RF and power interconnect applications.

SIDE MOUNT

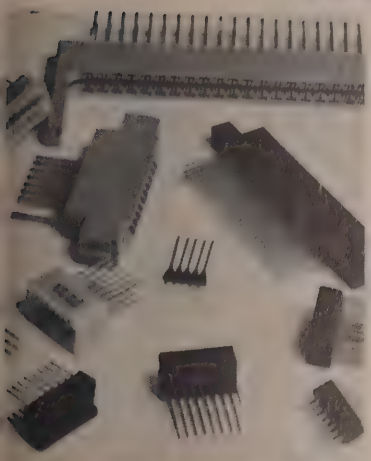
A20		Body components available with any desired pin and socket combination. Floating contacts. Hole through body permits flat or building block type mounting. Meets applicable paragraphs of MIL-C-8384. Special locking device on G16.
G20		
G16		

SPECIALS

QX32 QX72 & MX72 400 & 401		Umbilical and round keyed shell types.

ELECTRONIC CONNECTORS AND INTRACONNECTION SYSTEMS

ELECTRONIC CONNECTOR PRODUCTS



CONNECTORS & SOCKETS,
Standard or Custom

Dynatech proprietary fabrication and high volume assembly techniques offer low cost production of precision P.C. card edge connectors with 0.100", 0.125", 0.156" or 0.200" contact spacing and 14 or 16 pin DIP sockets. Custom designs to customer specifications.

EXCLUSIVE "ZIP" GOLD PLATING

Dynatech exclusive contact plating process reduces gold use up to 90% compared to conventional techniques. "ZIP" puts high density 23K gold on the contact surface where it's needed in thicknesses of 10 to 100 millionths. Nickel underplate available, but not required.

Exclusive Dynatech "ZIP" plating process puts gold on contact surface where it's needed, thus eliminating wasteful plating of non-contact surfaces.

INTRACON BACKPANEL INTRACONNECTION SYSTEMS

ALUMINUM BACKPANELS

Dynatech aluminum backpanels reduce external wiring using standard connectors and insulated layers for various voltage or grounding intraconnections. They also offer the versatility of mixing several connector types.

PRINTED CIRCUIT BACKPANELS

Dynatech two-sided and multilayer backpanels will intraconnect several random voltages and reduce external wiring. They use friction fit contacts that can simultaneously connect several plated-thru holes. Minimum thickness for the P.C. board backpanel is 0.125".

MICROPROCESSOR BACKPANELS

Dynatech backpanels simplify use of microprocessors such as Intel's, Motorola's and National's. Many standard configurations are available, but custom designs can be created from either aluminum or printed circuit backpanels.

TELEPHONE CROSS CONNECT BACKPANELS

Dynatech Cross Connect systems save cable, cut space 50% or more and reduce craftsman wiring time. Systems are directly interchangeable with accepted telecommunication systems.

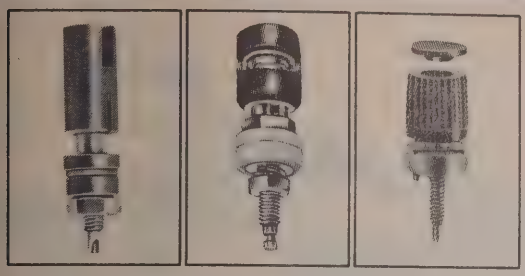
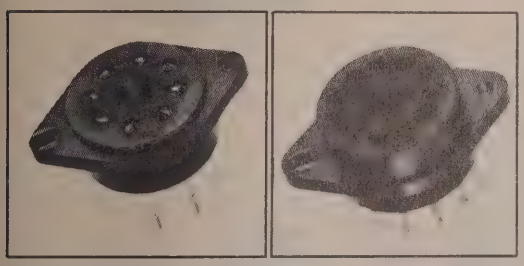
BINDING POSTS . . . TEST POINTS . . . SOCKETS



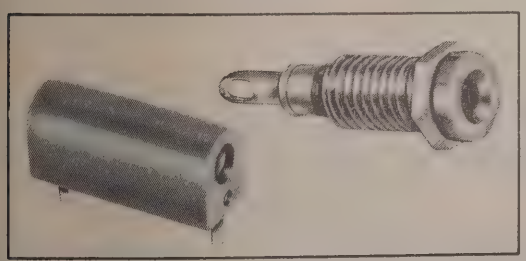
MILITARY BINDING POSTS, WATERPROOF BINDING POSTS, PANEL MOUNT BINDING POSTS

Eby produces more waterproof and panel mount binding posts per MIL-P-55149 than any other supplier. Binding posts are also available for commercial and industrial applications. They are supplied in panel mount, screw, and spring-activated.



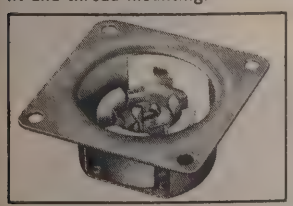
RELAY SOCKETS, ROUND, 8 CONTACT AND 11 CONTACT

8 and 11 contact relay sockets; molded integral saddles; rugged proven reliability; commercial prices.



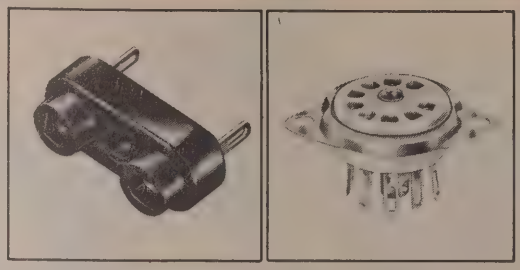
TIP JACKS

Tip jacks and test points per MIL-C-39024; plastic bodies; metal sleeves; screw machine and sheet metal contacts; press fit and thread mounting.



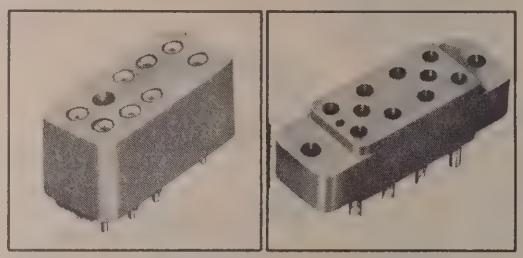
SPECIAL SOCKETS, POWER TUBE SOCKETS

Special and custom designed sockets and plugs, built to your specifications.



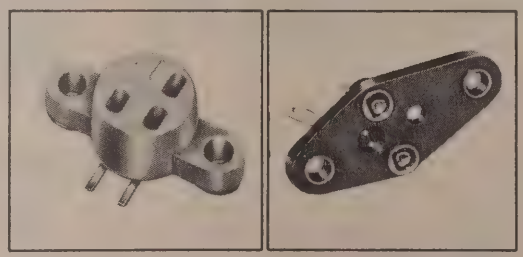
CRYSTAL SOCKETS, TUBE SOCKETS

Crystal and tube sockets; ceramic and plastic; Eby supplies more Q.P.L. listed sockets per MIL-S-12883 than any other manufacturer — the only listed supplier! 7 to 9 pin tube adaptors available.



RELAY SOCKETS, RECTANGULAR, 8 CONTACT AND 10 CONTACT

Military approved rectangular relay sockets, printed circuit and panel mounted.



TRANSISTOR SOCKETS

A broad line of transistor sockets, TO-66, TO-3, TO-5, etc., low cost commercial and industrial applications.

CONSIDER YOUR CONNECTION

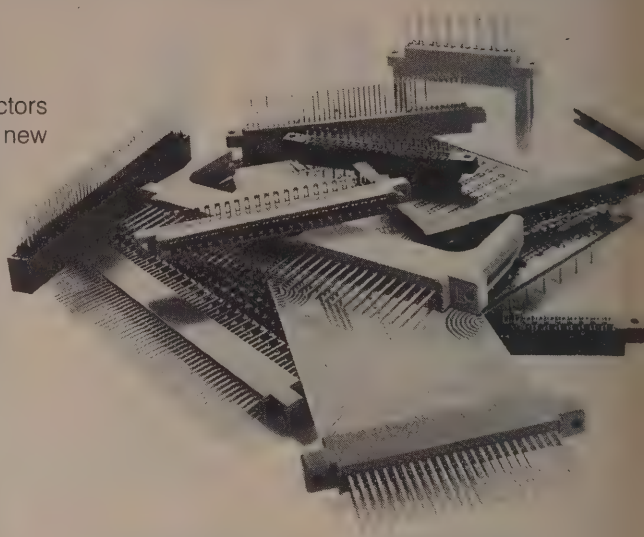
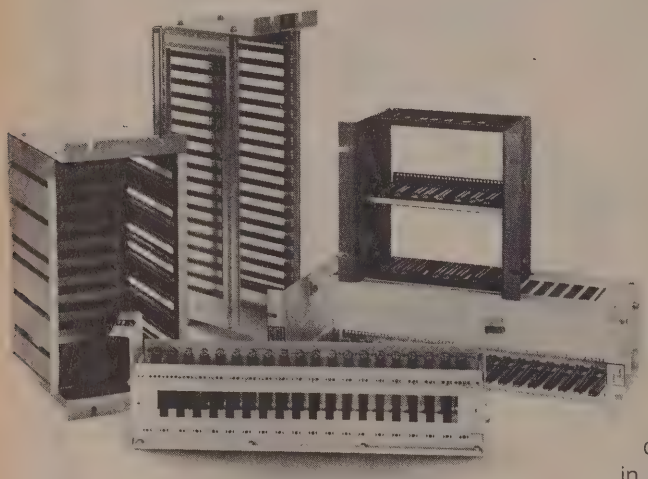
Proven problem

CARD EDGE CONNECTORS

Elco has been the supplier of reliable card edge connectors for years. Now additional sizes in the standard line and a new line of wire-wrappable connectors with .156″ centers are offered. All standard contact spacings from .100″ to .156″ for all termination techniques are available including QPL, military qualifications to MIL-C-21097/21 and UL recognition. And they're immediately available from your local distributor.





PC CARD ENCLOSURES

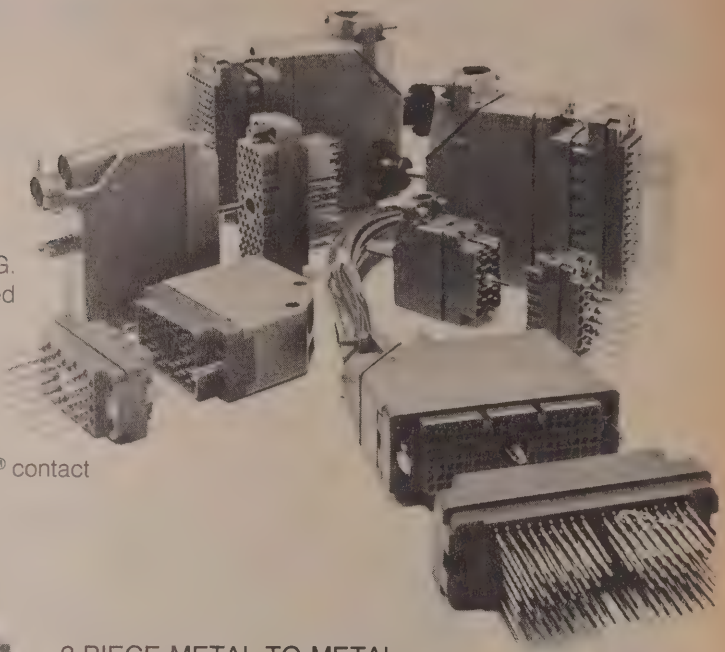
The versatile Varipak® II card enclosures are constructe from standard components and will accommodate any number of cards and card sizes to meet your custom re quirements. They come complete with guide plates, car guides, and connector mounting panels. Your local distributor offers immediate delivery on 64 standard models in 19″ and 24″ widths.

BACKPANEL SYSTEMS

Are you looking for compact, ready-made backpanel interconnects for your daughter cards to reduce costs? Elco offers metal plate backpanels with pc connectors for automatic and hand wire wrapping which provide built-in ground and voltage interconnections. To further simplify your task and eliminate wire wrapping, Elco offers pc backpanels in two sided and multilayer configurations providing all ground, power and signal interconnections for mounted card edge or metal-to-metal connectors with contact spacings from .100″ to .156″. All backpanels are custom engineered to fit your exact needs in sizes accommodating as many as 20,000 contacts.

Elco Connects!

solvers from Elco



/O AND RACK AND PANEL CONNECTORS

Meets every i/o wire size requirement from 18 to 30 AWG. They feature easy mating/unmating and locking of mated connectors with a single jack screw operation. High-density contact spacings range from .100" to .150" grids, with 20 to 165 contacts with solder, crimp, wire wrap and other terminations. Lightweight aluminum covers are available for cosmetic appeal, wire clamping and strain relief. They utilize the Varicon™ contact which has a 25 year record of reliable service.

2-PIECE METAL-TO-METAL PC CONNECTORS

For the user, who needs the most reliable card-to-card connection, end-to-end, at right angles or stacking connections, we offer the greatest variety of metal-to-metal contacts and connectors available anywhere. Expect off-the-shelf delivery from our distributors on most configurations that include .050" staggered, .100" to .200" spacing, 1 to 96 contacts, various termination styles, with or without card guides and hardware for most any application. Most are mil spec, QPL and UL recognized. Connections are made by our Varicon™ contact providing hermaphroditic, gas-tight joints with millions of operating hours proving their reliability.

LCO CORPORATION'S catalogs are available upon request r any of these products. In most cases, these products are mediately available from distributor stock. For custom products engineering assistance, we'll be glad to help you. Just call us, co connects . . . worldwide!

Heavy Duty Cylindrical

MIL-C-22992

CUSTOM CABLING

DESIGN CHARACTERISTICS

- **Heavy duty, largest size** cylindrical
- **Current ratings to 200 amps**
- **Environmental resistant**
- **Quick mating, vibration resistant** threaded coupling incorporating
- **Easily maintainable** double stub thread

CUSTOMER OPTIONS

- **Nine mounting styles** to accommodate power and control circuitry
- **Eighteen shell sizes** from 10 through 52
- **Wide assortment of contact arrangements** - accommodating from 1 through a maximum of 104 circuits
- **Solder or crimp contacts**
- **Sizes 20 to 4/0 contacts** accepting wire sizes 20 through 4/0 AWG
- **Designed for use with jacketed cable**
- **Alternate positioning**

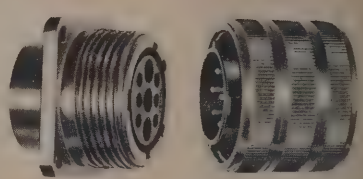
1

CLASS "L"

1. Highly suitable for industrial or military applications and is designed to meet demands of heavy power interconnections in current ranges of 40 to 200 amps. As safety is an all important factor, the connectors are designed with a programmed coupling sequence to provide making of grounded or neutral circuits prior to mating of power circuits. At unmating, the power circuits are broken before the ground or neutral. A unique arc quencing capability also provides a positive safety feature if the connectors are inadvertently disconnected under load. A 5 key polarizing system is used to assure that circuits with incompatible power characteristics (voltage, phase and frequency) cannot be mated. Cable lay patterns have been taken into account in the design of contact arrangements to facilitate termination of large conductors. Meets requirements of MIL-C-22992, Class L.

Catalog 12-052

2



QWLD

2. Heavy duty waterproof series with 5 key polarization for power and control circuits. Meets requirements of MIL-C-22992.

Catalog 12-052

QWL

An additional waterproof series, but with single key polarization. A more compact heavy duty connector, meeting the performance requirements of MIL-C-22992.

Brochure L-1080

3

CUSTOM CABLING

3. The Electrical Components Division maintains a custom cabling department to design and manufacture high quality cabling for industrial, aerospace, oceanic and military applications. Careful consideration is given to all aspects of a particular installation, with major emphasis given to environmental, reliability and cost requirements. Experienced engineering, model shop, and production personnel; complete molding, braiding, and fabrication capabilities, and a wide variety of tooling, are available to assist you with your cabling needs. If desired, cabling mockup service can be furnished. For further information, contact the Cabling and Special Products Group at the Sidney, N. Y. Plant.

Contact Sidney Plant for Referenced Catalogs.

Bendix **Electrical Components Division**

Sidney, New York 13838

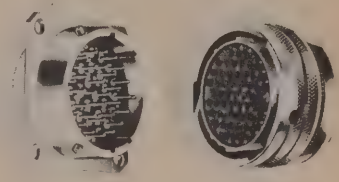
(607) 563-5325

MIL-C-38999, MIL-C-27599

DESIGN CHARACTERISTICS

1

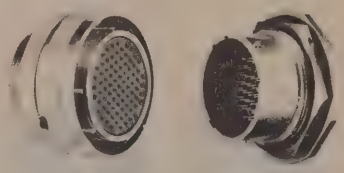
- **Lightweight, compact, hi-contact density** cylindrical
- **Operating voltage to 900 VAC (RMS)** at sea level
- **Environmental resistant**
- **Quick positive coupling** assured by three point bayonet coupling system
- **Visual confirmation** of complete coupling
- **Eliminates mismating** by the use of five key/keyway guide design
- **Error proof alternate positioning** insured by rotation of master keyway location during machining of shell



CUSTOMER OPTIONS

2

- **Five mounting styles** provide maximum flexibility in product design
- **Nine shell sizes** - 8 through 24
- **Fifty-six different contact arrangements** - to accommodate minimum of three circuits to a maximum of one hundred and twenty-eight circuits
- **Solder or crimp** rear release contacts
- **Size 22D to 12 contacts** accepting wire sizes 26 through 12 AWG
- **Eight finishes** provide protection in a wide variety of corrosive and mechanical environments
- **Coaxial (shielded) contacts** optional
- **Hermetic seal (glass fusion) receptacles**



JT, MS-JT

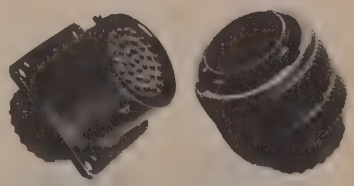
3

1. For applications requiring maximum weight/space savings and reliability. Also available in designs approved to MIL-C-38999 Series II (crimp termination) and MIL-C-27599 Series II (solder termination).

Catalog 12-090

LJT

2. Popular 100% "scoop-proof" (recessed pins) version of the JT family. Shell design is such that contacts cannot be bent or damaged by improper mating. The LJT offers maximum contact protection against bending and user aggressiveness. Also available in designs approved to MIL-C-38999 Series I (crimp termination) and MIL-C-27599 Series I (solder termination).



Catalog 12-090

SJT

4

3. A further expansion of the basic JT family, incorporating the LJT 100% scoop-proof feature and standard mounting dimensions of JT and Pygmy types.

Catalog 12-091

TRI-START*

4. Designed for severe vibration, temperature and moisture environments the Tri-Start completely mates in one full turn. Lockwiring is eliminated in this self locking, quick coupling connector. Superior EMI shielding is achieved through the combination of grounding fingers and solid metal to metal mating. Universal mounting holes for front or rear mounting, and locksmith metal keying for alternate positions come with the Tri-Start. Potential contact damage is minimized in this 100% "scoop proof" MIL-C-38999 Series III type connector. Threaded Coupling.

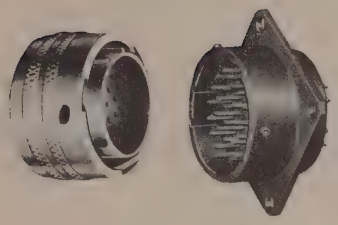
Miniature Cylindrical (Pygmy)

MIL-C-26482, MIL-C-83723

1



DESIGN CHARACTERISTICS

- **Medium size,** widely used cylindrical
- **Operating voltage to 900 VAC (RMS)** at sea level
- **Environmental resistant**
- **Quick positive coupling** assured by three point bayonet coupling system
- **Visual confirmation** of complete coupling
- **Eliminates mismating** by the use of five key/keyway design

CUSTOMER OPTIONS

- **Seven mounting styles** provide optimum flexibility in product design
- **Ten shell sizes** - 6 through 24
- **Solder or crimp** front and rear release contacts
- **Sizes 20 through 12 contacts** accept wire sizes 20 through 12 AWG
- **Six finishes** provide protection in a wide variety of corrosive and mechanical environments
- **Coaxial (shielded) and thermocouple contact** options
- **Hermetic seal (glass fusion) receptacles**
- **Threaded coupling series** available
- **Alternate positioning**

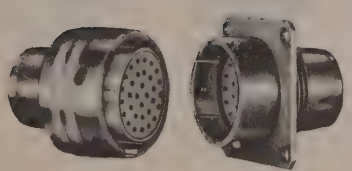
2

PT, MS-PT

1. Basis of popular "Pygmy" line, incorporating bayonet coupling and **solder** contacts. Also available in MS approved designs to MIL-C-26482, Service Classes E, F and P.

Catalog 12-070

3



PT-SE, MS-PT-SE

2. A derivative of the Pygmy line incorporating **crimp,** front release removable contacts with a metal clip retention system. The MS version is approved to MIL-C-26482 with MIL-C-23216 geometry contacts.

Catalog 12-070

PT-CE

3. Lowest cost Pygmy type connector, featuring **crimp,** front release removable contacts and a voidless one piece insert and grommet assembly offering continuous dielectric separation between contacts.

Catalog 12-070

Contact Sidney Plant for Referenced Catalogs.

Bendix Electrical Components Division

Sidney, New York 13838

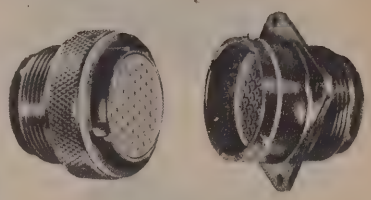
(607) 563-5325

PTS-DR, MS-PTS-DR

4. A series featuring the latest innovations in miniature cylindrical connector technology including **crimp** rear-release removable contacts, dielectric retention, electroless nickel plate, poly (amide-imide) inserts with "hard faced" closed entry socket design, and temperature capabilities to 392°F. Also obtainable as MS versions in accordance with MIL-C-26482 and MIL-C-83723.

Catalog 12-076

4



SP

5. **Solder** contacts and corrosion resistant hard anodic alumilite finish. Receptacles have been designed with enlarged flanges and mounting holes, providing for optimum back panel mounting.

Catalog 12-070

SP-SE, SP-CE

Features of the SP, SE and CE type connectors are merged to offer **crimp**, front release removable contacts with either metal or non-metal contact retention, in a corrosion resistant bayonet coupling design.

Catalog 12-070

5

PC

6. An additional derivative of the Pygmy line with double stub thread coupling, **solder** contacts and single key polarization. The series will meet the performance requirements of MIL-C-26482 and MIL-C-83723.

Catalog 12-070

PC-SE, PC-CE

Threaded coupling and **crimp**, front release removable contacts. Engineered for applications requiring a threaded coupling and the convenience of crimp contacts.

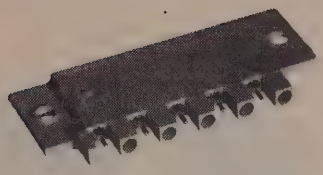
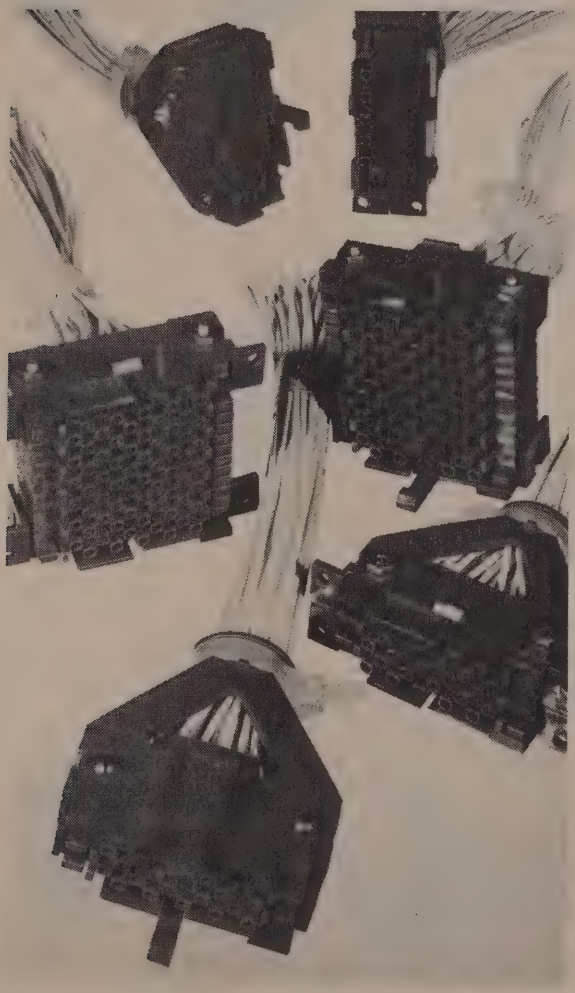
Printed Circuit Board

B^3 modular "building block" low mating force





- FUNCTIONAL PROTOTYPE/LABORATORY TOOL
  the B^3 module is intended for long term work table or lab use
  rear release, rear removable, replaceable, low mating force contacts, using standard application tools
  removable, replaceable components

- REAL FLEXIBLITY FOR THE DESIGNER/PROTOTYPER
  build your own low mating force modular connectors
  virtually unlimited combinations of X - Y axis growth, polarization, wire bundle strain relief
  assemble "as you need" modular buildups in Two Piece, Rack and Panel, Latchable Plug and Receptacle, or PCB Input/Output Connector configurations
  low mating force interconnection innovation at a fraction of prototype cost
  prototype or breadboard interconnections can be changed with a minimum of expense and lost time
  crimp or PC stud termination
  contacts on .100 inch center to center spacing, square grid

- AVAILABLE IN A HANDY KIT
  to provide an inexpensive introduction to LOW MATING FORCE INTERCONNECTIONS.

Brochure SL-311

Contact Sidney Plant for Referenced Catalogs.

Bendix Electrical Components Division
Sidney, New York 13838
(607) 563-5301

Printed Circuit Board

B^3 bristle brush bunch low mating force

DESIGN CHARACTERISTICS

- 70 to 90% reduction in mating force. Only 1/2 ounce typical contact engaging and separating forces
- High circuit count interconnections to 400 contacts per connector
- Two, three and four row patterns, 10 to 100 contacts per row, in one contact per row increments
- Over 20,000 mating cycles with Bendix B^3 Bristle Brush Bunch contacts*
- 0.100 in. center to center contact spacing, square grid
- Superior electrical characteristics - redundant current paths, low constrictive resistance, stable time/life contact resistance, uniform current densities
- Serviceability - removable crimp contacts, repairable PC stud and solderless wrap contacts
- Board support structure reinforcing reduced
- High performance polyester dielectric moldings

CUSTOMER OPTIONS

- Variety of contact terminations and platings
- Accessories to suit latching, piloting and polarization variations
- Up to 256 keyed mating polarizations

MOTHER BOARD, DAUGHTER BOARD

1., 2. Two piece PCB Connector featuring crimp removable, PCB Stud or solderless wrap contacts in the MB Series and field repairable 90° PCB Stud contacts in the DB Series.

INPUT/OUTPUT

3. Rear release, rear removable crimp contacts for discrete wire cabling. I/O Connector Series mates with standard MB and PC Receptacle Series to provide external inputs/outputs.

PC

4. 90° PCB Stud contacts for side mounting on board. Mates with DB and I/O Series.

RF Connectors

MIL-C-39012, MIL-C-3655, MIL-A-55339

1

BNC, TNC SERIES MIL-C-39012

1. Small, lightweight and environmental characterize connectors in this series. In bayonet-lock or threaded coupling versions, the choice is yours, you get optional positive contact captivation and the new 30 second SQUARE-CUT assembly. Excellent electrical performance is available to 11 GHz at temperatures to 250°C with a rated 500 volts.

Square-Cut Brochure, SL-283

N SERIES MIL-C-39012

2. Designed for general purpose medium size RF Cable such as RG-8/U, this weatherproof, threaded coupling connector has a 1500 volt rating and an 11 GHz frequency limit.

TWINAX SERIES MIL-C-3655

3. Offered with bayonet-lock or threaded couplings and clamping or crimp-on hardware for twinax cable. Twinax is described as an insulated twisted pair contained in an outer shield which is limited to very low frequency signal applications because of high transmission losses above 10 MGz.

Polarized BNC Connector Brochure, SL-289

2

TRIAX SERIES

4. Offered with bayonet-lock or threaded couplings and clamping or crimp-on hardware for triax cable. Triax is described as an insulated center conductor contained in two concentric outer shields, insulated from each other, providing three separate cable conductor paths.

ADAPTERS MIL-A-55339

5. Between series and within series adapters are available for BNC, N and C Series connectors.

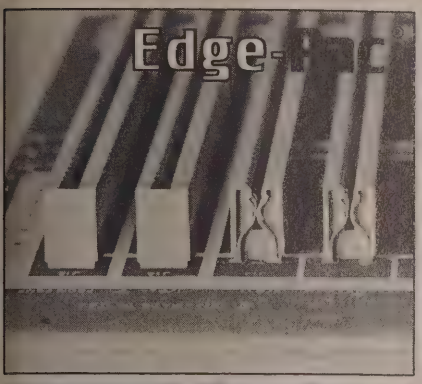
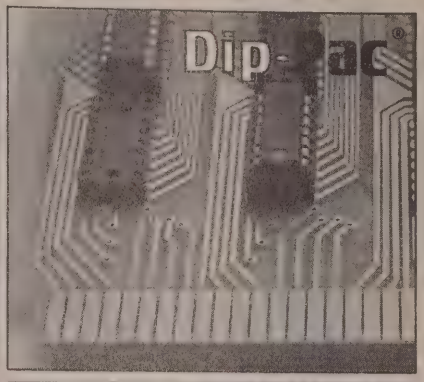
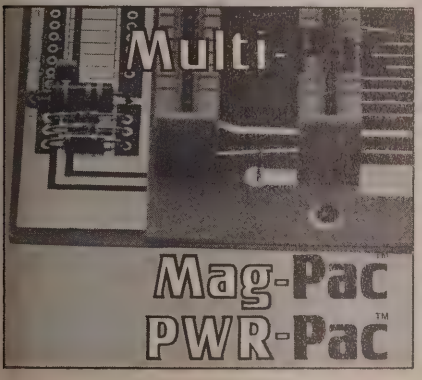
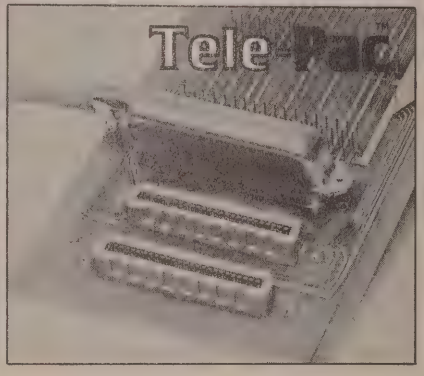
The leader in press-fit backpanels...









Patented backpanel concepts, plus complete in-house capabilities, give you low-cost reliability that's become the standard for the rest of the industry to shoot for.

Edge-Pac®
Patented card-edge backpanel is the springboard for the complete ELFAB line. Each system is custom designed for your special application.

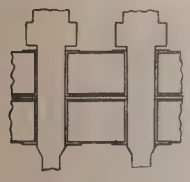
Multi-Pac®
- External wiring eliminated or reduced cuts cost.
- Up to eight planes of circuitry.

PWR-Pac™
- Pure copper planes for low voltage / high current applications.
- Outputs standard to your specifications.
- Circuit boards and planes in backpanel.

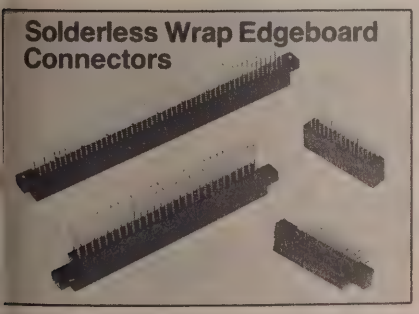
Mag-Pac™
- Similar to PWR-Pac, but with low-carbon steel planes for EMI shielding.

Dip-Pac®
- Dip socket receptacles with Edge-Pac or Multi-Pac design.

Tele-Pac™
- Can be mated with 25-pair telephone connectors.
- One, two or three board Multi-Pac assemblies.

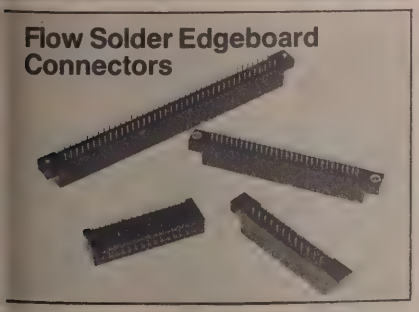


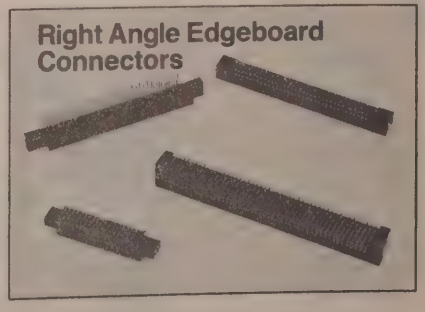
...and your best source for connectors.



Solderless Wrap Edgeboard Connectors
- .025" square termination.
- Bifurcated modified bellows type contact.
- Positive contact for low current loss, yet light touch for insertion / removal durability.

Flow Solder Edgeboard Connectors
- .100", .125", .150", & .156" spacing.
- For .062 PC board.





Right Angle Edgeboard Connectors
- .100", .125", .150" & .156" spacing.
- For .062 PC board.

Elfab — a dependable supplier
When you deal with Elfab, you can be sure that products will conform exactly to your specifications. Discuss your needs in existing or planned applications with us. Call or write your Elfab representative or distributor (connectors only) for complete information on the Elfab product line.

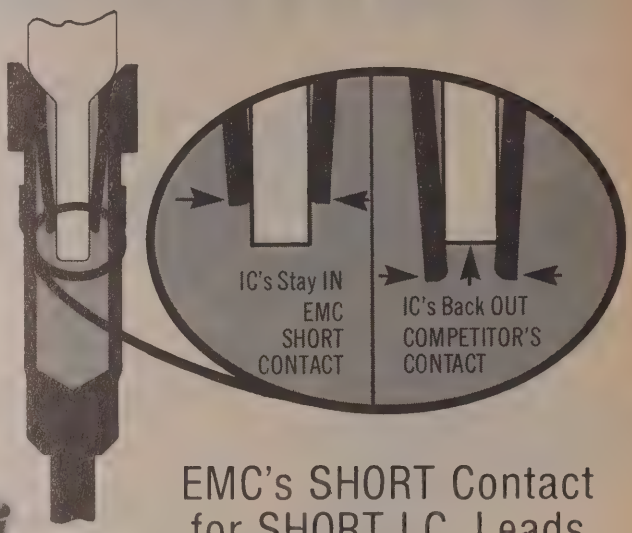
CUSTOMIZED WIRE-WRAP® PANELS
for any application...

Superior design and superb construction result in EMC's unsurpassed performance in pin-in-board packaging panels. The EMC line includes a wide selection of hi-density Wire-Wrap® panels, with input/output sections for male/female cable assemblies or plug-in edge connectors. EMC panels are available in 2 or 3 levels of wrap, with 12 to 180 or more positions. Five patterns are standard (14 or 16 pin, with V and G committed or uncommitted, plus universal). Board thicknesses of 1/8" or 1/16", as well as a variety of terminal plating styles, are available.

Custom panels are designed to reduce wrapping costs to an absolute minimum, to conform to special I/O requirements, and in layouts and shapes to complement existing systems. All EMC panels utilize patented* Nurl-Loc® Funnel-Entry terminals, recognized throughout the industry for superior holding power and ease of assembly. The Nurl-Loc design prevents twising during wrapping, and greatly simplifies terminal replacement, if needed. Most important, Nurl-Loc spreads stress evenly thoughout the board, resulting in flatter non-warping panels with more accurate true positions of terminals. The Funnel-Entry feature vastly simplifies manual or automatic I.C. lead insertion.

*U.S. Pat. No. D-223,109 Nurl-Loc® Electronic Molding Corp. Wire-Wrap® Gardner-Denver Co.

EMC
Interconnection Specialists



EMC's SHORT Contact for SHORT I.C. Leads

Many newer IC's have shorter or highly tapered leads. If plugged into longer standard contacts, lateral pressure caused by the angle of the contacts vector into a constant potential ejection force. Add a little vibration from nearby equipment, and out they come. EMC's new four-finger Short Contacts move the lateral pressure well up onto the body of the lead... grab and hold leads even .095 inches long. Specify Short Contacts in EMC's full line of sockets and packaging panels...field-proven for over a full year in actual usage.

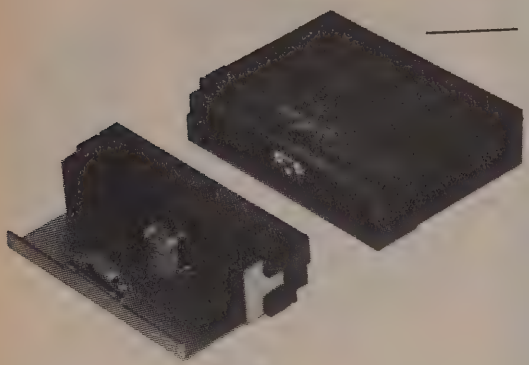
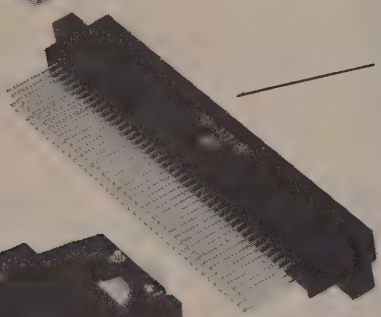
FUJITSU: CONNECTORS



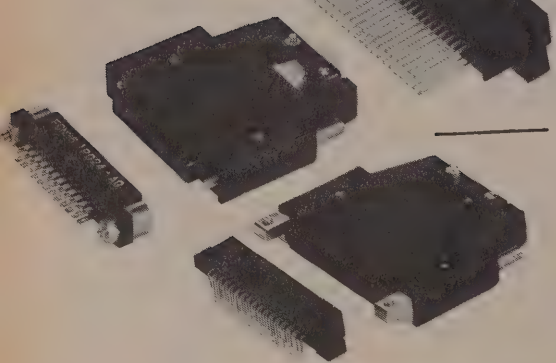
MULTI CABLE CONNECTORS
FCN120

High quality 48-position multi-cable connector matches pin for pin with IBM's Serpent Connectors and AMP's Amplimate Connectors. Gold-over-nickel finished contacts are positively locked into the housings. UL recognized glass-filled polycarbonate construction makes the Multi-Cable Connector heat stable, fire resistant and self-extinguishing. Current rating: 6A maximum. Accommodates wire sizes AWG #24 to #32.



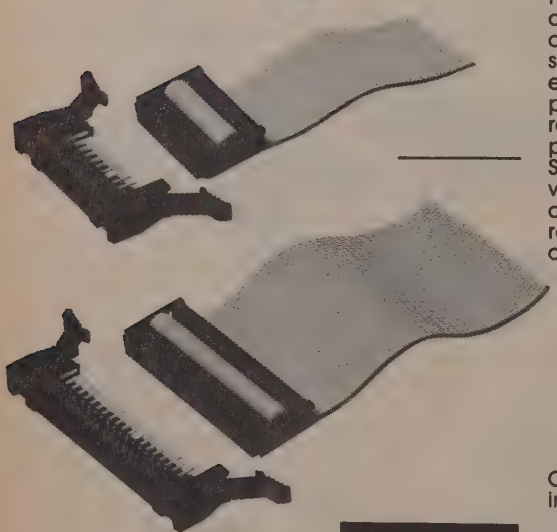
CARD EDGE PC BOARD CONNECTORS
FCN330

Twin gold plated contacts have .1 inch spacing and .2 inch row spacing. Solder plated terminals are suitable for either direct soldering or wire-wrapped connections. 3A at 300 Vdc. Comes in choice of 22, 30, 36, 43, 44 or 50 x 2 pins.



2-PIECE PC BOARD CONNECTORS
FCN-360

Designed specifically to be mounted on PC boards. The terminals have .1 inch spacing to accommodate the popular printed circuit grid. 3A at 250 Vac. Accommodates wire sizes AWG #23 to #28, depending on type. Receptacles are made with slightly larger openings to help guide the contact pins to instant connection. Available with eyelet terminals, wire-wrap, crimp, straight and right angle. Any combination of plug and receptacle is possible.



FLAT CABLE CONNECTORS
FCN-700

Faster installation, greater dependability and reduced labor costs. .05 center-spaced flat cables of 20 to 60 conductors connected in seconds. 1A at 250 Vac. Accommodates wire sizes AWG #28 stranded or #30 solid. A special locator plate ensures positive cable to cable contact alignment and field proven gold-over-nickel-plated U-contacts provide corrosion resistant, gas tight connections. Unique locking mechanism prevents accidental disconnection from vibration and shock. Snap-action release. The FCN-700 Series comes in choice of vertical, right angle and wire-wrap headers; open or closed covers for both end and through cable applications. Prices range from $1.00 for 10,000 pieces. Slightly higher, depending on model and quantity ordered.

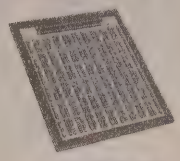
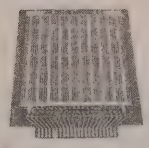
Excel manufactures in-house every standard panel made by Augat and others. They are completely interchangeable in every manner.
Excel manufactures complete ranges of newest versions of ECL and Shottky panels.

ONE SOURCE, ONE INSPECTION, AND ONE COMPANY RESPONSIBLE TO YOU

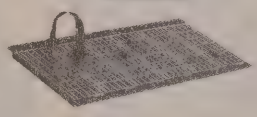
ALL UL APPROVED



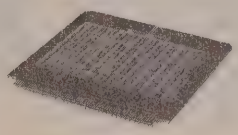
EXCEL SERIES 1000
14+V&G or 16+V&G pin patterns in 30 or 60 positions.



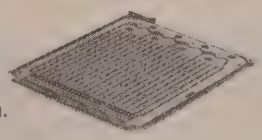
EXCEL SERIES 2000
14+V&G or 16+V&G pin patterns 30 or 60 position.
Gold finger edge connector take off.



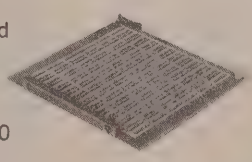
EXCEL SERIES 3000
30 position to 240 position.
Available in all pin patterns including 24 pin. Also universal 50 pin rows. Sockets or feed thrus in I/O areas.



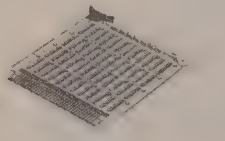
EXCEL SERIES 4000
60 position available in all pin patterns including universal 50 pin rows and also combination 14 and 16 pin patterns.



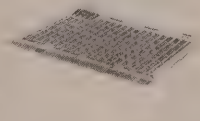
EXCEL SERIES 5000
Edge board connections-provision and hardware for mounting voltage regulators. 20 rows of 62 contacts each.



EXCEL SERIES 6000
Complete range of high density DIP packaging panels in all patterns—60 and 72 positions including 20 rows of universal 50 or 58 contacts. 1/16" or 1/8" thick. Can accommodate IC's with legs centered at .300, .400 and .600.
All panels supplied with high density 120 pin 3 row male .100" centers connector affixed. Female connectors available separately.

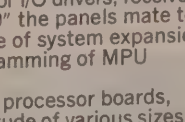


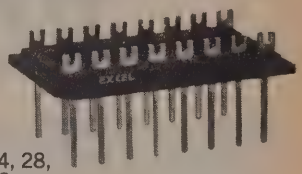
EXCEL SERIES 7000
Series edgeboard 24 position—special sockets and slotted pins for variable voltage and ground and mounting components. 14-16 patterns.



EXCEL SERIES 8000
8430 and 8460 are Mini Panels to interface with Data General's Nova® computers. Series 84A1 and 8532 are Mini Panels to interface with DEC PDP8® and PDP11® computers.

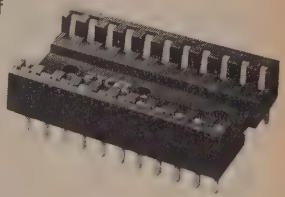
MPU PANEL EXCLUSIVE—
EXCEL SERIES 9000
This is a new family of pluggable panels for Microprocessor kits. Panel #9045-3BD-60 accommodates nearly all MPU kits currently available. Memory panel #9042-3BD-60 accepts any 16 - 18 - 22 or 28 pin LSI, RAM, ROM or PROM in 4K byte increments. Both panels have all necessary provisions for I/O drivers, receivers, buffers and control lines. Measuring 6" x 10" the panels mate to standard 44 pin edge connectors for ease of system expansion during prototyping, evaluating and programming of MPU devices.
For the first time, most requirements for processor boards, memory boards, I/O boards and the multitude of various sizes of panels used for MPU devices, and in the various MPU kits can be condensed into and handled by the two new **Excel** panels.



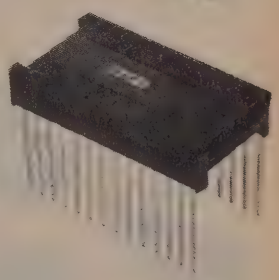


EXCEL SERIES 400
Component leaders 14, 16, 17, 24, 28, 36, 40- glass filled polyester SE-O, Phosphor Bronze, Gold over nickel or bright tin covers available.

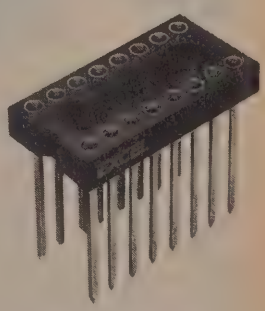
EXCEL SERIES 500
Low Profile. 8-40 pin solder tails, gold over nickel or bright tin plated. Glass filled Polyester SE-O. Beryllium copper holds the edge of IC leg for better contact.



EXCEL SERIES 600
Low Profile. Low cost 8-40 pin solder tail. Gold over nickel or bright tin. Glass filled Polyester SE-O. Beryllium copper holds the flat of the IC leg. End stackable.



EXCEL SERIES 700
Standard Profile. 8-40 pin wire wrap or solder tails. Contact is gold over nickel or bright tin plated Phosphor Bronze. Body is SE-O rated glass filled Polyester. Tapered entry holds the edge of IC leg for best contact.



EXCEL SERIES 800
8-14-16-22-24-28-36-40-42-64
Highest quality available. Precision Swiss screw machine contacts. Wire wrap 1, 2 or 3 levels. Solder tails or component headers. Terminal contact is beryllium copper over nickel, terminal body is brass, gold over nickel or tin plated. Body for 8-14-16 contact is 94V-O rated Polyester for 18-64 body is 94V-O rated FR-4 Glass Epoxy. Very low profile.
Any size custom DIP — available.

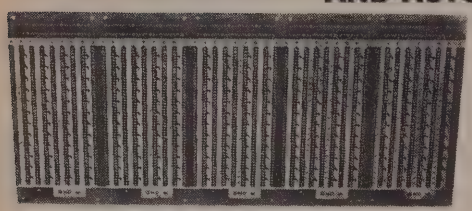
One Source Responsibility for your Packaging Needs

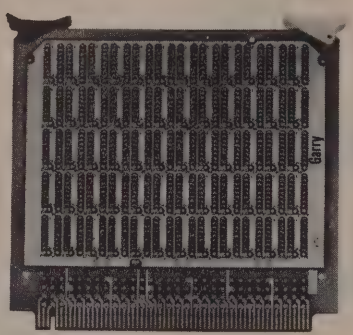
GARRY'S "TOTAL PACKAGING" CONCEPT PUTS IT ALL TOGETHER FOR YOU!

WITH I.C. PLUGGABLE PANELS, LOW PROFILE SOCKETS AND AUTOMATIC WIRE WRAP* MACHINES



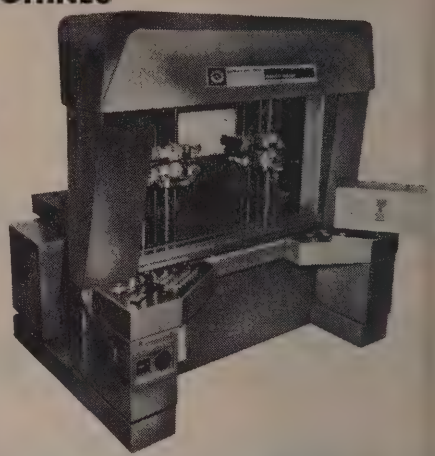
I.C. PLUGGABLE PANELS

Modular series features your choice of 4 I.C. position configurations or universal I.C. position configuration in one section of 30 I.C. positions through 8 sections (240 I.C.'s)



I.C. PLUGGABLE PANELS

Card Edge series offers 12, 16, 24, 30, 60 or 72 positions in your choice of 4 I.C. configuration, plus universal I.C. position configuration and 72 to 120 I-O pins.

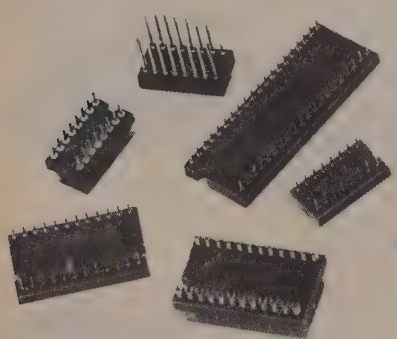


GARRY'S AUTOMATIC WIRE WRAP* MACHINES

Never a Bum Wrap! Think of it. No more scrapped PC boards. (You can actually fix a faulty wire wrap!) No more high inventory costs. No more complicated "doctoring" in the field. No more expensive tooling start-ups. No more headaches because you're "locked into" a PC design.

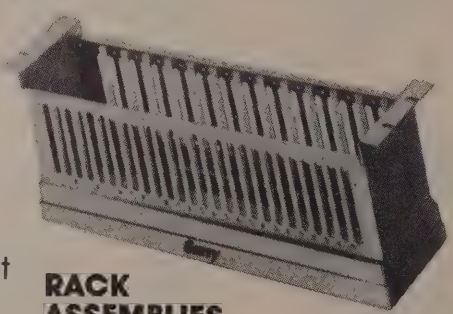
A complete in-house wire-wrap service is also available to give you quick turnaround.

It Never Varies. Our precision beryllium spring clip has the most consistent I.C. insertion-withdrawal ratio in the industry. All this because our facilities are among the world's best.



LOW PROFILE SOCKETS ADAPTORS

Low profile sockets accept standard DIP packages. Machined contact features closed end construction, eliminating solder or flux wicking problem.



RACK ASSEMBLIES

Card racks accept up to 13 boards on 1 .200 centers, or up to 25 boards on .600 centers.

Send for Garry's new free catalog!

Find out why the leading electronics companies use thousands of our wire-wrapped panels each week...

We won't pin a bum wrap on you!

TERMINATION HARDWARE SERIES 2, 22, 29

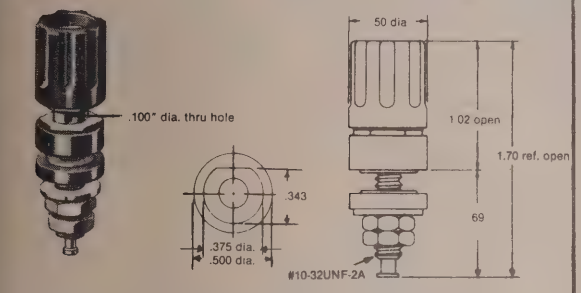
BINDING POSTS

RATING:

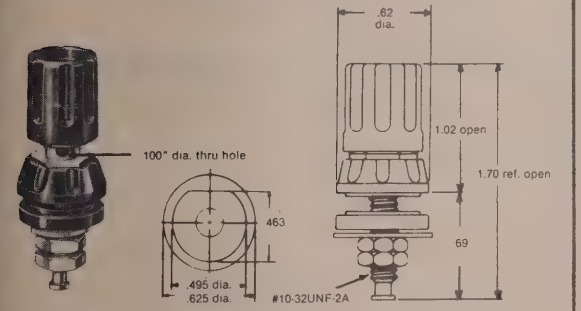
Rating at 120 VDC: 15 amps continuously with a max. temperature rise of 20°C.

Insulation Resistance: Between stud and mounting panel.
No. 29-1: 120,000 megohms. **No. 29-3:** 200,000 megohms.

Voltage Breakdown: Between studs and mounting panel.
No. 29-1: 1500 VAC. **No. 29-3:** 3000 VAC.



29-1 Standard Screw Type Binding Post with Straight Skirt. Fits 3/8" Diameter Mounting Hole Allowing Close Spacing.



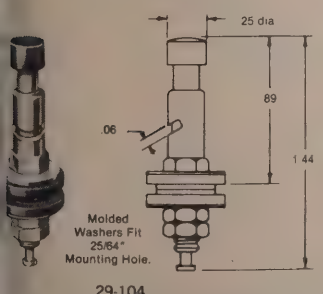
29-3 Standard Screw Type Binding Post with Flared Skirt Fits ½" Diameter Mounting Hole Allowing Wider Spacing.

Dual mounting base for use with 29-1 binding post to assemble two posts on ¼" centers is available. See GRAYHILL Hardware catalog.

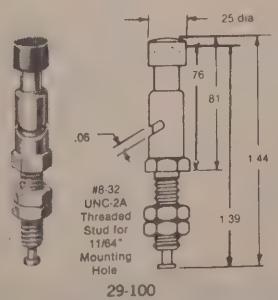
PUSH POST™

New plunger type binding post for positive connections. To operate, button is depressed, lead is placed in slot, and button is released. Spring pressure assures firm positive contact. Extends only 7/8" above mounting board.

Rating at 120 VDC: 20 amps continuously with a max. temperature use of 70°C.



29-104

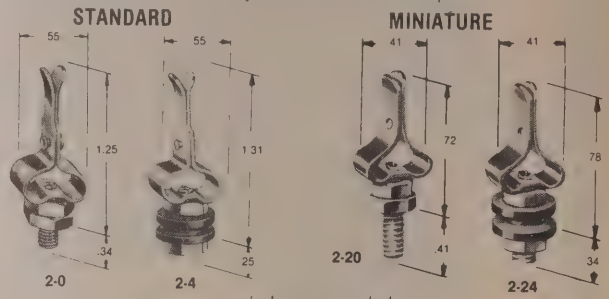


29-100

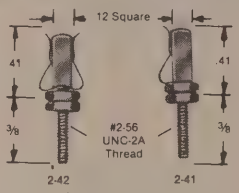
Also available with banana plug. See GRAYHILL Hardware catalog.

TEST CLIPS

Designed for panel mounting on test equipment or for breadboarding to allow rapid connections without manual opening and closing of jaws. Hex nut under clip allows for tension adjustment of individual clip.



ULTRA MINIATURE
PAT. NO. 3,116,101

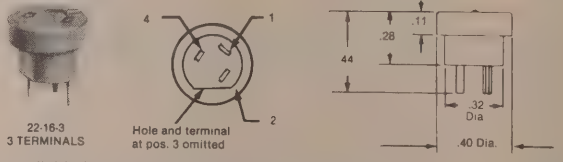


Also available in studless and banana plug versions. See GRAYHILL Hardware catalog.

SOCKETS

TRANSISTOR TYPE

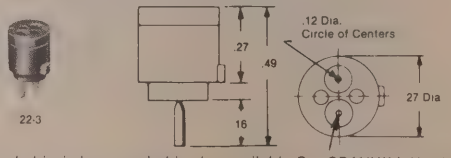
Designed to accept the standard outline (TO-5, 9, 11, 16, 26, 29, 31 & 39). Leads fit on standard 100 mil grid for PC mount or fit a "D" hole to be held by a ring fastener. Wrap around terminals and molded-in indicator line for can tab orientation.



Also available in 4 terminal, different pin to flat orientation and 4 pin, screw or rivet mount. See GRAYHILL Hardware catalog.

BI-PIN LAMP

Accepts standard T-1¼ and T-1¾ outline lamps when leads are trimmed to 0.215". PC mount terminals fit .032" diameter hole.



Right angle bi-pin lamp socket is also available. See GRAYHILL Hardware catalog.

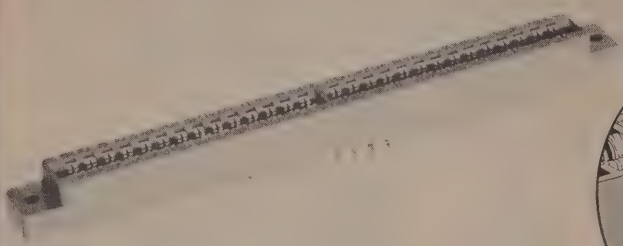
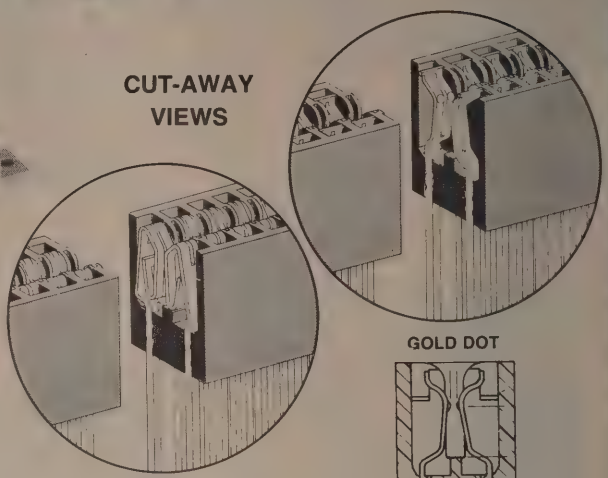
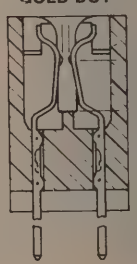
CARD EDGE CONNECTORS



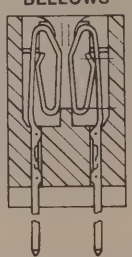
CUT-AWAY VIEWS



GOLD DOT



BELLOWS



FEATURES OF THE GOLD DOT CONTACT

- Bifurcated Gold Dot (contact point) is a coined gold/silver alloy assuring maximum conductivity at the exact point of contact.
- Designed for easy card insertion.
- Discrete contact identification.
- Designed to meet the applicable performance requirements of MIL-C-21097.
- Between-position and on-position polarizing available.
- Economy connector with maximum reliability.
- Multiple mounting styles available, including: thru hole, threaded bushing, and no mounting ear.

FEATURES OF THE BELLOWS CONTACT

- Bifurcated bellows-shaped contact springs provide constant pressure and maximum protection against vibration, corrosion, and repeated card insertion.
- 24 karat gold-plated mating surface assures maximum conductivity and reliability.
- Designed for easy card insertion.
- Discrete contact identification.
- Designed to meet the applicable performance requirements of MIL-C-21097.
- Between-position and on-position polarizing available.
- Multiple mounting styles available, including: thru hole, threaded bushing, and no mounting ear.

GOLD DOT AND BELLOWS CONTACT CONNECTOR SPECIFICATIONS:

- Operating voltage (sea level). . .600v dc.
- Current. . .3 amps.
- Designed to mate with circuit boards from .054(1.372) to .071(1.803) thick.
- Temperature range. . .–85°F(–65°C) to 257°F(125°C).
- Voltage drop not to exceed 30 mv @ rated current.
- Diallyl Phthalate or Phenolic housing materials.
- Phosphor bronze contact material.
- Specifications subject to change. Consult GTE Sylvania Product Specifications for additional technical information.

This is only a sample of the GTE Sylvania connector product line. For additional information or complete catalogue, please write to GTE Sylvania.

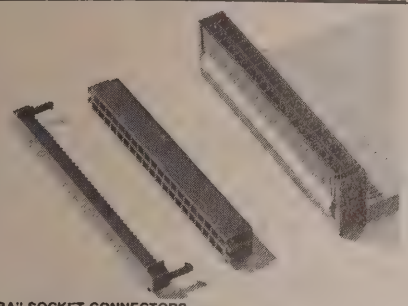
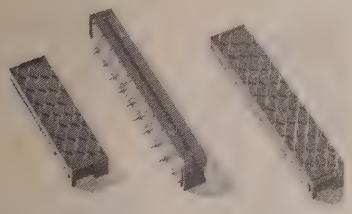
GTE SYLVANIA INCORPORATED

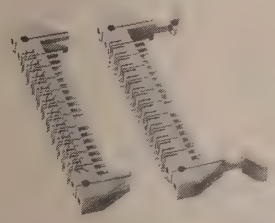
FLAT CABLE CONNECTOR SYSTEMS



"BA" SOCKET CONNECTORS
- Designed to terminate to cable on .050 (1.270) conductor centers.
- Mass insulation displacing concept offers good gas-tight termination.
- Accepts 28-30 AWG solid or stranded conductors
- Designed to mate to .025 (.635) sq. posts or .025 dia. pins
- Positive locking assembly.



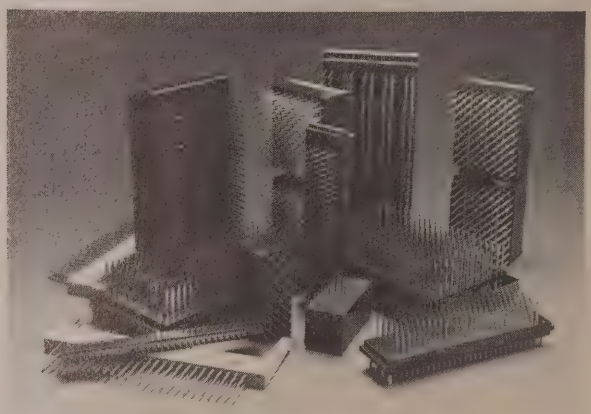
"BC" PCB FLAT CABLE CONNECTORS
- Positive locking assembly.
- Low profile design .255 (6.477) max. height.
- Open or closed cover designs for end-wire or thru-wire applications.
- Optional contact lengths for PC boards up to .125(3.175) thick
- Connector design and termination tooling guarantee uniform reliable interconnections.



"BB" HEADER CONNECTORS
- Low Profile Design - max. height for vertical application is .700 (17.780) not including latch option.
- Designed for solder or wire-wrappable applications.
- Positive latch option.
- Shielded design to protect contacts when disconnected.
- Vertical or right angle applications.

"BD" STACKABLE SOCKET CONNECTORS
- Mass insulation displacing concept, offering good gas-tight seal
- Positive locking assembly.
- Low profile package with maximum height of .275(6.985) permits stacking of two connectors on a typical wire-wrappable post
- Latest concept in interconnect packaging.
- Lowest total applied cost than other I/O (input/output) connector types.

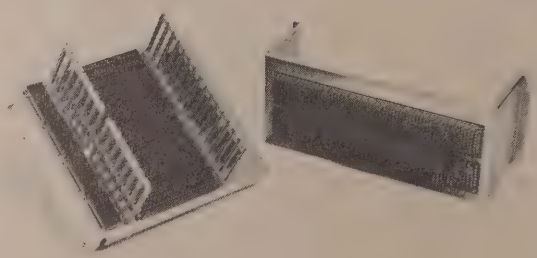
CUSTOM CONNECTORS



Have GTE Sylvania combine its expertise with yours to design a custom connector to your exact specifications.

- Designed to specific customer applications.
- Provide reliable connectors to major industries for over two decades.
- Feature complete material and process control from product concept to customer shipment via total vertical integration.
- Provide highest reliability contact in the industry including the GTE Sylvania proven gold dot.
- Designed to provide the highest possible packaging density.
- Available with both solder tab and wrap-post contact tails.
- Available in wide range of sizes and mounting styles.
- Choice of housing materials.

BACK PANEL ASSEMBLIES



- Backpanel assemblies available complete or in sub-assembly form.
- Made to your exact specifications.
- Over two decades of engineering know-how in backpanel design and manufacture.
- Complete testing capabilities including zero-defect electrical checking for finished assemblies.
- Complete in-house production facilities.
- Panels designed with a wide range of connectors available on .100, .125, .156, or .200 inch centerline spacing.
- Stringent quality control throughout assembly procedure from several in-process stations.

HIRAM JONES

Teflon† Insulated * Press-Type * Terminals and Test Jacks

TEFLON†

TFE-FLUOROCARBON) per MIL-P-19468 has outstanding mechani al and electrical properties over a wide range of frequencies and emperatures (−100°C to +250°C), extreme chemical inertness, igh heat resistance, zero water absorption and complete anti-hesive- ess which make it a superior insulation.

TERMINALS

MATERIAL: Half-hard Brass per QQ-B-626, CDA360.
FINISH: Standard plating is Gold per MIL-G-45204. Other finishes supplied on request.

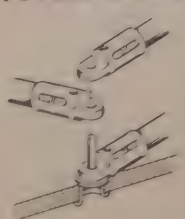
9W WIRE TERMINATION SYSTEM COMPONENTS

NOW AVAILABLE: P/N 9W-208 CRIMP TERMINAL FOR AWG WIRE SIZES NO. 28 & 30

NEW ITEM

FOR BUILT-IN RELIABILITY:
Provides a solder-wicking barrier to minimize wire fatigue failures.

SERVICEABILITY:
Utilizing fast, simple wire connection and disconnection.



9W Crimp Terminal Part No.	O.D.	Lgth.	AWG Wire Sizes	Mating Terminal Post	Board Thickness

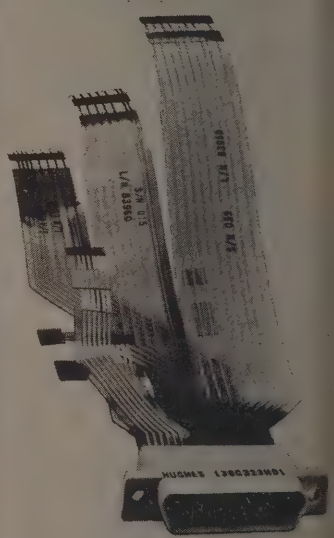
CABLES, CIRCUITS, CONNECTORS – HUGHES PUTS IT ALL TOGETHER.



We're the company that has total interconnection capability—in flat cable, flex circuits and connectors. And we've had more experience designing them for high technology applications.

But we do more than design them to work together—we also put them together for you in special assemblies.

So call the people you can count on. Call us. (714) 549-5701. Or write: 17150 Von Karman Avenue, Irvine, CA 92714.

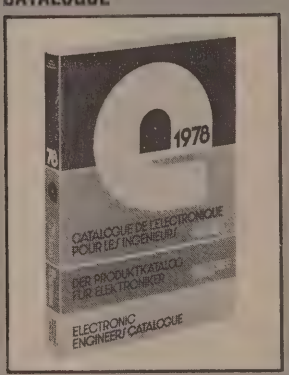
WE KNOW OUR STUFF

41 YEARS OF EXPERIENCE IN CATALOGING, 21 EDITIONS OF eem

eem/ELECTRONIC ENGINEERS MASTER CATALOG —

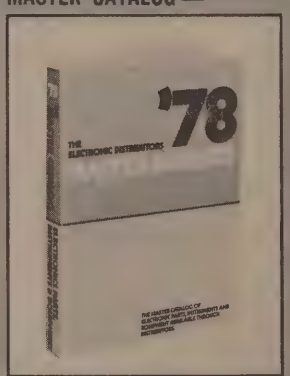
The "blue-ribbon" catalog/directory that has become "the standard of the industry" for electronic engineers, buyers and specifiers.

ELECTRONIC ENGINEERS CATALOGUE



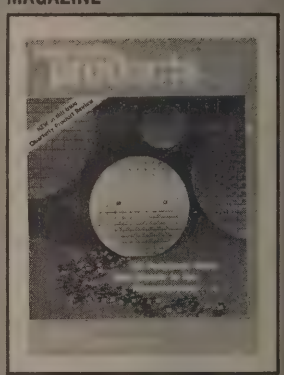
The new catalogue/directory of electronic products available to and from Western Europe and the United Kingdom. Designed especially for the European electronics engineer.

ELECTRONIC DISTRIBUTORS MASTER CATALOG —



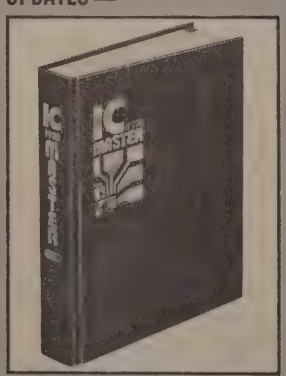
The only national catalog designed exclusively for distributors and their customers featuring electronic parts, instruments and equipment.

ELECTRONIC PRODUCTS MAGAZINE —



The products magazine . . . A 100% product-oriented magazine including hundreds of new products and special features every month.

IC MASTER AND THE UPDATES —



The only complete single-source directory including all IC devices manufactured in the United States. Updated three times yearly with accumulative supplements.

eem FILE SYSTEM —

The only filing system designed especially for the electronics engineer. Instant retrieval and organization of data sheets and catalogs.

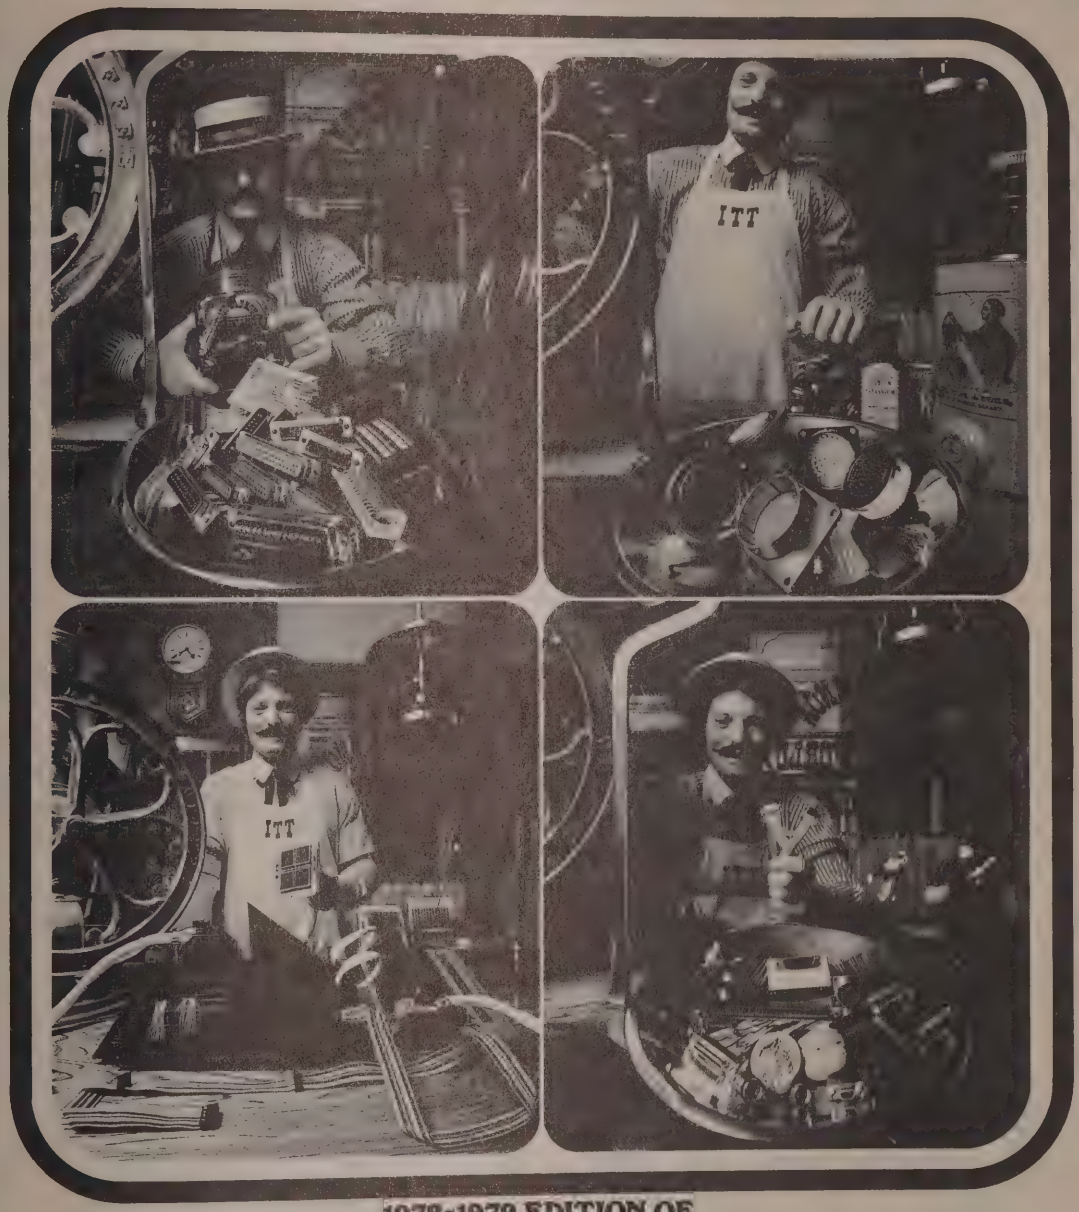
UTP CUSTOM CATALOGS —

The Cadillac of individualized catalogs for the electronic parts distributor, featuring solely his lines and services.

UNITED COST AND PRICING SERVICES —

The electronic distributors' proven method of being up to the minute on his cost and selling prices.

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. 645 Stewart Ave., Garden City, N.Y. 11530 / (516) 222-2500 TWX 510-222-1673



1978-1979 EDITION OF

CANNON STANDARD LINE CONNECTORS

for commercial, industrial, military and aerospace

Six decades on the leading edge of interconnect technology.

CANNON ITT

KJL/KJ Subminiature Circular MIL-C-38999 Connectors — high performance, high contact density, lightweight, bayonet coupling, rear release crimp snap-in contacts 1779

AUDIO Connectors — for audio, electronic and other low-level circuit applications 1791

CV/MIL-C-5015G Standard Circular Connectors — threaded coupling, rear release crimp contacts, intermateable with MIL-C-5015 and MIL-C-83723 (threaded) type connectors 1795

CVA/M83723 (Series II) Standard Circular Connectors — threaded coupling, rear release crimp contacts, environment/fluid resistant, intermateable with MIL-C-5015 type connectors 1802

K Connectors — lightweight, rugged, circular connectors with quick connect/disconnect Acme threads 1810

KPT/KPTM/KPSE Miniature Circular MIL-C-26482 Connectors — general purpose, solder and crimp removable contacts, bayonet coupling 1818

MS-A/MS-B/MS-E/MS-F/ER MIL-C-5015 Standard Circular Connectors — general purpose, threaded coupling, solder and crimp removable contacts 1828

PV Miniature Circular Connectors — designed to M83723 (Series I) and M26482 (Series II), bayonet coupling 1848

SURE-SEAL™ Connectors — low cost, UL/CSA recognized, sealed connectors for automotive/industrial applications 1857

VE Standard Circular Connectors — sealed connectors that meet all the needs of the heavy duty transportation industry 1860

D Subminiature Rectangular Connectors — for commercial/industrial and general military/aerospace MIL-C-24308 applications 1863

DPK Rack/Panel Connectors — high performance, environment-resistant, thermal protection connectors qualified to MIL-C-83723 (USAF) 1899

DPXNA/DPXNE Rack/Panel Connectors — Single, 2-, 3-, 4-gang non-environmental/environmental versions, designed to meet MIL-C-81659 Rev. B 1910

SMA Connectors — for RF and coaxial requirements for commercial and military applications 1917

ADAPTA-CON Connectors — low force receptacle and post interconnections for PC and I/O applications 1921

Mas/Ter - IDC Insulation Displacement Connectors — insulation displacement connector packaging system for telecommunications, computer, industrial control and other applications requiring low cost with high performance, high speed mass termination of contacts . 1929

DL "ZIF" Connectors — designed for commercial/industrial, computer and peripheral equipment; zero mating force via cam actuated contacts 1933

MICROMINIATURE Connectors — rectangular, circular, strip configurations, with MICRO (3 amp), Centi (5 amp) and NANO (1 amp) Twist Pin Contacts* 1941

*Licensed by New Twist

INTRODUCTION

It's almost impossible to find electrical or electronic equipment anywhere in the world that doesn't involve the use of one or more ITT Cannon Electric products. Our interconnection devices are currently solving problems in equipment and systems ranging from computers to cable TV, telecommunications to transportation, vending machines to nuclear reactors, deep space to deep submergence, braking systems for trucks to applications on every commercial aircraft now flying. The result of this is a truly unequalled depth of engineering experience in all phases of interconnection technology.

Through our CAPS® distributors (Cannon Authorized Plug Specialists), we offer customers the world's largest organization of stocking and assembling distributors — with representation in every major electronics center. Having passed the same quality standards we impose on our own assembly operations, these distributors buy component parts and sub-assemblies from our factories, then assemble them to your requirements at their facilities. Thus, they can customize your connectors and save you the cost of inventory. More specialized orders are passed on to our factories where they are expedited by one of the finest computerized production control systems in the world. It all adds up to getting you the right product at the right time. And at the right price.

For more information, please contact your local ITT Cannon representative or distributor. If you have an interconnect problem, we can help you.

KJL-SERIES I SCOOP-PROOF AND KJ-SERIES II LOW PROFILE CONNECTORS... DESIGNED TO MIL-C-38999

- **High contact density**
- **Lightweight/low-profile/scoop proof**
- **Environment-resistant**
- **Operating temperature range from −29°C to +200°C (−85°F to +392°F)**
- **Crimp snap-in contacts in the NEW SUPER CAESAR™ rear release contact retention assembly**

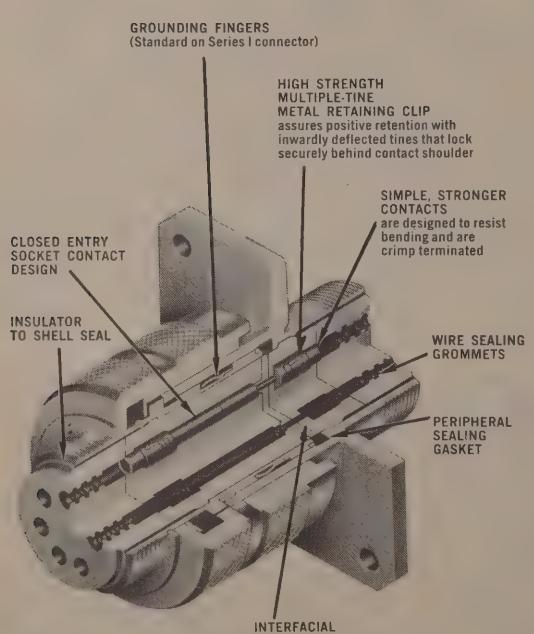
ITT Cannon's KJL and KJ miniature circular connectors are environment-resistant and designed to meet the critical performance and design requirements of MIL-C-38999. Engineered for high density circuitry capabilities, these connectors are designed to operate at temperatures ranging from −29°C to +200°C (−85°F to +392°F). They are readily adaptable to both commercial and space age requirements where size, weight, low-profile/scoop proof design and high reliability are key factors. KJL/KJ connectors are offered in nine shell sizes. A total of 59 contact arrangements are available that will accommodate from 3 to 128 contacts using AWG wire sizes 16 through 28. Contacts are of high conductivity copper alloy with gold plated finish.

The KJL-Series of connectors are designed with a "scoop-proof" feature which provides a safety factor in blind mating applications.

Contact retention is provided by the newly developed SUPER CAESAR™ rear release contact assembly. SUPER CAESAR more than meets the MIL Specs, for contact retention. The assembly features a multiple-tine **metal** retaining clip housed in a monobloc plastic insert. Contacts are inserted, released, and extracted from the rear of the connector, offering lower installation and maintenance costs to the user.

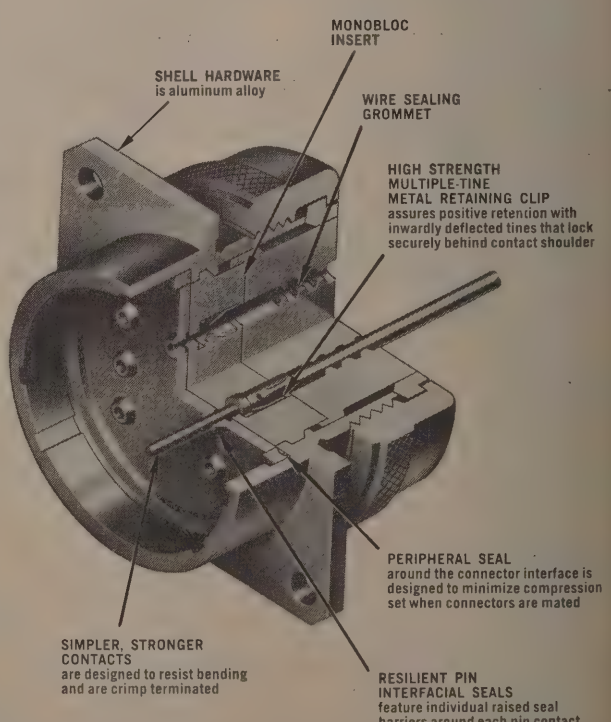
Monobloc (one-piece) inserts are made of strong, durable plastic. Pin contact cavities in the insert are constructed with a closed-down effect. This feature offers superior pin stability and positive axial alignment of the contacts. Lead-in chamfers in the socket front insert face provide for positive contact mating. The shells feature five-keyway shell polarization to assure alignment during engagement. A three-point bayonet lock coupling provides fast connect and disconnect. Complete environmental sealing is accomplished by an interfacial seal, with individual raised tapered sealing barriers around each pin contact; a peripheral seal, and a multiple-ripple wire sealing grommet. Hermetic shell styles are also available.

KJL-SERIES 1



GROUNDING FINGERS
(Standard on Series I connector)
HIGH STRENGTH MULTIPLE-TINE METAL RETAINING CLIP
assures positive retention with inwardly deflected tines that lock securely behind contact shoulder
SIMPLE, STRONGER CONTACTS
are designed to resist bending and are crimp terminated
CLOSED ENTRY SOCKET CONTACT DESIGN
INSULATOR TO SHELL SEAL
WIRE SEALING GROMMETS
PERIPHERAL SEALING GASKET
INTERFACIAL SEAL

KJ-SERIES 2



MONOBLOC INSERT
SHELL HARDWARE
is aluminum alloy
WIRE SEALING GROMMET
HIGH STRENGTH MULTIPLE-TINE METAL RETAINING CLIP
assures positive retention with inwardly deflected tines that lock securely behind contact shoulder
PERIPHERAL SEAL
around the connector interface is designed to minimize compression set when connectors are mated
SIMPLER, STRONGER CONTACTS
are designed to resist bending and are crimp terminated
RESILIENT PIN INTERFACIAL SEALS
feature individual raised seal barriers around each pin contact

ITT CANNON ELECTRIC

AUDIO CONNECTORS

For immediate budgetary information contact your nearest Cannon Sales Office or Distributor (see Manufacturers' Directory).

XLRA/XLR SERIES

XLRA

Newest Audio connector series, available with dual purpose insertable contacts that can be terminated by crimp or solder. Contacts can be supplied in reel or bulk form.

XLR

Similar to XLRA except for factory installed solder termination contacts only. Socket insulator is resilient.

ANNON® Audio connectors are designed for use in audio/video nd other low level circuit applications where reliability, quiet peration, and the elimination of mechanical interference are ecessary. In addition to audio applications, these plugs have ound wide usage in the industrial/electronic field. Common uses nclude microphones, tape recorders, amplifiers, test instruentation, computers, medical instruments, cameras, control evices, and high fidelity systems.

In this catalog the XLRA and XLR Series connectors are shown. Of these two series, the XLRA is the newest, most economical audio connector. The XLRA is available with dual purpose contact terminations that can be **soldered or crimped** at the option of the user (socket side only for the present), while the XLR connector is available in standard solder contact termination.

XLRA FEATURES

- **Most economical advanced design audio connector.**
- **Popular high strength glass-filled nylon insulator provides exceptional dielectric properties.**
- **Latch-lock coupler molded of reinforced plastic.**
- **Contact termination by high speed automatic crimp, hand crimp or solder.**
- **High strength drawn shell with grounding tab.**
- **Polarization accomplished through contact arrangement and polarizing boss and groove.**

LRA/XLR Audio Connectors developed by ITT Cannon Electric eature the most innovative design characteristics: Strong, compact, and streamlined shells with a protective satin finish. Cross ibbing sections increase the inherent shell strength for rugged pplications. Glass-filled nylon insulators provide outstanding ielectric properties and improved shock construction. The XLRA s available in a three-contact arrangement, which accommolates three 10-amp contacts, and also features a shell grounding ab housed in any one of five shell styles. Crimp/solder type ontacts offer the option of high speed automatic crimp, hand rimp, or standard solder termination. For high speed automatic rimp termination contacts are available in reel form. For small uantity usage the same contacts may be terminated by either older or a hand crimp tool. The integral cable clamp used for oth XLRA and XLR provides two clamping positions for a positive rip on cable sizes ranging from 7/32" to 5/16" diameter. Neoprene ushings provide strong cable relief with an internal design to ermit easy cable insertion.

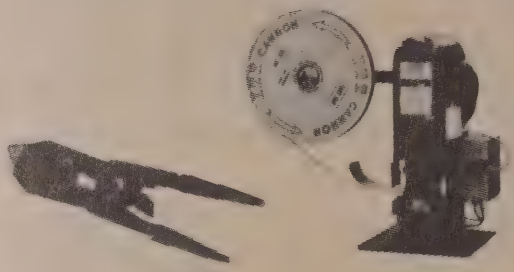
ASSEMBLY & TERMINATION TOOLING DATA



The new XLRA crimp contact is available in reel form for high speed, large volume, automatic termination. ITT Cannon's ABT-606 automatic termination tool is factory equipped with the XLRA die set to insure quality contact terminations. XLRA crimp contacts are also available in individual packaging for hand termination with the CCT-XLRA, for smaller quantity contact terminations.

(millimeters are in parentheses)

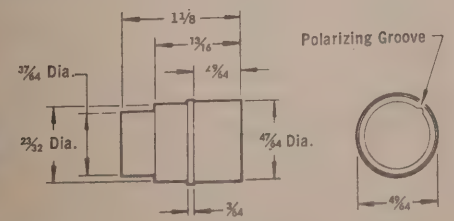
ADAPTER RECEPTACLES

XLR-*-50
Plain shell



Adapter receptacles are for mounting in or onto microphones or other units where they can be adequately supported. They are aluminum with satin nickel finish. Type 50 is a plain shell; type 50N includes a coupling nut to mate with the threaded portion of a microphone unit; and type 50T has a threaded barrel to mate into the equipment. All socket plugs (type 11C, 11SC, and 15) mate with these adapter receptacles.

ACCESSORIES

REPLACEMENT PARTS

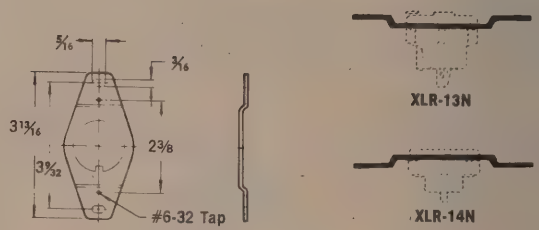
Replacement parts are available for the XLR and XLRA connectors. Contact your local ITT Cannon sales office or distributor for price availability.

FLOOR MOUNTING BRACKETS

XLR series receptacles can be installed in the floor by using a bracket for mounting in a Russell and Stoll floor box number 2503.
The bracket permits the floor mounting of the following receptacles:

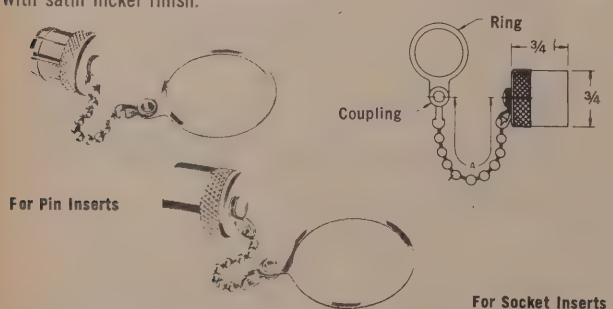
XLR-13N and XLR-14N. (These receptacles are mounted by using different sides of the same bracket. See illustration.)

Part number for this bracket is 015-0094-000.



DUST CAPS

XLR dust caps are furnished with a chain and coupling. The coupling has clearance for a #6 screw for use on wall mounted receptacles. When the plug is a straight cord type, a ring is attached for mounting on the cable relief bushing. When the receptacle is a panel type, a ring is attached for mounting on the shell. Dust caps are brass with satin nickel finish.



Part Number	Used on XLRA/XLR	Type of Mounting	Chain Length A
XLR-11RC	XLR-11C (11SC) -15	Mounted to cable relief bushing .630 +.010 −.002 (16.00 +0.25 −0.05) dia. ring	3 1/4
XLR-12PC	-12C (12SC)		2 15/16
XLR-13RC	-13 -31	Screw mounted coupling has clearance hole for #6 screw	1 13/16
XLR-14PC	-14 -32 -42		1 13/16
XLR-11SRC	-11C (11SC) -13 -15 -31		3 1/4
XLR-12SPC	-12C (12SC) -14 -32 -42		2 15/16
XLR-13N-RC	-13N -35 -35-2G	Shell mounted 1 17/64 dia. ring	2 1/8
XLR-14N-PC	-14N -36 XLR-36-2G		2 1/8 ±3/32

VOLTAGE RATINGS

TEST CONDITIONS: 25°C ambient temperature, 40% relative humidity, 29.7 in. Hg barometric pressure.

METHOD: Sixty-cycle AC sine-wave potential was applied between adjacent contacts and shell in steps of 100 volts, maintaining each step at approximately 80% of the initial flashover value. All values are rms meter readings.

SELECTED VALUES: The safe test potential sustained for one minute on the lowest capacity circuit encountered was selected as the governing value of all circuits in all connectors of similar construction and spacing.

For a quick response to your application needs call one of the following District Offices:

ITT CANNON ELECTRIC

HIGH ENVIRONMENTAL CONNECTORS DESIGNED TO MIL-C-5015G

For immediate budgetary information contact your nearest Cannon Sales Office or Distributor (see Manufacturers' Directory).

STANDARD CIRCULAR HIGH ENVIRONMENTAL CONNECTORS Designed to MIL-C-5015G

The United States Navy Specification MIL-C-5015G (Navy) provides specifications for the connector series covered by this catalog. These connectors are available for many applications, from commercial/industrial and mass transportation systems to the most stringent high reliability military and space requirements.

The MS/CV345* connector manufactured by ITT Cannon Electric to MIL-C-5015G (Navy) is a threaded coupling, removable rear release crimp contact type. Fully intermateable with existing MIL-C-5015 and threaded MIL-C-83723 (USAF) type connectors, they provide for minimum effort and high economy upgrades for existing applications. In addition, they offer simplified design for new and interphase equipment.

MS/CV connectors covered under MIL-C-5015G (Navy) utilize fluid resistant elastomers to provide maximum protection against degrading fuels, oils, coolants and cleansers.

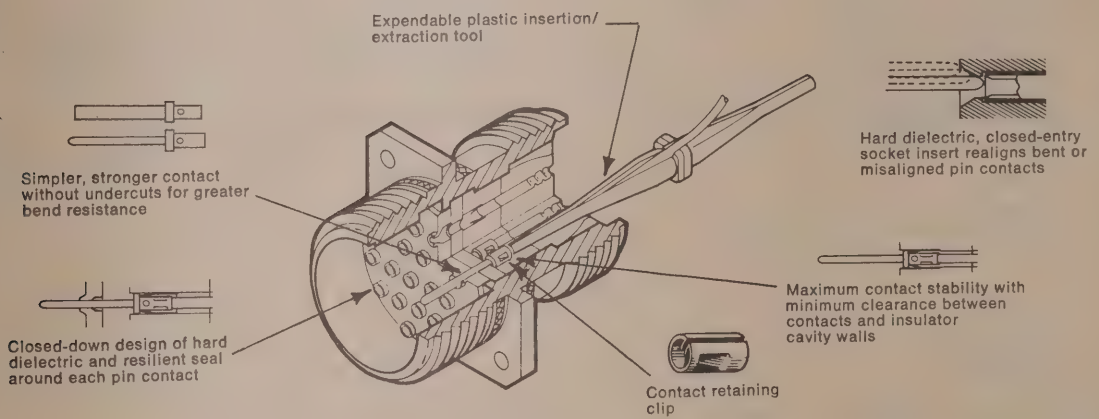
Temperature withstanding capabilities range from −55°C to +200°C depending upon the class. The use of electroless nickel and cadmium plating for hardware finishes gives the connectors maximum protection from the above factors. High quality manufacturing processes and materials combine to insure the optimum in performance and reliability under an extreme range of environmental conditions.

The MS/CV connector manufactured by ITT Cannon Electric is available in four shell styles and 58 contact arrangements accommodating from 1 to 48 contacts (sizes 0, 4, 8, 12 and 16).

This connector series is manufactured to accommodate the following backshells: MS3414, MS3415, MS3416, MS3417, MS-3418 and MS3419.

Shell polarization is effected by a single keyway and key, and standard MS polarization positions are available to prevent mismating.

FEATURES



Expendable plastic insertion/ extraction tool
Hard dielectric, closed-entry socket insert realigns bent or misaligned pin contacts
Simpler, stronger contact without undercuts for greater bend resistance
Maximum contact stability with minimum clearance between contacts and insulator cavity walls
Closed-down design of hard dielectric and resilient seal around each pin contact
Contact retaining clip

1. **Universal Insertion/Extraction Tool Style**—A single, expendable plastic tool is used for insertion and extraction of both pins and sockets. Tool never touches engaging ends of contacts, cannot damage insert.
2. **Simple, Strong Contact Design**—One basic configuration eliminates undercuts, maximizes bend resistance for positive contact mating.
3. **Interfacial Pin Insert Seal**—Universal Interconnect permits design of raised moisture barriers around each pin which mate into lead-in chamfers of hard face socket insert for individual contact sealing. Interfacial seal is never touched by service tools.
4. **Superior Contact Stability**—"Closed-down" design of each contact cavity in the insulator supports each contact, minimizes contact splaying.
5. **Closed Entry Socket Insert**—Hard dielectric socket face of mating connector has lead-in chamfers for positive alignment of pins and sockets.
6. **Simplified Assembly Operations**—One standard procedure for assembling connectors and contacts . . . standard MS crimp tools . . . all servicing of contacts accomplished from the rear of the connector.

CONNECTOR GENERAL CAPABILITIES

Class	Moisture Resistance	Fluid & Fuel Resistance	Operating Temperature	
			Maximum	Minimum
MS345*KT	Yes	Complete	+175°C	−55°C
MS345*L	Yes	Complete	+200°C	−55°C
MS345*W	Yes	Partial	+125°C	−55°C

NOTES: Fluid and fuel resistance definitions are as follows:

Limited: Resistant to hydraulic fluid per MIL-H-5606 and lubricating oil per MIL-L-7808.

Partial: Resistant to hydraulic fluid per MIL-H-5606, lubricating oil per MIL-L-7808, Aerosafe 2300, and Skydrol (LD).

Complete: Resistant to hydraulic fluid per MIL-H-5606 or Skydrol (LD), lubricating oils per MIL-L-7808 and MIL-L-23699, cleaners CeeBee A694 or Aerosafe 2300, jet engine fuel per MIL-J-5624 Grade JP-5, Ethylene Glycol, and Coolanol 25.

TEST DATA

HIGH POTENTIAL TEST VOLTAGE

MS/CV connectors show no evidence of breakdown when the test voltage given below is applied between the two closest contacts and between the shell and the contacts closest to the shell for a period of one minute.

TEST VOLTAGE

Service Rating	Test Voltage (rms) 60 cps	Suggested Operating Voltages* DC	AC (rms)
Inst.	1000	250	200
A	2000	700	500
D	2800	1250	900
E	3500	1750	1250
B	4500	2450	1750
C	7000	4200	3000

*As indicated in previous MS Specification and to be used by the designer only as a guide.

TEST CURRENT

Maximum current ratings of contacts and maximum allowable voltage drop under test conditions when assembled as in service are shown below. Maximum total current to be carried per connector is the same as that allowable in wire bundles as specified in MIL-W-5088.

CURRENT RATING (MIL-C-5015G test method)

Contact Size	Max. Current Rating (amps)	Test Current (amps)	Potential Drop (millivolts)
16	22	13	50
12	41	23	50
8	73	46	25
4	135	80	14
0	245	150	12

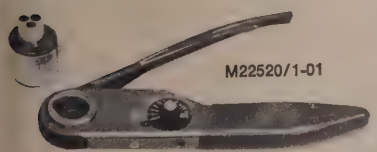
TOOLS



A complete line of crimp, insertion and extraction tools is provided for MIL-C-5015G connectors. Crimp tools are made from high quality metal and are designed for long life and trouble-free service. Insertion and extraction tools are made of a durable plastic and are inexpensive and expendable.

CVA/M83723 (SERIES II)
INTERMATEABLE / INTERMOUNTABLE WITH ALL MIL-C-5015

The United States Air Force specification, MIL-C-83723, USAF Series II, reflects a vastly upgraded, hi-rel version of the MIL-C-5015 type connectors. These connectors are suited for a variety of applications from commercial/industrial to the most stringent, high performance, high reliability military and space applications.

The M83723/CVA connector, manufactured by ITT Cannon Electric, is a threaded coupling, removable rear release crimp contact type which is fully qualified and QPL approved under MIL-C-83723 (USAF). They are fully intermateable/intermountable with all existing MIL-C-5015 connectors.

The removable rear release crimp contact concept utilized by this connector has become the standard design in the military/aerospace and commercial industries. Features such as faster and easier wire termination, use of common termination tooling and minimizing field repair during maintenance are combined to provide a maximum savings in termination and training time.

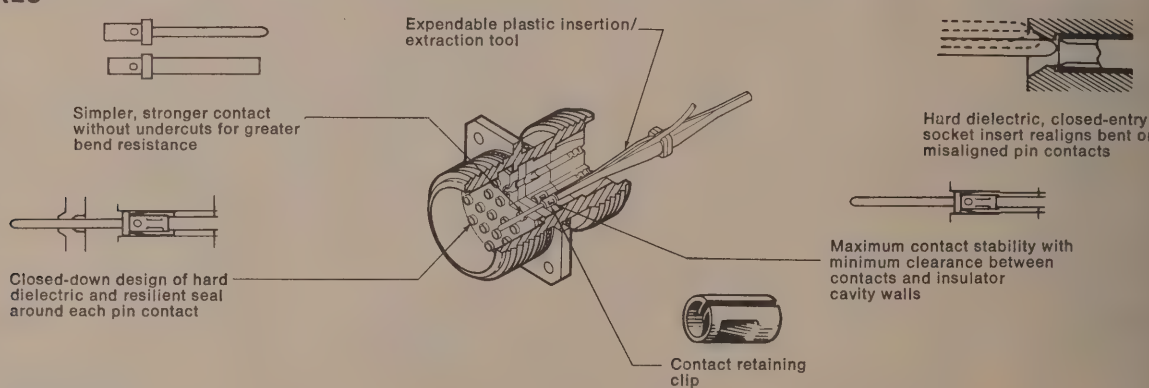
CVA connectors covered under MIL-C-83723 (USAF) utilize fluid resistant elastomers to provide the greatest protection against degradation from a wide variety of fuels, oils, coolants, and cleaning agents. The hardware is finished in electroless nickel to provide for operating temperatures from −55° to +200°C. All materials, finishes and processes used in the manufacture of ITT Cannon's CVA connectors assure the best performance and reliability in the industry for the widest possible range of environmental conditions.

The M83723/CVA connector manufactured by ITT Cannon is available in 4 shell styles and 75 contact arrangements accommodating from 1 to 48 contacts (sizes 0, 4, 8, 12 and 16).

Backshells are available in three configurations for the CVA connector series: straight with strain relief, 90° with strain relief, and straight, short without strain relief. All are fully qualified and QPL-listed under MIL-C-83723 (USAF). **Backshells are not included with the connector and must be ordered separately.**

Shell polarization is effected by a single key and keyway with alternate insert positions available to prevent mismating.

FEATURES



Expendable plastic insertion/ extraction tool
Simpler, stronger contact without undercuts for greater bend resistance
Hard dielectric, closed-entry socket insert realigns bent or misaligned pin contacts
Closed-down design of hard dielectric and resilient seal around each pin contact
Maximum contact stability with minimum clearance between contacts and insulator cavity walls
Contact retaining clip

1. **Universal Insertion/Extraction Tool Style** — A single, expendable plastic tool is used for insertion and extraction of both pins and sockets. Tool never touches engaging ends of contacts, cannot damage insert.
2. **Simple, Strong Contact Design** — One basic configuration eliminates undercuts, maximizes bend resistance for positive contact mating.
3. **Interfacial Pin Insert Seal** — Universal Interconnect permits design of raised moisture barriers around each pin which mate into lead-in chamfers of hard face socket insert for individual contact sealing. Interfacial seal is never touched by service tools.
4. **Superior Contact Stability** — "Closed-down" design of each contact cavity in the insulator supports each contact, minimizes contact splaying.
5. **Closed Entry Socket Insert** — Hard dielectric socket face of mating connector has lead-in chamfers for positive alignment of pins and sockets.
6. **Simplified Assembly Operations** — One standard procedure for assembling connectors and contacts . . . standard MS crimp tools . . . all servicing of contacts accomplished from the rear of the connector.

MILITARY SPECIFICATION CROSS REFERENCE CHART
MIL-C-83723/MIL-C-5015

Shown here are the corresponding MIL-C-83723 slash sheet numbers of those connectors that are equivalent to the MIL-C-5015 connectors.

Replacements For MIL-C-5015	MIL-C-83723 "Slash" Sheet Numbers*		ITT Cannon Equivalent Prefix Designation for MIL-C-83723	Description
	Sockets	Pin		
MS3100/3400/3450	-19	-20	CVA0	Wall Mounting Receptacle
MS3101/3401/3451	-17	-18	CVA1	Cable Mounting Receptacle

GENERAL INFORMATION

Use the Military part number (M83723) when ordering connectors for military use. These M part number connectors have the required acceptance testing for each part lot per Mil Spec requirements. If a military type connector is needed but without the added acceptance testing for each part, yet having "in process" checking, specify the ITT Cannon equivalent part number on the drawing or purchase order.

ELECTRICAL DATA

TEST CURRENT

Maximum current ratings of contacts and maximum allowable voltage drop under test conditions when assembled as in service are shown below. Maximum total current to be carried per connector is the same as that allowable in wire bundles as specified in MIL-W-5088.

HIGH POTENTIAL TEST VOLTAGE

CV connectors show no evidence of breakdown when the test voltage given below is applied between the two closed conacts and between the shell and the contacts closest to the shell for a period of one minute.

Number of Contacts — 1 through 48
WIRE SIZE

Contact Size	Wire Size (MIL-W-16878)	Insul. O.D. Minimum	Limit (inch.) Maximum
16	16 thru 22	.068 (1,73)	.103 (2,62)
12	12 thru 14	.097 (2,46)	.158 (4,01)
8	8 thru 10	.164 (4,17)	.255 (6,48)
4	4 thru 6	.288 (7,32)	.370 (9,40)
0	0 thru 2	.415 (10,54)	.550 (13,97)

CURRENT RATING (MIL-C-5015 Test Method)

Contact Size	Max. Current Rating (amps)	Test Current (amps)	Potential Drop (millivolts)
16	22	20	21
12	41	35	22
8	73	60	46
4	135	110	38
0	245	200	36
